

- Section I Industrial Engineering: Past, Present and Future
- Chapter 1.1 The Purpose and Evolution of Industrial Engineering
- Chapter 1.2 The Role and Career of the Industrial Engineer in the Modern Organization
- Chapter 1.3 Educational Programs for the Industrial Engineer
- Chapter 1.4 The Industrial Engineer as a Manager
- Chapter 1.5 Fundamentals of Industrial Engineering
- Chapter 1.6 The Future of Industrial Engineering: One Perspective
- Chapter 1.7 Future Technologies for the Industrial Engineer
- Chapter 1.8 The Future Directions of Industrial Enterprises
- Chapter 1.9 The Roles of Industrial and Systems Engineering in Large-Scale Organizational Transformations
- Section II Productivity, Performance, and Ethics
- Chapter 2.1 The Concept and Importance of Productivity
- Chapter 2.2 Productivity Improvement Through Business Process Reengineering
- Chapter 2.3 Total Productivity Management
- Chapter 2.4 Performance Management: A Key Role for Supervisors and Team Leaders
- Chapter 2.5 Managing Change Through Teams
- Chapter 2.6 Involvement, Empowerment, and Motivation
- Chapter 2.7 Engineering Ethics: Applications to Industrial Engineering
- Chapter 2.8 Case Study: Productivity Improvement Through Employee Participation
- Chapter 2.9 Case Study: Reducing Labor Costs Using Industrial Engineering Techniques
- Chapter 2.10 Case Study: Teamworking as a Contributor to Global Success
- Chapter 2.11 Case Study: Company Turnaround Using Industrial Engineering Techniques
- Chapter 2.12 Case Study: Improving Response to Customer Demand
- Chapter 2.13 Case Study: Transforming a Company In Central Europe Using Industrial Engineering Methods
- Section III Engineering Economics
- Chapter 3.1 Principles of Engineering Economy and the Capital Allocation Process
- Chapter 3.2 Budgeting and Planning for Profits
- Chapter 3.3 Cost Accounting and Activity-Based Costing
- Chapter 3.4 Product Cost Estimating
- Chapter 3.5 Life Cycle Cost Analysis
- Chapter 3.6 Case Study: Implementing an Activity-Based Costing Program at Auto Parts International
- Section IV Work Analysis and Design
- Chapter 4.1 Methods Engineering and Workplace Design
- Chapter 4.2 Continuous Improvement
- Chapter 4.3 Work Design and Flow Processes for Support Staff
- Chapter 4.4 Setup Time Reduction
- Chapter 4.5 Case Study: Achieving Quick Machine Setups
- Section V Work Measurement and Time Standards
- Chapter 5.1 Measurement of Work
- Chapter 5.2 Purpose and Justification of Engineered Labor Standards

- Chapter 5.3 Standard Data Concepts and Development
- Chapter 5.4 Developing Engineered Labor Standards
- Chapter 5.5 Allowances
- Chapter 5.6 Computerized Labor Standards
- Chapter 5.7 Implementation and Maintenance of Engineered Labor Standards
- Chapter 5.8 Work Measurement in Automated Processes
- Chapter 5.9 Case Study: Automated Standard Setting for Casting and Cast Finishing Operations
- Chapter 5.10 Case Study: Labor Standards for Long-Cycle Jobs in the Aerospace Industry
- Chapter 5.11 Case Study: Staffing a Newspaper Pressroom Operation
- Section VI Ergonomics and Safety
- Chapter 6.1 Ergonomic Information Resources
- Chapter 6.2 Designing, Implementing, and Justifying an Ergonomics Program
- Chapter 6.3 Ergonomic Consumer Product Design
- Chapter 6.4 Manufacturing Ergonomics
- Chapter 6.5 Ergonomics in the Office Environment
- Chapter 6.6 The Interface Between Production System Design and Individual Mechanical Exposure
- Chapter 6.7 Human-Machine System Design and Information Processing
- Chapter 6.8 The Biomechanical Profile of Repetitive Manual Work Routines
- Chapter 6.9 International Environmental Standards Based on ISO 14000
- Chapter 6.10 Occupational Safety Management and Engineering
- Chapter 6.11 Ergonomic Evaluation Tools for Analyzing Work
- Chapter 6.12 Case Studie
