

- Acknowledgments p. xxi
- Preface p. xxiii
- Introduction p. xxvii
- 1 Sun Certification for Enterprise Architect p. 1
  - Widespread Capabilities for Application Development p. 3
  - Java Is the Glue That Binds the Application Development Process p. 4
  - Companies Increasingly Need the Internet to Compete p. 5
  - Challenges of Application Development for the Enterprise p. 6
  - Design Goals of J2EE Architecture p. 9
  - Sun Certified Enterprise Architect Distinguishes the Java Professional p. 12
  - General SCEA Test Preparation Tips p. 17
- 2 Common Architectures and Protocols p. 21
  - Types of Architecture p. 23
  - Architectural Design and Principles p. 27
  - Architectural Terminology p. 33
  - Principles of Architecture p. 36
  - Creating an Architecture Using Distributed Services and J2EE p. 46
  - J2EE APIs and Certification p. 58
  - XML and J2EE p. 60
  - Distributed Programming Services p. 66
  - Given an Architecture Described in Terms of Network Layout, List Benefits and Potential Weaknesses Associated with It p. 70
  - Q&A p. 76
- 3 Object-Oriented Analysis and Design p. 79
  - Analysis and Design of Object-Oriented Architecture p. 80
  - Project Lifecycle p. 82
  - Unified Modeling Language p. 85
  - Q&A p. 113
- 4 Applicability of J2EE Technology p. 121
  - Explain the J2EE Architecture and System Requirements p. 122
  - Explain the Use of Patterns in the J2EE Framework p. 140
  - Describe the Concepts of "Best Practices" and "Guidelines" p. 145
  - Illustrate the Use of J2EE for Workflow p. 148
  - Review Best Practices Applicable for All Tiers p. 158
  - Review Best Practices for the Client Tier p. 159
  - Enumerate the Components and Categories of the Web Tier p. 159
  - Explain How to Apply MVC to the Web Tier p. 160
  - Review the Best Practices for the Presentation Layer p. 160
  - Review the Internationalization and Localization p. 162
  - The EJB Tier p. 163
  - Illustrate When to Use of J2EE Technology Use for Given Situations p. 172
  - Security p. 177
  - Q&A p. 191
- 5 Design Patterns p. 201

- Identify the Benefits of Using Design Patterns p. 203
- Identify the Most Appropriate Design Pattern for a Given Scenario p. 206
- State the Name of a Gamma et al. Design Pattern Given the UML Diagram and/or a Brief Description of the Pattern's Functionality p. 281
- Identify Benefits of a Specified Gamma et al. Design Pattern p. 284
- Identify the Gamma et al. Design Pattern Associated with a Specified J2EE Technology Feature p. 286
- Q&A p. 292
- 6 Legacy Connectivity p. 301
- Introduction to Legacy Connectivity p. 302
- Java Connector Architecture p. 314
- Distinguish Appropriate from Inappropriate Techniques for Providing Access to a Legacy System from Java Technology Code Given an Outline Description of That Legacy System p. 334
- Q&A p. 345
- 7 Enterprise JavaBeans and the EJB Container Model p. 349
- List the Required Classes/Interfaces That Must Be Provided for an Enterprise JavaBeans Component p. 351
- Distinguish Between Session and Entity Beans p. 353
- Recognize Appropriate Uses for Entity, Stateful Session, and Stateless Session Beans p. 355
- Distinguish Between Stateful and Stateless Session Beans p. 356
- State the Benefits and Costs of Container-Managed Persistence p. 407
- State the Transactional Behavior in a Given Scenario for an Enterprise Bean Method with a Specified Transactional Attribute as Defined in the Deployment Descriptor p. 417
- Given a Requirement Specification Detailing Security and Flexibility Needs, Identify Architectures that Would Fulfill Those Requirements p. 421
- Identify Costs and Benefits of Using an Intermediate Data Access Object Between an Entity Bean and the Data Resource p. 429
- State the Benefits of Bean Pooling in an EJB Container p. 430
- Explain How the Enterprise JavaBeans Container Does Lifecycle Management and Has the Capability to Increase Scalability p. 431
- Q&A p. 438
- 8 Messaging p. 447
- Messaging Basics p. 448
- Identify Scenarios That Are Appropriate to Implementation Using Messaging p. 451
- List Benefits of Synchronous and Asynchronous Messaging p. 452
- Identify Scenarios That Are More Appropriate to Implementation Using Asynchronous Messaging, Rather Than Synchronous p. 452
- Identify Scenarios That Are More Appropriate to Implementation Using Synchronous Messaging, Rather Than Asynchronous p. 453
- Java Message Service p. 454
- Identify Scenarios That Are Appropriate to Implementation Using Messaging, Enterprise JavaBeans Technology, or Both p. 480
- Q&A p. 484

- 9 Internationalization and Localization p. 491
- State Three Aspects of Any Application That Might Need to Be Varied or Customized in Different Deployment Locales p. 492
- List Three Features of the Java Programming Language That Can Be Used to Create an Internationalizable/Localizable Application p. 494
- Q&A p. 512
- 10 Security p. 519
- Security p. 520
- Identify Security Restrictions That Java 2 Technology Environments Normally Impose on Applets Running in a Browser p. 523
- Given an Architectural System Specification, Identify Appropriate Locations for Implementation of Specified Security Features and Select Suitable Technologies for Implementation of Those Features p. 525
- Q&A p. 549
- 11 Case Study: Overview of Securities Trading System p. 555
- The Case Study Infrastructure p. 556
- Model and Develop the Case Study p. 560
- Trade System Design and Implementation p. 573
- Glossary p. 583
- A About the CD p. 597
- System Requirements p. 598
- Code on the CD p. 598
- Installing and Running MasterExam p. 598
- MasterExam p. 599
- Electronic Book p. 599
- Help p. 599
- Removing Installation(s) p. 599
- Technical Support p. 599
- LearnKey Technical Support p. 600
- LearnKey Online Training p. 600
- Index p. 601
