

- Preface
- Acknowledgments
- Nomenclature
- 1 Introduction
 - 1.1 Spectroscopic Techniques
 - 1.2 Overview of the Book
 - 1.3 How to Use This Book
 - 1.4 Concluding Remarks and Warnings
- 2 A Brief Review of Statistical Mechanics
 - 2.1 Introduction
 - 2.2 The Maxwellian Velocity Distribution
 - 2.3 The Boltzmann Energy Distribution
 - 2.4 Molecular Energy Distributions
 - 2.5 Conclusions
- 3 The Equation of Radiative Transfer
 - 3.1 Introduction
 - 3.2 Some Definitions
 - 3.2.1 Geometric Terms
 - 3.2.2 Spectral Terms
 - 3.2.3 Relationship to Simple Laboratory Measurements
 - 3.3 Development of the ERT
 - 3.4 Implications of the ERT
 - 3.5 Photon Statistics
 - 3.6 Conclusions
- 4 Optical Electromagnetics
 - 4.1 Introduction
 - 4.2 Maxwell's Equations in Vacuum
 - 4.3 Basic Conclusions from Maxwell's Equations
 - 4.4 Material Interactions
 - 4.5 Brief Mention of Nonlinear Effects
 - 4.6 Irradiance
 - 4.7 Conclusions
- 5 The Lorentz Atom
 - 5.1 Classical Dipole Oscillator
 - 5.2 Wave Propagation Through Transmitting Media
 - 5.3 Dipole Emission
 - 5.3.1 Dipole Emission Formalism
 - 5.3.2 Dipole Radiation Patterns
 - 5.4 Conclusions
- 6 Classical Hamiltonian Dynamics
 - 6.1 Introduction
 - 6.2 Overview of Hamiltonian Dynamics
 - 6.3 Hamiltonian Dynamics and the Lorentz Atom
 - 6.4 Conclusions

- 7 An Introduction to Quantum Mechanics
 - 7.1 Introduction
 - 7.2 Historical Perspective
 - 7.3 Additional Components of Quantum Mechanics
 - 7.4 Postulates of Quantum Mechanics
 - 7.5 Conclusions
- 8 Atomic Spectroscopy
 - 8.1 Introduction
 - 8.2 The One-Electron Atom
 - 8.2.1 Definition of V
 - 8.2.2 Approach to the Schrödinger Equation
 - 8.2.3 Introduction to Selection Rules and Notation
 - 8.2.4 Magnetic Moment
 - 8.2.5 Selection Rules, Degeneracy, and Notation
 - 8.3 Multi-Electron Atoms
 - 8.3.1 Approximation Methods
 - 8.3.2 The Pauli Principle and Spin
 - 8.3.3 The Periodic Table
 - 8.3.4 Angular Momentum Coupling
 - 8.3.5 Selection Rules, Degeneracy, and Notation
 - 8.4 Conclusion
- 9 Molecular Spectroscopy
 - 9.1 Introduction
 - 9.2 Diatomic Molecules
 - 9.2.1 Approach to the Schrödinger Equation
 - 9.2.2 Rotation-Vibration Spectra and Corrections to Simple Models
 - 9.2.3 A Review of Ro-Vibrational Molecular Selection Rules
 - 9.2.4 Electronic Transitions
 - 9.2.5 Electronic Spectroscopy
 - 9.2.6 Selection Rules, Degeneracy, and Notation
 - 9.3 Polyatomic Molecules
 - 9.3.1 Symmetry and Point Groups
 - 9.3.2 Rotation of Polyatomic Molecules
 - 9.3.3 Vibrations of Polyatomic Molecules
 - 9.3.4 Electronic Structure
 - 9.4 Conclusions
- 10 Resonance Response
 - 10.1 Einstein Coefficients
 - 10.1.1 Franck-Condon and HSnl-London factors
 - 10.2 Oscillator Strengths
 - 10.3 Absorption Cross-sections
 - 10.4 Band Oscillator Strengths
 - 10.5 Conclusions
- 11 Line Broadening

- 11.1 Introduction
- 11.2 A Spectral Formalism
- 11.3 General Description of Optical Spectra
- 11.4 Homogeneous Broadening
- 11.5 Inhomogeneous Broadening
- 11.6 Combined Mechanisms: The Voigt Profile
- 11.7 Conclusions
- 12 Polarization
- 12.1 Introduction
- 12.2 Polarization of the Resonance Response
- 12.3 Absorption and Polarization
- 12.4 Polarized Radiant Emission
- 12.5 Photons and Polarization
- 12.6 Conclusions
- 13 Rayleigh and Raman Scattering
- 13.1 Introduction
- 13.2 Polarizability
- 13.3 Classical Molecular Scattering
- 13.4 Rayleigh Scattering
- 13.5 Raman Scattering
- 13.5.1 Raman Flowfield Measurements
- 13.6 Conclusions
- 14 The Density Matrix Equations
- 14.1 Introduction
- 14.2 Development of the DME
- 14.3 Interaction with an Electromagnetic Field
- 14.4 Multiple Levels and Polarization in the DME
- 14.5 Two-level DME in the Steady-state Limit
- 14.6 Conclusions
- A Units
- B Constants
