

- Preface p. xii
- Acknowledgments p. xvii
- 1 Introduction p. 1
- 1.1 Smart Structures p. 3
- 1.2 Brief Historical Overview of Smart Structures p. 9
- 2 Need for Integrated Structural Monitoring p. 15
- 2.1 Introduction p. 15
- 2.2 Civil Engineering Problems p. 17
- 2.3 New Materials for the Construction Industry p. 19
- 2.4 Bridges of Advanced Design p. 21
- 2.5 Detection of Structural Weakness p. 24
- 2.6 Measurement Prospects for Fiber Optic Technology p. 26
- 2.7 Earthquakes and New Materials for Repair p. 34
- 2.8 Other Structural Monitoring Applications p. 40
- 2.9 Wind Power and Structural Monitoring p. 43
- 2.10 Magnetic Levitation Train Monitoring p. 45
- 2.11 Aerospace Engineering Problems p. 46
- 2.12 New Materials for the Aerospace Industry p. 48
- 2.13 Fiber Optic Monitoring of Aircraft p. 50
- 3 Introduction to Lightwaves p. 52
- 3.1 Background and Overview p. 52
- 3.2 Electromagnetic Radiation p. 56
- 3.3 Birefringence and Polarization p. 64
- 3.4 Superposition, Coherence, and Interference p. 69
- 3.5 Partial Coherence and Coherence Length p. 72
- 3.6 High-Coherence Interferometers p. 76
- 3.7 Multipass Fabry-Perot Interferometer p. 79
- 3.8 Low-Coherence Interferometry p. 82
- 3.9 Radiation Coupling Between Optical Fibers p. 86
- 3.10 Bragg Grating Reflection p. 91
- 4 Light Sources and Detectors p. 100
- 4.1 Introduction p. 100
- 4.2 Light Generation and Gain Media p. 100
- 4.3 Fabry-Perot Cavity Lasers p. 107
- 4.4 Semiconductor Radiation Sources p. 116
- 4.5 Light-Emitting Diodes p. 121
- 4.6 Semiconductor Laser Diodes p. 129
- 4.7 Narrowband (DBR and DFB) Laser Diodes p. 138
- 4.8 Junction Photodetectors p. 143
- 4.9 PIN and Avalanche Photodiode Detectors p. 147
- 4.10 Charge-Coupled Detector Arrays p. 150
- 4.11 Photodetector Signal-to-Noise p. 154
- 5 Fiber Optic Technology p. 160
- 5.1 Introduction p. 160
- 5.2 Optical Fibers p. 160
- 5.3 Optical Fiber Guided Wave Modes p. 165

- 5.4 Cutoff Wavelength and Single-Mode Fiber p. 170
- 5.5 Optical Fiber Transmission Properties p. 176
- 5.6 Optical Fiber Strength and Fatigue Life p. 181
- 5.7 Fiber Optic Connectors, Splices, and Pigtails p. 190
- 5.8 Optical Isolators, Couplers, Filters, and Spectral Analyzers p. 201
- 5.9 Fiber Bragg Gratings p. 213
- 5.10 Multiplexing and Demultiplexing p. 224
- 6 Fiber Optic Structural Sensors and Their Merits p. 233
- 6.1 Merits of Fiber Optic Structural Sensors p. 233
- 6.2 Types of Fiber Optic Structural Sensor p. 235
- 6.3 Intensiometric Fiber Optic Sensors p. 237
- 6.4 Interferometric Fiber Optic Sensors p. 243
- 6.5 Polarimetric and Modalmetric Fiber Optic Sensors p. 250
- 6.6 Spectrometric Fiber Optic Sensors p. 252
- 6.7 Selection of a Fiber Optic Structural Sensor p. 260
- 7 Fiber Optic Strain and Temperature Sensitivity p. 263
- 7.1 Introduction p. 263
- 7.2 Opto-thermomechanical Equations p. 265
- 7.3 Strain and Temperature Sensitivity and Gauge Factors p. 267
- 7.4 Transverse Strains and Their Measurement p. 275
- 7.5 Thermal Apparent Strain p. 285
- 7.6 Temperature Compensation for Fiber Optic Sensors p. 288
- 7.7 Temperature-Independent Strain Sensors p. 316
- 7.8 Strain-Temperature Cross-Sensitivity p. 323
- 8 Sensor Installation and Material Integration Issues p. 325
- 8.1 Introduction p. 325
- 8.2 Installation of Fiber Optic Structural Sensors p. 325
- 8.3 Fiber Optic Sensor Integration Within FRP Materials p. 338
- 8.4 The Influence of Fiber Optic Coatings p. 343
- 8.5 Influence of Embedded Optical Fibers on the Host Structure p. 354
- 8.6 Pultruded Fiber Optic Structural Sensors p. 363
- 8.7 Fiber Optic Structural Sensor Connectorization p. 365
- 9 Short Gauge Sensor and Applications p. 369
- 9.1 Introduction p. 369
- 9.2 Fiber Bragg Grating Sensor Demodulation p. 371
- 9.3 Fiber Bragg Grating Sensor Applications p. 403
- 9.4 Interferometric Short-Gauge Structural Sensors p. 449
- 9.5 Interferometric Sensor Applications p. 464
- 10 Long Gauge-Length Fiber Optic Sensing p. 475
- 10.1 Introduction p. 475
- 10.2 Long Gauge-Length Sensors and Their Demodulation p. 478
- 10.3 Long Gauge-Length Sensor Applications p. 494
- 11 Multiplexed Fiber Optic Structural Sensing p. 526
- 11.1 Introduction p. 526
- 11.2 Fabrication of Serial Arrays of Fiber Optic Sensors p. 527
- 11.3 Serial Multiplexing of Fiber Bragg Grating Sensors p. 529

- 11.4 Serial Multiplexed Fiber Bragg Grating Applications p. 567
- 12 Distributed Strain and Temperature Sensing p. 595
 - 12.1 Introduction p. 595
 - 12.2 Fiber Bragg Intragrating Distributed Sensing Concept p. 597
 - 12.3 T-Matrix Formalism for Nonuniform Fiber Bragg Gratings p. 599
 - 12.4 Intensity Reflection Spectrum for Distributed Strain Sensing p. 604
 - 12.5 Distributed Strain Sensing Based on Fourier Transforms p. 611
 - 12.6 Experimental Fourier Transform Distributed Strain Sensing p. 614
 - 12.7 Fourier Transform for Serial Multiplexed Fiber Grating Sensors p. 619
 - 12.8 Low Coherence Techniques for Distributed Sensing p. 623
 - 12.9 Distributed Sensing Under Simulated Brillouin Scattering p. 626
 - 12.10 Distributed Strain Sensing Applications p. 633
- 13 Future Prospects and Summary p. 644
 - 13.1 Overview p. 644
 - 13.2 Fiber Bragg Grating Universal Demodulation System p. 648
 - 13.3 Summary p. 655
- References p. 659
- Index p. 701
