

- 1 Introduction
- Modeling
- Continuous-Time Physical Systems
- Samplers and Discrete-Time Physical Systems
- MATLAB and SIMULINK
- Signals and Systems References
- 2 Continuous-Time Signals and Systems
- Transformations of Continuous-Time Signals
- Signal Characteristics
- Common Signals in Engineering
- Singularity Functions
- Mathematical Functions for Signals
- Continuous-Time Systems
- Properties of Continuous-Time Systems
- 3 Continuous-Time Linear Time-Invariant Systems
- Impulse Representation of Continuous-Time Signals
- Convolution for Continuous-Time LTI Systems
- Properties of Convolution
- Properties of Continuous-Time LTI Systems
- Block Diagrams
- Differential-Equation Models
- Terms in the Natural Response
- System Response for Complex-Exponential Inputs
- 4 Fourier Series
- Approximating Periodic Functions
- Fourier Series
- Fourier Series and Frequency Spectra
- Properties of Fourier Series
- System Analysis
- Fourier Series Transformations
- 5 The Fourier Transform
- Definition of the Fourier Transform
- Properties of the Fourier Transform
- Fourier Transforms of Time Functions
- Fourier Transforms of Sampled Signals
- Application of the Fourier Transform
- Energy and Power Density Spectra
- 6 Applications of the Fourier Transform
- Ideal Filters
- Real Filters
- Bandwidth Relationships
- Reconstruction of Signals from Sample Data
- Sinusoidal Amplitude Modulation
- Pulse-Amplitude Modulation
- Laplace Transforms of Functions
- 7 The Laplace Transform

- Definitions of Laplace Transforms
- Examples
- Laplace Transform Properties
- Additional Properties
- Response of LTI Systems
- LTI Systems Characteristics
- Bilateral Laplace Transform
- Relationship of the Laplace Transform to the Fourier Transform
- 8 State Variables for Continuous-Time Systems
 - State-Variable Modeling
 - Simulation Diagrams
 - Transfer Functions
 - Solution of State Equations
 - Properties of the State Transition Matrix
 - Similarity Transformations
- 9 Discrete-Time Signals and Systems
 - Discrete-Time Signals and Systems
 - Transformations of Discrete-Time Signals
 - Characteristics of Discrete-Time Signals
 - Common Discrete-Time Signals
 - Discrete-Time Systems
 - Properties of Discrete-Time Systems
- 10 Discrete-Time Linear Time-Invariant Systems
 - Impulse Representation of Discrete-Time Signals
 - Convolution for Discrete-Time LTI Systems
 - Properties of Discrete-Time LTI Systems
 - Difference-Equation Models
 - Terms in the Natural Response
 - Block Diagrams
 - System Response for Complex-Exponential Inputs
- 11 The z-Transform
 - Definitions of z-Transforms
 - Examples
 - z-Transforms of Functions
 - z-Transform Properties
 - Additional Properties
 - LTI System Applications
 - Bilateral z-Transform
- 12 Fourier Transforms of Discrete-Time Signals
 - Discrete-Time Fourier Transform
 - Properties of the Discrete-Time Fourier Transform
 - Discrete-Time Fourier Transform
 - Discrete Fourier Transform
 - Fast Fourier Transform
 - Applications of the Discrete Fourier Transform
 - The Discrete Cosine Transform

- Solution of State Equations
- 13 State Variables for Discrete-Time Systems
- State-Variable Modeling
- Simulation Diagrams
- Properties of the State Transition Matrix
- Transfer Functions
