

- Preface p. xix
- 1 Introduction to Wireless Communication Systems p. 1
- 1.1 Evolution of Mobile Radio Communications p. 1
- 1.2 Mobile Radiotelephony in the U.S. p. 4
- 1.3 Mobile Radio Systems Around the World p. 6
- 1.4 Examples of Wireless Communication Systems p. 9
- 1.5 Trends in Cellular Radio and Personal Communications p. 20
- 1.6 Problems p. 22
- 2 Modern Wireless Communication Systems p. 25
- 2.1 Second Generation (2G) Cellular Networks p. 26
- 2.2 Third Generation (3G) Wireless Networks p. 34
- 2.3 Wireless Local Loop (WLL) and LMDS p. 40
- 2.4 Wireless Local Area Networks (WLANs) p. 46
- 2.5 Bluetooth and Personal Area Networks (PANs) p. 52
- 2.6 Summary p. 54
- 2.7 Problems p. 55
- 3 The Cellular Concept--System Design Fundamentals p. 57
- 3.1 Introduction p. 57
- 3.2 Frequency Reuse p. 58
- 3.3 Channel Assignment Strategies p. 62
- 3.4 Handoff Strategies p. 62
- 3.5 Interference and System Capacity p. 67
- 3.6 Trunking and Grade of Service p. 77
- 3.7 Improving Coverage and Capacity in Cellular Systems p. 86
- 3.8 Summary p. 96
- 3.9 Problems p. 97
- 4 Mobile Radio Propagation: Large-Scale Path Loss p. 105
- 4.1 Introduction to Radio Wave Propagation p. 105
- 4.2 Free Space Propagation Model p. 107
- 4.3 Relating Power to Electric Field p. 110
- 4.4 The Three Basic Propagation Mechanisms p. 113
- 4.5 Reflection p. 114
- 4.6 Ground Reflection (Two-Ray) Model p. 120
- 4.7 Diffraction p. 126
- 4.8 Scattering p. 135
- 4.9 Practical Link Budget Design Using Path Loss Models p. 138
- 4.10 Outdoor Propagation Models p. 145
- 4.11 Indoor Propagation Models p. 157
- 4.12 Signal Penetration into Buildings p. 166
- 4.13 Ray Tracing and Site Specific Modeling p. 167
- 4.14 Problems p. 168
- 5 Mobile Radio Propagation: Small-Scale Fading and Multipath p. 177
- 5.1 Small-Scale Multipath Propagation p. 177
- 5.2 Impulse Response Model of a Multipath Channel p. 181

- 5.3 Small-Scale Multipath Measurements p. 192
- 5.4 Parameters of Mobile Multipath Channels p. 197
- 5.5 Types of Small-Scale Fading p. 205
- 5.6 Rayleigh and Ricean Distributions p. 210
- 5.7 Statistical Models for Multipath Fading Channels p. 214
- 5.8 Theory of Multipath Shape Factors for Small-Scale Fading Wireless Channels p. 229
- 5.9 Summary p. 247
- 5.10 Problems p. 248
- 6 Modulation Techniques for Mobile Radio p. 255
- 6.1 Frequency Modulation vs. Amplitude Modulation p. 256
- 6.2 Amplitude Modulation p. 257
- 6.3 Angle Modulation p. 264
- 6.4 Digital Modulation--an Overview p. 277
- 6.5 Line Coding p. 282
- 6.6 Pulse Shaping Techniques p. 282
- 6.7 Geometric Representation of Modulation Signals p. 291
- 6.8 Linear Modulation Techniques p. 294
- 6.9 Constant Envelope Modulation p. 311
- 6.10 Combined Linear and Constant Envelope Modulation Techniques p. 322
- 6.11 Spread Spectrum Modulation Techniques p. 329
- 6.12 Modulation Performance in Fading and Multipath Channels p. 339
- 6.13 Problems p. 350
- 7 Equalization, Diversity, and Channel Coding p. 355
- 7.1 Introduction p. 355
- 7.2 Fundamentals of Equalization p. 356
- 7.3 Training A Generic Adaptive Equalizer p. 359
- 7.4 Equalizers in a Communications Receiver p. 363
- 7.5 Survey of Equalization Techniques p. 364
- 7.6 Linear Equalizers p. 366
- 7.7 Nonlinear Equalization p. 368
- 7.8 Algorithms for Adaptive Equalization p. 372
- 7.9 Fractionally Spaced Equalizers p. 380
- 7.10 Diversity Techniques p. 380
- 7.11 RAKE Receiver p. 391
- 7.12 Interleaving p. 393
- 7.13 Fundamentals of Channel Coding p. 394
- 7.14 Block Codes and Finite Fields p. 395
- 7.15 Convolutional Codes p. 407
- 7.16 Coding Gain p. 411
- 7.17 Trellis Coded Modulation p. 412
- 7.18 Turbo Codes p. 412
- 7.19 Problems p. 412
- 8 Speech Coding p. 415
- 8.1 Introduction p. 415

- 8.2 Characteristics of Speech Signals p. 417
- 8.3 Quantization Techniques p. 418
- 8.4 Adaptive Differential Pulse Code Modulation (ADPCM) p. 423
- 8.5 Frequency Domain Coding of Speech p. 425
- 8.6 Vocoders p. 429
- 8.7 Linear Predictive Coders p. 431
- 8.8 Choosing Speech Codecs for Mobile Communications p. 436
- 8.9 The GSM Codec p. 440
- 8.10 The USDC Codec p. 442
- 8.11 Performance Evaluation of Speech Coders p. 442
- 8.12 Problems p. 445
- 9 Multiple Access Techniques for Wireless Communications p. 447
- 9.1 Introduction p. 447
- 9.2 Frequency Division Multiple Access (FDMA) p. 449
- 9.3 Time Division Multiple Access (TDMA) p. 453
- 9.4 Spread Spectrum Multiple Access p. 456
- 9.5 Space Division Multiple Access (SDMA) p. 461
- 9.6 Packet Radio p. 462
- 9.7 Capacity of Cellular Systems p. 469
- 9.8 Problems p. 488
- 10 Wireless Networking p. 491
- 10.1 Introduction to Wireless Networks p. 491
- 10.2 Differences Between Wireless and Fixed Telephone Networks p. 493
- 10.3 Development of Wireless Networks p. 497
- 10.4 Fixed Network Transmission Hierarchy p. 501
- 10.5 Traffic Routing in Wireless Networks p. 502
- 10.6 Wireless Data Services p. 506
- 10.7 Common Channel Signaling (CCS) p. 510
- 10.8 Integrated Services Digital Network (ISDN) p. 512
- 10.9 Signaling System No. 7 (SS7) p. 514
- 10.10 An Example of SS7--Global Cellular Network Interoperability p. 520
- 10.11 Personal Communication Services/Networks (PCS/PCNs) p. 522
- 10.12 Protocols for Network Access p. 527
- 10.13 Network Databases p. 529
- 10.14 Universal Mobile Telecommunication System (UMTS) p. 530
- 10.15 Summary p. 531
- 11 Wireless Systems and Standards p. 533
- 11.1 AMPS and ETACS p. 533
- 11.2 United States Digital Cellular (IS-54 and IS-136) p. 541
- 11.3 Global System for Mobile (GSM) p. 549
- 11.4 CDMA Digital Cellular Standard (IS-95) p. 567
- 11.5 CT2 Standard for Cordless Telephones p. 580
- 11.6 Digital European Cordless Telephone (DECT) p. 582
- 11.7 PACS--Personal Access Communication Systems p. 587

- 11.8 Pacific Digital Cellular (PDC) p. 590
- 11.9 Personal Handyphone System (PHS) p. 590
- 11.10 US PCS and ISM Bands p. 591
- 11.11 US Wireless Cable Television p. 593
- 11.12 Summary of Standards Throughout the World p. 594
- 11.13 Problems p. 597
- Appendices
- A Trunking Theory p. 601
- B Noise Figure Calculations for Link Budgets p. 611
- C Rate Variance Relationships for Shape Factor Theory p. 615
- D Approximate Spatial Autocovariance Function for Shape Factor Theory p. 619
- E Gaussian Approximations for Spread Spectrum CDMA p. 621
- F Q, erf and erfc Functions p. 645
- G Mathematical Tables, Functions, and Transforms p. 651
- H Abbreviations and Acronyms p. 661
- I References p. 675
- Index p. 693
