

Table of Contents

- 1 Introduction to Process Design
- I Preliminary Analysis and Evaluation of Processes
- 2 Overview of Flowsheet Synthesis
- 3 Mass and Energy Balances
- 4 Equipment Sizing and Costing
- 5 Economic Evaluation
- 6 Design and Scheduling of Batch Processes
- II Analysis With Rigorous Process Models
- 7 Unit Equation Models
- 8 General Concepts of Simulation for Process Design
- 9 Process Flowsheet Optimization
- III Basic Concepts in Process Synthesis
- 10 Heat and Power Integration
- 11 Ideal Distillation Systems
- 12 Heat Integrated Distillation Processes
- 13 Geometric Techniques for the Synthesis of Reactor Networks
- 14 Separating Azeotropic Mixtures
- IV Optimization Approaches to Process Synthesis and Design
- 15 Basic Concepts for Algorithmic Methods
- 16 Synthesis of Heat Exchanger Networks
- 17 Synthesis of Distillation Sequences
- 18 Simultaneous Optimization and Heat Integration
- 19 Optimization Techniques for Reactor Network Synthesis
- 20 Structural Optimization of Process Flowsheets
- 21 Process Flexibility
- 22 Optimal Design and Scheduling for Multiproduct Batch Plants
- References
- Exercises
- Appendix A Summary of Optimization Theory and Methods
- Appendix B Smooth Approximations for $\max \{0, f(x)\}$
- Appendix C Computer Tools for Preliminary Process Design
- Author Index
- Subject Index
