- Preface p. vii
- 1. UNIX for Beginners p. 1
- 1.1 Getting started p. 2
- 1.2 Day-to-day use: files and common commands p. 11
- 1.3 More about files: directories p. 21
- 1.4 The shell p. 26
- 1.5 The rest of the UNIX system p. 38
- 2. The File System p. 41
- 2.1 The basics of files p. 41
- 2.2 What's in a file? p. 46
- 2.3 Directories and filenames p. 48
- 2.4 Permissions p. 52
- 2.5 Inodes p. 57
- 2.6 The directory hierarchy p. 63
- 2.7 Devices p. 65
- 3. Using the Shell p. 71
- 3.1 Command line structure p. 71
- 3.2 Metacharacters p. 74
- 3.3 Creating new commands p. 80
- 3.4 Command arguments and parameters p. 82
- 3.5 Program output as arguments p. 86
- 3.6 Shell variables p. 88
- 3.7 More on I/O redirection p. 92
- 3.8 Looping in shell programs p. 94
- 3.9 bundle: putting it all together p. 97
- 3.10 Why a programmable shell? p. 99
- 4. Filters p. 101
- 4.1 The grep family p. 102
- 4.2 Other filters p. 106
- 4.3 The stream editor sed p. 108
- 4.4 The awk pattern scanning and processing language p. 114
- 4.5 Good files and good filters p. 130
- 5. Shell Programming p. 133
- 5.1 Customizing the cal command p. 133
- 5.2 Which command is which? p. 138
- 5.3 While and until loops: watching for things p. 144
- 5.4 Traps: catching interrupts p. 150
- 5.5 Replacing a file: overwrite p. 152
- 5.6 Zap: killing proceses by name p. 156
- 5.7 The pick command: blanks vs. arguments p. 159
- 5.8 The news command: community service messages p. 162
- 5.9 Get and put: tracking file changes p. 165
- 5.10 A look back p. 169
- 6. Programming with Standard I/O p. 171

- 6.1 Standard input and output: vis p. 172
- 6.2 Program arguments: vis version 2 p. 174
- 6.3 File access: vis version 3 p. 176
- 6.4 A screen-at-a-time printer: p p. 180
- 6.5 An example: pick p. 186
- 6.6 On bugs and debugging p. 187
- 6.7 An example: zap p. 190
- 7.3 File system: inodes p. 214
- 6.8 An interactive file comparison program: idiff p. 192
- 6.9 Accessing the environment p. 199
- 7. UNIX System Calls p. 201
- 7.1 Low-level I/O p. 201
- 7.2 File system: directories p. 208
- 7.4 Processes p. 220
- 7.5 Signals and interrupts p. 225
- 8. Program Development p. 233
- 8.1 Stage 1: A four-function calculator p. 234
- 8.2 Stage 2: Variables and error recovery p. 242
- 8.3 Stage 3: Arbitrary variable names; built-in functions p. 245
- 8.4 Stage 4: Compilation into a machine p. 258
- 8.5 Stage 5: Control flow and relational operators p. 266
- 8.6 Stage 6: Functions and procedures; input/output p. 273
- 8.7 Performance evaluation p. 284
- 8.8 A look back p. 286
- 9. Document Preparation p. 289
- 9.1 The ms macro package p. 290
- 9.2 The troff level p. 297
- 9.3 The tbl and eqn preprocessors p. 301
- 9.4 The manual page p. 308
- 9.5 Other document preparation tools p. 313
- 10. Epilog p. 315
- Appendix 1 Editor Summary p. 319
- Appendix 2 hoc Manual p. 329
- Appendix 3 hoc Listing p. 335
- Index p. 349
