

- Chapter 1 Overview of Mixed-Signal Testing
  - 1.1 Mixed-Signal Circuits
  - 1.2 Why Test Mixed-Signal Devices
  - 1.3 Post-Silicon Production Flow
  - 1.4 Test and Diagnostic Equipment
  - 1.5 New Product Development
  - 1.6 Mixed-Signal Testing Challenges
- Chapter 2 The Test Specification Process
  - 2.1 Device Data Sheets
  - 2.2 Generating the Test Plan
  - 2.3 Components of a Test Program
  - 2.4 Summary
- Chapter 3 DC and Parametric Measurements
  - 3.1 Continuity
  - 3.2 Leakage Currents
  - 3.3 Power Supply Currents
  - 3.4 DC References and Regulators
  - 3.5 Impedance Measurements
  - 3.6 DC Offset Measurements
  - 3.7 DC Gain Measurements
  - 3.8 DC Power Supply Rejection Ratio
  - 3.9 DC Common Mode Rejection Ratio
  - 3.10 Comparator DC Tests
  - 3.11 Voltage Search Techniques
  - 3.12 DC Tests for Digital Circuits
  - 3.13 Summary
- Chapter 4 Measurement Accuracy
  - 4.1 Terminology
  - 4.2 Calibrations and Checkers
  - 4.3 Dealing with Measurement Error
  - 4.4 Basic Data Analysis
  - 4.5 Summary
- Chapter 5 Tester Hardware
  - 5.1 Mixed-Signal Tester Overview
  - 5.2 DC Resources
  - 5.3 Digital Subsystem
  - 5.4 AC Source and Measurement
  - 5.5 Time Measurement System
  - 5.6 Computing Hardware
  - 5.7 Summary
- Chapter 6 Sampling Theory
  - 6.1 Analog Measurements Using DSP
  - 6.2 Sampling and Reconstruction
  - 6.3 Repetitive Sample Sets
  - 6.4 Synchronization of Sampling Systems
  - 6.5 Summary

- Chapter 7 DSP-Based Testing
- 7.1 Advantages of DSP-Based Testing
- 7.2 Digital Signal Processing
- 7.3 Discrete-Time Transforms
- 7.4 The Inverse FFT
- 7.5 Summary
- Chapter 8 Analog Channel Testing
- 8.1 Overview
- 8.2 Gain and Level Tests
- 8.3 Phase Tests
- 8.4 Distortion Tests
- 8.5 Signal Rejection Tests
- 8.6 Noise Tests
- 8.7 Simulation of Analog Channel Tests
- 8.8 Summary
- Chapter 9 Sampled Channel Testing
- 9.1 Overview
- 9.2 Sampling Considerations
- 9.3 Encoding and Decoding
- 9.4 Sampled Channel Tests
- 9.5 Summary
- Chapter 10 Focused Calibrations
- 10.1 Overview
- 10.2 DC Calibrations
- 10.3 AC Amplitude Calibrations
- 10.4 Other AC Calibrations
- 10.5 Error Cancellation Techniques
- 10.6 Summary
- Chapter 11 DAC Testing
- 11.1 Basics of Converter Testing
- 11.2 Basic DC Tests
- 11.3 Transfer Curve Tests
- 11.4 Dynamic DAC Tests
- 11.5 DAC Architectures
- 11.6 Summary
- Chapter 12 ADC Testing
- 12.1 ADC Testing Versus DAC Testing
- 12.2 ADC Code Edge Measurements
- 12.3 DC Tests and Transfer Curve Tests
- 12.4 Dynamic ADC Tests
- 12.5 ADC Architectures
- 12.6 Tests for Common ADC Applications
- 12.7 Summary
- Chapter 13 DIB Design
- 13.1 DIB Basics
- 13.2 Printed Circuit Boards (PCBS)

- 13.3 DIB Traces, Shields, and Guards
- 13.4 Transmission Lines
- 13.5 Grounding and Power Distribution
- 13.6 DIB Components
- 13.7 Common DIB Circuits
- 13.8 Common DIB Mistakes
- 13.9 Summary
- Chapter 14 Design for Test (DfT)
- 14.1 Overview
- 14.2 Advantages of DfT
- 14.3 Digital Scan
- 14.4 Digital BIST
- 14.5 Digital DfT for Mixed-Signal Circuits
- 14.6 Mixed-Signal Boundary Scan and BIST
- 14.7 Ad Hoc Mixed-Signal DfT
- 14.8 Subtle Forms of Analog DfT
- 14.9 IDDQ
- 14.10 Summary
- Chapter 15 Data Analysis
- 15.1 Introduction to Data Analysis
- 15.2 Data Visualization Tools
- 15.3 Statistical Analysis
- 15.4 Statistical Process Control (SPC)
- 15.5 Summary
- Chapter 16 Test Economics
- 16.1 Profitability Factors
- 16.2 Direct Testing Costs
- 16.3 Debugging Skills
- 16.4 Emerging Trends
- 16.5 Summary
