

- The entrance fee
- 1 Floating numbers
- 2 A flavour of numerical analysis
- 3 Algebraic preliminaries
- II Polynomial and trigonometric approximation
- 4 Interpolation and divided differences
- 5 Least-squares approximation for polynomials
- 6 Splines
- 7 Fourier's world
- 8 Quadrature
- III Numerical linear algebra
- 9 Gauss's world
- 10 Theoretical interlude
- 11 Iterations and recurrence
- 12 Pythagoras' world
- IV Nonlinear problems
- 13 Spectra
- 14 Nonlinear equations and systems
- 15 Solving differential systems
- 16 Single-step schemes
- 17 Linear multistep schemes
- 18 Toward Partial differential equations
