

- **List of contributors** (p. ix)
- **List of abbreviations** (p. xi)
- **1 Studying neuronal function using the Drosophila genetic system** (p. 1)
- **3 Gene expression: from precursor to mature neuron** (p. 29)
- **6 Molecular biology of transmitter release** (p. 139)
- **11 Signalling by tyrosine phosphorylation in the nervous system** (p. 267)
- **16 Ageing and the death of neurones** (p. 435)
- **15 Genetic basis of human neuronal diseases** (p. 383)
- **2 Using mouse genetics to study neuronal development and function** (p. 15)
- **14 Neuronal Plasticity** (p. 353)
- **4 Protein trafficking in neurons** (p. 75)
- **5 Ion channels and electrical activity** (p. 103)
- **8 Signal reception: Ligand-gated ion channel receptors** (p. 183)
- **7 Molecular biology of postsynaptic structures** (p. 165)
- **9 Signal reception: G protein-coupled receptors** (p. 215)
- **Index** (p. 465)
- **10 Synapse-to-nucleus calcium signalling** (p. 249)
- **13 The cytoskeleton** (p. 313)
- **12 Mature neurons: Signal transduction-serine/ threonine kinases** (p. 287)
