

- Part I Introduction to the FEM
- 1 Introduction p. 3
- 1.1 Basic concepts of quantum mechanics p. 4
- 1.1.1 Schrodinger's equation p. 4
- 1.1.2 Postulates of quantum mechanics p. 8
- 1.2 Principle of stationary action p. 10
- 1.2.1 The action integral p. 11
- 1.2.2 Examples p. 15
- 1.3 Finite elements p. 18
- 1.4 Historical comments p. 22
- 1.5 Problems p. 23
- References p. 28
- 2 Simple quantum systems p. 31
- 2.1 The simple harmonic oscillator p. 31
- 2.2 The hydrogen atom p. 39
- 2.3 The Rayleigh-Ritz variational method p. 45
- 2.4 Programming considerations p. 50
- 2.5 Problems p. 57
- References p. 60
- 3 Interpolation polynomials in one dimension p. 63
- 3.1 Introduction p. 63
- 3.2 Lagrange interpolation polynomials p. 64
- 3.3 Hermite interpolation polynomials p. 66
- 3.4 Transition elements p. 70
- 3.5 Low order interpolation polynomials p. 71
- 3.5.1 Low order Lagrange interpolation p. 71
- 3.5.2 Low order Hermite interpolation p. 72
- 3.6 Interpolation polynomials in Mathematica p. 72
- 3.6.1 Lagrange interpolation p. 72
- 3.6.2 Hermite interpolation p. 74
- 3.7 Infinite elements p. 76
- 3.8 Simple quantum systems revisited p. 77
- 3.9 Problems p. 80
- References p. 81
- 4 Adaptive FEM p. 83
- 4.1 Introduction p. 83
- 4.2 Error in interpolation p. 84
- 4.3 Error in the discretized action p. 86
- 4.3.1 h-convergence p. 86
- 4.3.2 p-convergence p. 88
- 4.4 The action in adaptive calculations p. 91
- 4.4.1 An ordinary differential equation p. 92
- 4.4.2 The H atom again p. 96
- 4.4.3 Adaptive p-refinement p. 102
- 4.5 Concluding remarks p. 104
- References p. 105

- Part II Applications in 1D
- 5 Quantum mechanical tunneling p. 109
 - 5.1 Introduction p. 109
 - 5.2 Mixed BCs: redefining the action p. 110
 - 5.3 The Galerkin method p. 113
 - 5.4 Tunneling calculations in the FEM p. 115
 - 5.4.1 Evaluation of the residual p. 115
 - 5.4.2 Applying mixed BCs p. 118
 - 5.5 Comparing Galerkin FEM with WKB p. 123
 - 5.6 Quantum states in asymmetric wells p. 125
 - 5.7 Problems p. 137
 - References p. 141
- 6 Schrodinger-Poisson self-consistency p. 145
 - 6.1 Introduction p. 145
 - 6.2 Schrodinger and Poisson equations p. 149
 - 6.3 Source terms p. 151
 - 6.4 The Fermi energy and charge neutrality p. 153
 - 6.5 The Galerkin finite element approach p. 155
 - 6.5.1 Boundary conditions p. 155
 - 6.5.2 The iteration procedure p. 159
 - 6.5.3 Numerical issues p. 161
 - 6.5.4 Essential and natural boundary conditions p. 164
 - 6.6 Further developments p. 165
 - 6.7 Problems p. 167
 - References p. 169
- 7 Landau states in a magnetic field p. 171
 - 7.1 Introduction p. 171
 - 7.1.1 Landau levels p. 171
 - 7.1.2 Density of states p. 174
 - 7.2 Heterostructures in a B-field p. 177
 - 7.2.1 Faraday configuration p. 177
 - 7.2.2 Voigt configuration p. 179
 - 7.3 Comparison with experiments p. 181
 - 7.3.1 Interband transitions p. 181
 - 7.3.2 Energy dependence on the orbit center p. 183
 - 7.3.3 Level mixing in superlattices with small band offsets p. 185
 - 7.3.4 Density of states in the Voigt geometry p. 186
 - 7.4 Voigt geometry and a semiclassical model p. 188
 - 7.4.1 Landau orbit theory p. 188
 - 7.4.2 Envelope functions and the FEM in k-space p. 191
 - 7.5 Problems p. 192
 - References p. 194
- 8 Wavefunction engineering p. 195
 - 8.1 Introduction p. 195
 - 8.2 k P theory of band structure p. 197
 - 8.3 Designing mid-infrared lasers p. 200

- 8.3.1 The type-II W-laser p. 200
- 8.3.2 The interband cascade laser p. 206
- 8.4 Concluding comments p. 210
- References p. 211
- Part III 2D Applications of the FEM
- 9 2D elements and shape functions p. 217
- 9.1 Introduction p. 217
- 9.2 Rectangular elements p. 218
- 9.2.1 Lagrange elements p. 218
- 9.2.2 Hermite elements p. 221
- 9.3 Triangular elements p. 222
- 9.4 Defining curved edges p. 228
- 9.4.1 An element on a parametric curve p. 228
- 9.4.2 Parametric form of 2D surfaces p. 231
- 9.5 The action in 2D problems p. 233
- 9.6 Gauss integration in two dimensions p. 236
- References p. 238
- 10 Mesh generation p. 241
- 10.1 Meshing simple regions p. 241
- 10.1.1 Distortion of regular regions p. 242
- 10.1.2 Using orthogonal curved coordinates p. 247
- 10.2 Regions of arbitrary shape p. 247
- 10.2.1 Delaunay meshing p. 247
- 10.2.2 Advancing front algorithms p. 248
- 10.2.3 The algebraic integer method p. 250
- References p. 256
- 11 Applications in atomic physics p. 257
- 11.1 The H atom in a magnetic field p. 257
- 11.1.1 Schrodinger's equation and the action p. 258
- 11.1.2 Applying the FEM p. 259
- 11.1.3 Magnetic fields p. 266
- 11.2 Ground state energy in helium p. 269
- 11.3 Other results p. 271
- References p. 273
- 12 Quantum wires p. 275
- 12.1 Introduction p. 275
- 12.2 Quantum wires and the FEM p. 276
- 12.3 Symmetry properties of the square wire p. 282
- 12.4 The checkerboard superlattice p. 285
- 12.5 Optical nonlinearity in the CBSL p. 289
- 12.6 Quantum wires of any cross-section p. 292
- References p. 295
- 13 Quantum waveguides p. 299
- 13.1 Quantization of resistance p. 300
- 13.2 The straight waveguide p. 303
- 13.3 Quantum bound states in waveguides p. 311

- 13.4 The quantum interference transistor p. 313
- 13.5 "Stealth" elements and absorbing BC p. 315
- 13.6 The Ginzburg-Landau equation p. 322
- References p. 323
- 14 Time-dependent problems p. 327
- 14.1 Introduction p. 327
- 14.2 Standard approaches to time evolution p. 327
- 14.2.1 Schrodinger's equation and the method of finite differences p. 327
- 14.2.2 The finite difference method for the wave equation p. 330
- 14.3 A transfer matrix for time evolution p. 331
- 14.4 Lanczos reduction of transfer matrices p. 335
- 14.5 Instability with initial conditions p. 338
- 14.5.1 Comparing IVBC and two-point BCs p. 338
- 14.6 The variational approach p. 347
- 14.6.1 A variational difficulty p. 347
- 14.6.2 Variations using adjoint functions p. 348
- 14.6.3 Adjoint variations for the wave equation p. 350
- 14.6.4 Connection with quantum field theory p. 352
- 14.7 Concluding remarks p. 355
- References p. 356
- Part IV Sparse Matrix Applications
- 15 Matrix solvers and related issues p. 363
- 15.1 Introduction p. 363
- 15.2 Bandwidth reduction p. 363
- 15.3 Solution of linear equations p. 366
- 15.3.1 Gauss elimination p. 366
- 15.3.2 The conjugate gradient method p. 367
- 15.4 The standard eigenvalue problem p. 372
- 15.5 The generalized eigenvalue problem p. 373
- 15.5.1 Sturm sequence check p. 376
- 15.5.2 Inverse vector iteration p. 378
- 15.5.3 The subspace vectors p. 380
- 15.5.4 The Rayleigh quotient p. 381
- 15.5.5 Subspace iteration p. 383
- 15.5.6 The Davidson algorithm p. 385
- 15.5.7 Least square residual minimization p. 388
- 15.5.8 The Lanczos method p. 388
- References p. 393
- Part V Boundary Elements
- 16 The boundary element method p. 399
- 16.1 Introduction p. 399
- 16.2 The boundary integral p. 400
- 16.3 An analytical approach p. 402
- 16.3.1 A Dirichlet problem p. 402
- 16.3.2 A Neumann problem p. 406
- 16.4 Infinite domain Green's function p. 408

- 16.5 Numerical issues p. 414
- 16.5.1 Evaluation of the element integrals p. 414
- 16.5.2 Applying boundary conditions p. 415
- 16.5.3 Boundary condition at the corner node p. 417
- 16.5.4 Setting up the matrix equation p. 420
- 16.5.5 Construction of interior solution p. 422
- 16.6 A worked example p. 423
- 16.7 Two sum rules p. 425
- 16.8 Comparing the BEM with the FEM p. 427
- 16.9 Problems p. 428
- References p. 432
- 17 The BEM and surface plasmons p. 435
- 17.1 Introduction p. 435
- 17.2 Multiregion BEM: two regions p. 437
- 17.2.1 Linear interpolation p. 437
- 17.2.2 Hermite interpolation p. 439
- 17.3 Bulk and surface plasmons p. 440
- 17.3.1 Bulk plasma oscillations p. 441
- 17.3.2 Surface plasmons at a single planar interface p. 443
- 17.3.3 Surface plasmons for slab geometry p. 447
- 17.3.4 Surface plasmons in a cylindrical wire p. 451
- 17.3.5 Two metallic wires p. 455
- 17.3.6 Metal wire on a substrate p. 458
- 17.3.7 Plasmons in other confining geometries p. 460
- 17.4 Surface-enhanced Raman scattering p. 461
- 17.5 Problems p. 462
- References p. 468
- 18 The BEM and quantum applications p. 471
- 18.1 Introduction p. 471
- 18.2 2D electron waveguides p. 471
- 18.2.1 Implementing boundary conditions p. 477
- 18.2.2 Multiregion waveguide problems p. 483
- 18.2.3 Multiple ports and transmission p. 484
- 18.3 The BEM and 2D scattering p. 487
- 18.4 Eigenvalue problems and the BEM p. 491
- 18.4.1 Quantum wires p. 491
- 18.4.2 Hearing the shape of a drum p. 495
- 18.5 Concluding remarks on the BEM p. 498
- 18.6 Problems p. 501
- References p. 505
- Part VI Appendices
- A Gauss quadrature p. 511
- A.1 Introduction p. 511
- A.2 Gauss-Legendre quadrature p. 511
- A.3 Gauss-Legendre base points and weights p. 513
- A.4 An algorithm for adaptive quadrature p. 517

- A.5 Other Gauss formulas p. 519
- A.6 The Cauchy principal value of an integral p. 520
- A.7 Properties of Legendre functions p. 522
- A.8 Problems p. 524
- References p. 525
- B Generalized functions p. 527
- B.1 The Dirac $[\delta]$ -function p. 527
- B.2 The $[\delta]$ -function as the limit of a "normal" function p. 530
- B.3 $[\delta]$ -functions in three dimensions p. 532
- B.4 Other generalized functions p. 533
- B.4.1 The step-function $[\theta](x)$ p. 533
- B.4.2 The sign-function $[\text{varepsilon}](x)$ p. 534
- B.4.3 The Plemelj formula p. 535
- B.4.4 An integral representation for $[\theta](z)$ p. 536
- B.5 Problems p. 536
- References p. 538
- C Green's functions p. 541
