

Table of contents

- **List of contributors** (p. xiii)
- **Abbreviations** (p. xv)
- **1 Macromolecular interactions in hepatitis B virus replication and particle assembly** (p. 1)
 - **1. Introduction** (p. 1)
 - **2. The HBV infectious cycle** (p. 3)
 - **3. Experimental systems to study HBV replication** (p. 6)
 - **3.1 Animal models** (p. 6)
 - **3.2 Transfection of cloned hepadnavirus DNA** (p. 10)
 - **3.3 Reconstituting hepadnavirus reverse transcription in vitro** (p. 15)
 - **4. Assembly of virus particles** (p. 22)
 - **4.1 Envelope containing particles** (p. 22)
 - **4.2 The nucleocapsid** (p. 23)
 - **5. The enigma of HBx** (p. 28)
 - **6. Conclusions and perspectives** (p. 30)
 - **Acknowledgements** (p. 31)
 - **References** (p. 31)
- **2 Protein-protein interactions in papillomavirus replication** (p. 41)
 - **1. Introduction** (p. 41)
 - **2. Early HPV proteins** (p. 42)
 - **2.1 HPV-16 E6** (p. 42)
 - **2.2 HPV-16 E7** (p. 45)
 - **2.3 HPV-16 E5** (p. 50)
 - **2.4 Summary of the roles of E6, E7, and E5 in keratinocyte differentiation and cell cycle control** (p. 52)
 - **3. Viral proteins involved in viral DNA replication** (p. 54)
 - **3.1 E1 and E2 proteins** (p. 55)
 - **3.2 Maintenance and amplification of HPV genomes** (p. 57)
 - **4. Summary** (p. 57)
 - **Acknowledgments** (p. 58)
 - **References** (p. 58)
- **3 Molecular interactions in herpes simplex virus DNA replication** (p. 66)
 - **1. Introduction** (p. 66)
 - **2. Identification of the cis-acting signals and trans-acting proteins involved in HSV-1 DNA synthesis** (p. 67)
 - **3. Models for HSV-1 DNA replication** (p. 71)
 - **4. Molecular interactions involved in HSV-1 DNA synthesis** (p. 74)
 - **5. Interactions involved in unwinding the replication origins** (p. 74)
 - **5.1 ICP8** (p. 75)
 - **5.2 HSV-1 DNA replication origins** (p. 76)
 - **5.3 Interaction of UL9 with the viral origins** (p. 78)
 - **5.4 DNA helicase activity of UL9 and interaction with ICP8** (p. 80)
 - **5.5 Unwinding of the replication origins** (p. 81)
 - **5.6 Regulation of origin activity** (p. 82)

- **6. Interactions involved in the initiation of DNA synthesis** (p. 83)
 - **6.1 The helicase--primase complex** (p. 83)
 - **6.2 Effect of ICP8 on the helicase--primase complex** (p. 84)
 - **6.3 The HSV-1 DNA polymerase holoenzyme** (p. 84)
 - **6.4 Interaction between UL8 and UL9** (p. 87)
 - **6.5 Interactions of the HSV-1 DNA polymerase with UL8 and UL9** (p. 87)
 - **6.6 Interaction of host DNA polymerase [alpha] with UL9** (p. 88)
 - **7 A model for the establishment of the HSV-1 replication fork** (p. 88)
 - **8 Other interactions involving HSV-1 ICP8** (p. 91)
 - **9. Intranuclear localization of HSV-1 DNA synthesis** (p. 92)
 - **10. Concluding remarks** (p. 94)
 - **References** (p. 94)
- **4 Epstein--Barr virus proteins involved in cell immortalization** (p. 105)
 - **1. Introduction** (p. 105)
 - **2. The nuclear proteins expressed in EBV-transformed B cells** (p. 106)
 - **2.1 The EBV nuclear antigen-1, EBNA1** (p. 106)
 - **2.2 The EBV nuclear antigen-2, EBNA2** (p. 108)
 - **2.3 The EBV leader protein, EBNA-LP** (p. 110)
 - **2.4 The EBV nuclear antigen-3 family, EBNA3A, EBNA3B, and EBNA3C** (p. 111)
 - **3. Latent membrane proteins expressed in EBV-transformed B cells** (p. 114)
 - **3.1 The latent membrane protein-1, LMP1** (p. 114)
 - **3.2 The latent membrane protein-2, LMP2** (p. 118)
 - **4. Conclusions** (p. 119)
 - **References** (p. 120)
- **5 Molecular piracy by KSHV: a strategy of live and let live** (p. 133)
 - **1. Introduction** (p. 133)
 - **2. KSHV as a model for molecular piracy** (p. 133)
 - **3. Immunomodulatory proteins encoded by KSHV** (p. 135)
 - **3.1 Viral interleukin-6 (vIL-6)** (p. 135)
 - **3.2 Viral macrophage inflammatory proteins (vMIPs)** (p. 137)
 - **3.3 Viral G protein-coupled receptor (vGCR)** (p. 139)
 - **3.4 Viral interferon regulatory factor (vIRF)** (p. 141)
 - **4. KSHV proteins affecting the cell cycle and apoptosis** (p. 143)
 - **4.1 Viral cyclin (v-Cyc)** (p. 143)
 - **4.2 Viral Bcl-2 (vBcl-2)** (p. 144)
 - **4.3 Viral FLIP (vFLIP)** (p. 145)
 - **5. Novel ORFs encoded by KSHV** (p. 146)
 - **5.1 ORF K1** (p. 146)
 - **5.2 Kaposin** (p. 147)
 - **6. Conclusions** (p. 147)
 - **Acknowledgements** (p. 148)
 - **References** (p. 148)
- **6 Cellular sites and mechanisms of human cytomegalovirus latency** (p. 156)
 - **1. Introduction** (p. 156)
 - **2. Cells of the myeloid lineage are an important site of carriage of HCMV** (p. 157)
 - **3. Viral gene expression associated with latency** (p. 158)

- **4. Permissiveness of peripheral blood cells for HCMV infection requires differentiation** (p. 159)
- **5. Bone marrow--a reservoir of virus in the healthy carrier** (p. 160)
- **6. Conditionally permissive cell lines as models for factors controlling latency and reactivation** (p. 161)
- **7. Many cell types are infected during viraemia--does this reflect other sites of latency?** (p. 165)
- **8. Conclusions** (p. 166)
- **Acknowledgements** (p. 167)
- **References** (p. 168)
- **7. Control of transcription by adenovirus-E1A proteins** (p. 173)
 - **1. Introduction** (p. 173)
 - **2. The adenovirus E1A proteins** (p. 173)
 - **3. Transcriptional regulation** (p. 174)
 - **3.1 Regulation of transcription initiation** (p. 175)
 - **4. Binding of E1A to the retinoblastoma and related proteins** (p. 177)
 - **4.1 Effect of pocket proteins on E2F** (p. 179)
 - **4.2 Binding of pRb to other cellular proteins** (p. 181)
 - **5. Binding of E1A to p300 and related proteins** (p. 184)
 - **5.1 Role of p300/CBP in transcription regulation** (p. 186)
 - **5.2 The intrinsic and associated acetyltransferase activity of p300/CBP** (p. 187)
 - **5.3 Role of p300/CBP in cell growth and differentiation** (p. 188)
 - **5.4 Role of the individual p300/CBP members** (p. 189)
 - **6. Other proteins associating with E1A** (p. 190)
 - **Acknowledgements** (p. 190)
 - **References** (p. 191)
- **8. Adenovirus proteins that regulate apoptosis** (p. 200)
 - **1. Introduction** (p. 200)
 - **2. Course of adenovirus infection** (p. 200)
 - **3. E3-coded proteins that inhibit immune-mediated apoptosis** (p. 204)
 - **4. Induction of apoptosis by E1A** (p. 208)
 - **5. Inhibition of apoptosis by the E1B-19K protein** (p. 212)
 - **6. Inhibition of apoptosis by the E1B-55K protein** (p. 216)
 - **7. Apoptosis regulation by E4 proteins** (p. 218)
 - **8. Inhibition of the antiviral effects of interferons** (p. 219)
 - **9. Induction of cell lysis and virus release by the adenovirus death protein (ADP)** (p. 220)
 - **10. Concluding remarks** (p. 220)
 - **Acknowledgements** (p. 222)
 - **References** (p. 222)
 - **Index** (p. 233)
