

Table of contents

- **1 Introduction**
- **Engineering and Mechanics**
- **Learning Mechanics**
- **Fundamental Concepts**
- **Units**
- **2 Motion of a Point**
- **Position, Velocity, and Acceleration**
- **Straight-Line Motion**
- **Curvilinear Motion**
- **Relative Motion**
- **3 Force, Mass, and Acceleration**
- **Newton's Second Law**
- **Equation of Motion for the Center at Mass**
- **Inertial Reference Frames**
- **Applications**
- **Orbital Mechanics**
- **4 Energy Methods**
- **Work and Kinetic Energy**
- **Principle of Work and Energy**
- **Work and Power**
- **Work Done by Particular Forces**
- **Potential Energy Conservation of Energy**
- **Conservative Forces**
- **5 Momentum Methods**
- **Principle of Impulse and Momentum**
- **Conservation of Linear Momentum**
- **Impacts**
- **Angular Momentum**
- **Mass Flows**
- **6 Planar Kinematics of Rigid Bodies**
- **Rigid Bodies and Types of Motion**
- **Rotation about a Fixed Axis**
- **General Motions: Velocities**
- **General Motions: Accelerations**
- **Sliding Contacts**
- **Moving Reference Frames**
- **7 Planar Dynamics of Rigid Bodies**
- **Preview of the Equations of Motion**
- **Momentum Principles for a System of Particles**
- **Derivation of the Equations of Motion**
- **Applications**
- **D'Alembert's Principle**
- **Appendix: Moments of Inertia**
- **8 Energy and Momentum In Rigid Body Dynamics**

- **Principle of Work and Energy**
- **Work and Potential Energy**
- **Power**
- **Principles of Impulse and Momentum**
- **Impacts**
- **9 Three-Dimensional Kinematics and Dynamics of Rigid Bodies**
- **Kinematics**
- **Angular Momentum**
- **Moments and Products of Inertia**
- **Euler's Equations**
- **Eulerian Angles**
- **10 Vibrations**
- **Conservative Systems**
- **Damped Vibrations**
- **Forced Vibrations**
