

Table of contents

- (NOTE: Chapters 2-12 conclude with Summary.)
- **1 Introduction**
- Terminology
- MATLAB Overview
- Organization of the Book
- Rating Systems for Exercises
- **I MATLAB Basics**
- **2 Interactive Computing with MATLAB**
- Running MATLAB
- Matrices and Vectors
- Additional Types of Variables
- Managing the Interactive Environment
- Plotting in MATLAB
- **3 MATLAB Programming**
- Script m-Files
- Function m-Files
- Input and Output
- Flow Control
- Vectorization
- Deus ex Machina
- **4 Organizing and Debugging MATLAB Programs**
- Organizing and Documenting m-Files
- Organizing a Numerical Solution
- Debugging
- **II Numerical Techniques**
- **5 Unavoidable Errors in Computing**
- Digital Representation of Numbers
- Finite Precision Arithmetic
- Truncation Error of Algorithms
- **6 Finding the Roots of $f(x)=0$**
- Preliminaries
- Fixed-Point Iteration
- Bisection
- Newton's Method
- The Secant Method
- Hybrid Methods
- Roots of Polynomials
- **7 A Review of Linear Algebra**
- Vectors
- Matrices
- Mathematical Properties of Vectors and Matrices
- Special Matrices
- **8 Solving Systems of Equations**
- Basic Concepts

- **Gaussian Elimination**
- **Limitations on Numerical Solutions to $Ax = b$**
- **Factorization Methods**
- **Nonlinear Systems of Equations**
- **9 Least-Squares Fitting of a Curve to Data**
- **Fitting a Line to Data**
- **Least-Squares Fit to a Linear Combination of Functions**
- **Multivariate Linear Least-Squares Fitting**
- **10 Interpolation**
- **Basic Ideas**
- **Interpolating Polynomials of Arbitrary Degree**
- **Piecewise Polynomial Interpolation**
- **MATLAB's Built in Interpolation Functions**
- **11 Numerical Integration**
- **Basic Ideas and Nomenclature**
- **Newton-Cotes Rules**
- **Gaussian Quadrature**
- **Adaptive Quadrature**
- **Improper Integrals and Other Complications**
- **12 Numerical Integration of Ordinary Differential Equations**
- **Basic Ideas and Nomenclature**
- **Euler's Method**
- **Higher Order One-Step Methods**
- **Adaptive Stepsize Algorithms**
- **Coupled ODEs**
- **Additional Topics**
- **Bibliography**
- **Appendix A Eigenvalues and Eigensystems**
- **Eigenvectors Map onto Themselves**
- **Mathematical Preliminaries**
- **The Power Method**
- **Built-in Functions for Eigenvalue Computation**
- **Singular Value Decomposition**
- **Appendix B Sparse Matrices**
- **Storage and Flop Savings**
- **MATLAB Sparse Matrix Format**
- **MATLAB Toolbox Functions**
- **Listings for NMM Toolbox m-Files**
- **Subject Index**
