

- Chapter 1 Computer Networks and the Internet p. 1
- 1.1 What Is the Internet? p. 1
- 1.1.1 A Nuts and Bolts Description p. 1
- 1.1.2 A Service Description p. 4
- 1.1.3 Some Good Hyperlinks p. 5
- 1.2 What Is a Protocol? p. 6
- 1.2.1 A Human Analogy p. 7
- 1.2.2 Network Protocols p. 8
- 1.3 The Network Edge p. 9
- 1.3.1 End Systems, Clients, and Servers p. 9
- 1.3.2 Connectionless and Connection-Oriented Services p. 11
- 1.4 The Network Core p. 13
- 1.4.1 Circuit Switching, Packet Switching, and Message Switching p. 13
- 1.4.2 Routing in Data Networks p. 24
- 1.5 Access Networks and Physical Media p. 29
- 1.5.1 Access Networks p. 29
- 1.5.2 Physical Media p. 34
- 1.6 Delay and Loss in Packet-Switched Networks p. 38
- 1.6.1 Types of Delay p. 38
- 1.7 Protocol Layers and Their Service Models p. 44
- 1.7.1 Layered Architecture p. 45
- 1.7.2 The Internet Protocol Stack p. 49
- 1.7.3 Network Entities and Layers p. 53
- 1.8 Internet Backbones, NAPs, and ISPs p. 53
- 1.9 A Brief History of Computer Networking and the Internet p. 56
- 1.9.1 Development and Demonstration of Early Packet Switching Principles: 1961-1972 p. 56
- 1.9.2 Internetworking, and New and Proprietary Networks: 1972-1980 p. 57
- 1.9.3 A Proliferation of Networks: 1980-1990 p. 60
- 1.9.4 Commercialization and the Web: The 1990s p. 61
- 1.10 Summary p. 62
- Homework Problems and Questions p. 64
- Problems p. 66
- Discussion Questions p. 68
- Interview: Leonard Kleinrock p. 70
- Chapter 2 Application Layer p. 72
- 2.1 Principles of Application Layer Protocols p. 72
- 2.1.1 Application-Layer Protocols p. 73
- 2.1.2 What Services Does an Application Need? p. 78
- 2.1.3 Services Provided by the Internet Transport Protocols p. 80
- 2.1.4 Network Applications Covered in this Book p. 83
- 2.2 The World Wide Web: HTTP p. 84
- 2.2.1 Overview of HTTP p. 85
- 2.2.2 Nonpersistent and Persistent Connections p. 87
- 2.2.3 HTTP Message Format p. 90
- 2.2.4 User-Server Interaction: Authentication and Cookies p. 94

- 2.2.5 The Conditional GET p. 96
- 2.2.6 Web Caches p. 97
- 2.3 File Transfer: FTP p. 104
- 2.3.1 FTP Commands and Replies p. 105
- 2.4 Electronic Mail in the Internet p. 106
- 2.4.1 SMTP p. 109
- 2.4.2 Comparison with HTTP p. 111
- 2.4.3 Mail Message Formats and MIME p. 112
- 2.4.4 Mail Access Protocols p. 118
- 2.4.5 Continuous Media E-mail p. 123
- 2.5 DNS--The Internet's Directory Service p. 124
- 2.5.1 Services Provided by DNS p. 124
- 2.5.2 Overview of How DNS Works p. 127
- 2.5.3 DNS Records p. 132
- 2.5.4 DNS Messages p. 134
- 2.6 Socket Programming with TCP p. 136
- 2.6.1 Socket Programming with TCP p. 137
- 2.6.2 An Example Client/Server Application in Java p. 139
- 2.7 Socket Programming with UDP p. 146
- 2.8 Building a Simple Web Server p. 154
- 2.8.1 Web Server Functions p. 154
- 2.9 Summary p. 158
- Homework Problems and Questions p. 159
- Problems p. 161
- Discussion Questions p. 162
- Programming Assignments p. 163
- Interview: Tim Berners-Lee p. 165
- Chapter 3 Transport Layer p. 167
- 3.1 Transport-Layer Services and Principles p. 167
- 3.1.1 Relationship between Transport and Network Layers p. 169
- 3.1.2 Overview of the Transport Layer in the Internet p. 171
- 3.2 Multiplexing and Demultiplexing Applications p. 172
- 3.3 Connectionless Transport: UDP p. 177
- 3.3.1 UDP Segment Structure p. 180
- 3.3.2 UDP Checksum p. 181
- 3.4 Principles of Reliable Data Transfer p. 182
- 3.4.1 Building a Reliable Data Transfer Protocol p. 184
- 3.4.2 Pipelined Reliable Data Transfer Protocols p. 193
- 3.4.3 Go-Back-N (GBN) p. 196
- 3.4.4 Selective Repeat (SR) p. 201
- 3.5 Connection-Oriented Transport: TCP p. 207
- 3.5.1 The TCP Connection p. 207
- 3.5.2 TCP Segment Structure p. 210
- 3.5.3 Sequence Numbers and Acknowledgment Numbers p. 211
- 3.5.4 Telnet: A Case Study for Sequence and Acknowledgment Numbers p. 213
- 3.5.5 Reliable Data Transfer p. 215

- 3.5.6 Flow Control p. 221
- 3.5.7 Round Trip Time and Timeout p. 224
- 3.5.8 TCP Connection Management p. 226
- 3.6 Principles of Congestion Control p. 231
- 3.6.1 The Causes and the Costs of Congestion p. 231
- 3.6.2 Approaches toward Congestion Control p. 237
- 3.6.3 ATM ABR Congestion Control p. 239
- 3.7 TCP Congestion Control p. 240
- 3.7.1 Overview of TCP Congestion Control p. 241
- 3.7.2 Modeling Latency: Static Congestion Window p. 249
- 3.7.3 Modeling Latency: Dynamic Congestion Window p. 253
- 3.8 Summary p. 258
- Homework Problems and Questions p. 260
- Problems p. 261
- Discussion Question p. 268
- Programming Assignment p. 268
- Interview: Sally Floyd p. 269
- Chapter 4 Network Layer and Routing p. 271
- 4.1 Introduction and Network Service Models p. 271
- 4.1.1 Network Service Model p. 273
- 4.1.2 Origins of Datagram and Virtual Circuit Service p. 279
- 4.2 Routing Principles p. 280
- 4.2.1 A Link State Routing Algorithm p. 282
- 4.2.2 A Distance Vector Routing Algorithm p. 286
- 4.2.3 Other Routing Algorithms p. 295
- 4.3 Hierarchical Routing p. 297
- 4.4 Internet Protocol p. 300
- 4.4.1 IPv4 Addressing p. 302
- 4.4.2 Transporting a Datagram from Source to Destination: Addressing and Routing p. 310
- 4.4.3 Datagram Format p. 314
- 4.4.4 IP Fragmentation and Reassembly p. 317
- 4.4.5 ICMP: Internet Control Message Protocol p. 319
- 4.5 Routing in the Internet p. 321
- 4.5.1 Intra-Autonomous System Routing in the Internet p. 322
- 4.5.2 Inter-Autonomous System Routing p. 329
- 4.6 What's Inside a Router? p. 332
- 4.6.1 Input Ports p. 333
- 4.6.2 Switching Fabrics p. 336
- 4.6.3 Output Ports p. 338
- 4.6.4 Where Does Queuing Occur? p. 338
- 4.7 IPv6 p. 341
- 4.7.1 IPv6 Packet Format p. 342
- 4.7.2 Transitioning from IPv4 to IPv6 p. 345
- 4.8 Multicast Routing p. 348
- 4.8.1 Introduction: The Internet Multicast Abstraction and Multicast Groups p. 348

- 4.8.2 The IGMP Protocol p. 350
- 4.8.3 Multicast Routing: The General Case p. 355
- 4.8.4 Multicast Routing in the Internet p. 362
- 4.9 Summary p. 367
- Homework Problems and Questions p. 368
- Problems p. 370
- Discussion Questions p. 374
- Programming Assignment p. 375
- Interview: Jose Joaquin Garcia-Luna-Aceves p. 377
- Chapter 5 Link Layer and Local Area Networks p. 379
- 5.1 The Data Link Layer: Introduction, Services p. 379
- 5.1.1 The Services Provided by the Link Layer p. 380
- 5.1.2 Adapters Communicating p. 383
- 5.2 Error Detection and Correction Techniques p. 385
- 5.2.1 Parity Checks p. 386
- 5.2.2 Checksumming Methods p. 389
- 5.2.3 Cyclic Redundancy Check (CRC) p. 389
- 5.3 Multiple Access Protocols and LANs p. 391
- 5.3.1 Channel Partitioning Protocols p. 394
- 5.3.2 Random Access Protocols p. 398
- 5.3.3 Taking-Turns Protocols p. 406
- 5.3.4 Local Area Networks (LANs) p. 407
- 5.4 LAN Addresses and ARP p. 409
- 5.4.1 LAN Addresses p. 409
- 5.4.2 Address Resolution Protocol p. 411
- 5.5 Ethernet p. 415
- 5.5.1 Ethernet Basics p. 417
- 5.5.2 CSMA/CD: Ethernet's Multiple Access Protocol p. 421
- 5.5.3 Ethernet Technologies p. 423
- 5.6 Hubs, Bridges, and Switches p. 427
- 5.6.1 Hubs p. 427
- 5.6.2 Bridges p. 429
- 5.6.3 Switches p. 437
- 5.7 IEEE 802.11 LANs p. 441
- 5.7.1 802.11 LAN Architecture p. 441
- 5.7.2 802.11 Media Access Protocols p. 442
- 5.8 PPP: The Point-to-Point Protocol p. 447
- 5.8.1 PPP Data Framing p. 449
- 5.8.2 PPP Link Control Protocol (LCP) and Network Control Protocols p. 451
- 5.9 Asynchronous Transfer Mode (ATM) p. 453
- 5.9.1 Principle Characteristics of ATM p. 454
- 5.9.2 ATM Physical Layer p. 456
- 5.9.3 ATM Layer p. 458
- 5.9.4 ATM Adaptation Layer p. 459
- 5.9.5 IP Over ATM p. 461
- 5.9.6 ARP and ATM p. 464

- 5.10 X.25 and Frame Relay p. 465
- 5.10.1 A Few Words About X.25 p. 466
- 5.10.2 Frame Relay p. 467
- 5.11 Summary p. 471
- Homework Problems and Questions p. 472
- Problems p. 474
- Discussion Questions p. 480
- Interview: Robert Metcalfe p. 481
- Chapter 6 Multimedia Networking p. 483
- 6.1 Multimedia Networking Applications p. 484
- 6.1.1 Examples of Multimedia Applications p. 484
- 6.1.2 Hurdles for Multimedia in Today's Internet p. 487
- 6.1.3 How Should the Internet Evolve to Better Support Multimedia? p. 488
- 6.1.4 Audio and Video Compression p. 489
- 6.2 Streaming Stored Audio and Video p. 491
- 6.2.1 Accessing Audio and Video from a Web Server p. 493
- 6.2.2 Sending Multimedia from a Streaming Server to a Helper Application p. 495
- 6.2.3 Real Time Streaming Protocol (RTSP) p. 497
- 6.3 Making the Best of the Best-Effort Service: An Internet Phone Example p. 501
- 6.3.1 The Limitations of a Best-Effort Service p. 501
- 6.3.2 Removing Jitter at the Receiver for Audio p. 503
- 6.3.3 Recovering from Packet Loss p. 506
- 6.3.4 Streaming Stored Audio and Video p. 510
- 6.4 RTP p. 510
- 6.4.1 RTP Basics p. 510
- 6.4.2 RTP Packet Header Fields p. 513
- 6.4.3 RTP Control Protocol (RTCP) p. 514
- 6.4.4 H.323 p. 517
- 6.5 Beyond Best-Effort p. 522
- 6.5.1 Scenario 1: A 1 Mbps Audio Application and an FTP Transfer p. 523
- 6.5.2 Scenario 2: A 1 Mbps Audio Application and a High Priority FTP Transfer p. 524
- 6.5.3 Scenario 3: A Misbehaving Audio Application and an FTP Transfer p. 525
- 6.5.4 Scenario 4: Two 1 Mbps Audio Applications Over an Overloaded 1.5 Mbps Link p. 526
- 6.6 Scheduling and Policing Mechanisms p. 528
- 6.6.1 Scheduling Mechanisms p. 528
- 6.6.2 Policing: The Leaky Bucket p. 533
- 6.7 Integrated Services p. 536
- 6.7.1 Guaranteed Quality of Service p. 538
- 6.7.2 Controlled-Load Network Service p. 539
- 6.8 RSVP p. 539
- 6.8.1 The Essence of RSVP p. 540
- 6.8.2 A Few Simple Examples p. 542
- 6.8.3 Path Messages p. 544
- 6.8.4 Reservation Styles p. 544
- 6.8.5 Transport of Reservation Messages p. 548

- 6.9 Differentiated Services p. 549
- 6.9.1 Differentiated Services: A Simple Scenario p. 550
- 6.9.2 Traffic Classification and Conditioning p. 552
- 6.9.3 Per-Hop Behavior p. 554
- 6.9.4 A Beginning p. 556
- 6.10 Summary p. 556
- Homework Problems and Questions p. 558
- Problems p. 559
- Discussion Questions p. 561
- Interview: Henning Schulzrinne p. 563
- Chapter 7 Security in Computer Networks p. 565
- 7.1 What is Network Security? p. 565
- 7.1.1 Secure Communication p. 565
- 7.1.2 Network Security Considerations in the Internet p. 567
- 7.2 Principles of Cryptography p. 569
- 7.2.1 Symmetric Key Cryptography p. 571
- 7.2.2 Public Key Encryption p. 575
- 7.3 Authentication: Who are You? p. 581
- 7.3.1 Authentication Protocol ap1.0 p. 581
- 7.3.2 Authentication Protocol ap2.0 p. 582
- 7.3.3 Authentication Protocol ap3.0 p. 583
- 7.3.4 Authentication Protocol ap3.1 p. 583
- 7.3.5 Authentication Protocol ap4.0 p. 584
- 7.3.6 Authentication Protocol ap5.0 p. 586
- 7.4 Integrity p. 588
- 7.4.1 Generating Digital Signatures p. 589
- 7.4.2 Message Digests p. 590
- 7.4.3 Hash Function Algorithms p. 593
- 7.5 Key Distribution and Certification p. 595
- 7.5.1 The Key Distribution Center p. 595
- 7.5.2 Public Key Certification p. 598
- 7.6 Secure E-Mail p. 602
- 7.6.1 Principles of Secure E-Mail p. 603
- 7.6.2 PGP p. 605
- 7.7 Internet Commerce p. 608
- 7.7.1 Internet Commerce Using SSL p. 609
- 7.7.2 Internet Commerce Using SET p. 613
- 7.8 Network Layer Security: IPsec p. 616
- 7.8.1 Authentication Header (AH) Protocol p. 617
- 7.8.2 The ESP Protocol p. 618
- 7.8.3 SA and Key Management p. 619
- 7.9 Summary p. 620
- Homework Problems and Questions p. 621
- Problems p. 622
- Discussion Questions p. 623
- Interview: Philip Zimmermann p. 624

- Chapter 8 Network Management p. 626
- 8.1 What Is Network Management? p. 626
- 8.2 The Infrastructure for Network Management p. 631
- 8.3 The Internet Network-Management Framework p. 634
- 8.3.1 Structure of Management Information: SMI p. 635
- 8.3.2 Management Information Base: MIB p. 638
- 8.3.3 SNMP Protocol Operations and Transport Mappings p. 641
- 8.3.4 Security and Administration p. 644
- 8.4 ASN.1 p. 648
- 8.5 Firewalls p. 653
- 8.5.1 Packet Filtering p. 654
- 8.5.2 Application Gateways p. 655
- 8.6 Summary p. 657
- Homework Problems and Questions p. 658
- Problems p. 659
- Discussion Questions p. 659
- Interview: Jeff Case p. 660
- References p. 663
- Index p. 689
