

Table of contents

- **I Design**
- **1 Parallel Computers and Computation**
- **Parallelism and Computing**
- **A Parallel Machine Model**
- **Other Parallel Machine Models**
- **A Parallel Programming Model**
- **Parallel Algorithms**
- **2 Designing Parallel Algorithms**
- **Methodical Design**
- **Partitioning**
- **Communication**
- **Agglomeration**
- **Mapping**
- **Case Study: Climate Modeling**
- **Case Study: Floorplan Optimization**
- **Case Study: Computational Chemistry**
- **3 A Quantitative Basis for Design**
- **Defining Performance**
- **Approaches to Performance**
- **Modeling Performance**
- **Performance Modeling and Design**
- **Experimental Studies**
- **Evaluating Implementations**
- **A Refined Communication Cost Model**
- **Input/Output**
- **4 Putting It All Together**
- **Modular Design**
- **Modularity and Parallel Programming**
- **Data Distribution**
- **Sequential Composition**
- **Performance Analysis**
- **Templates**
- **II Tools**
- **5 Fortran M**
- **Introduction**
- **Concurrency**
- **Communication**
- **Unstructured Communication**
- **Probing for Pending Messages**
- **Argument Passing**
- **Determinism**
- **Mapping**
- **Performance Issues**
- **Case Study: Finite Difference**

- **Case Study: Floorplan Optimization**
- **6 Modular C Data Parallel Languages**
- **Data Parallelism**
- **Fortran**
- **90 High Performance Fortran**
- **Integrating Task and Data Parallelism**
- **7 Message Passing Libraries**
- **The MPI Programming Model**
- **MPI Basics**
- **Global Operations**
- **Querying Received and Pending Messages**
- **Derived Data Types**
- **Modularity**
- **Performance**
- **Other MPI Features**
