

Table of Contents

- Preface p. xxvii
- Introduction p. xxxv
- Chapter 1. Atoms and Molecules; Orbitals and Bonding p. 1
 - 1.1 Atoms and Atomic Orbitals p. 2
 - 1.2 Covalent Bonds and Lewis Structures p. 4
 - 1.3 Introduction to Resonance Forms p. 13
 - 1.4 More on Atomic Orbitals p. 18
 - 1.5 The Covalent Bond: Hydrogen (H_2) p. 25
 - 1.6 Bond Strength p. 31
 - 1.7 An Introduction to Reactivity: Acids and Bases p. 37
 - 1.8 Quantum Mechanics and Babies p. 38
 - 1.9 Summary p. 39
 - 1.10 Additional Problems p. 41
- Chapter 2. Alkanes p. 45
 - 2.1 The Structure of Methane (CH_4) p. 46
 - 2.2 Hybrid Orbitals: Making a Better Model for Methane p. 50
 - 2.3 Derivatives of Methane: Methyl (CH_3) and Methyl Compounds (CH_3X) p. 57
 - 2.4 The Methyl Cation (CH_3^+), Anion (CH_3^-), and Radical ($\cdot\text{CH}_3$) p. 59
 - 2.5 Ethane (C_2H_6), Ethyl Compounds ($\text{C}_2\text{H}_5\text{X}$), and Newman Projections p. 61
 - 2.6 Structure Drawings p. 67
 - 2.7 Propane (C_3H_8) and Propyl Compounds ($\text{C}_3\text{H}_7\text{X}$) p. 68
 - 2.8 Butanes (C_4H_{10}), Butyl Compounds ($\text{C}_4\text{H}_9\text{X}$), and Conformational Analysis p. 71
 - 2.9 Pentanes (C_5H_{12}) and Pentyl Compounds ($\text{C}_5\text{H}_{11}\text{X}$) p. 75
 - 2.10 The Naming Conventions for Alkanes p. 77
 - 2.11 Writing Isomers p. 79
 - 2.12 Rings p. 81
 - 2.13 Physical Properties of Alkanes and Cycloalkanes p. 85
 - 2.14 ^{13}C Nuclear Magnetic Resonance Spectroscopy p. 87
 - 2.15 Alkanes as Biomolecules p. 88
 - 2.16 Summary p. 89
 - 2.17 Additional Problems p. 90
- Chapter 3. Alkenes and Alkynes p. 93
 - 3.1 Alkenes: Structure and Bonding p. 93
 - 3.2 Derivatives, Isomers, and Names of Alkenes p. 101
 - 3.3 Nomenclature p. 104
 - 3.4 The Cahn-Ingold-Prelog Priority System p. 106
 - 3.5 Relative Stability of Alkenes: Heats of Formation p. 110
 - 3.6 Double Bonds in Rings p. 112

- 3.7 Physical Properties of Alkenes p. 117
- 3.8 Alkynes: Structure and Bonding p. 118
- 3.9 Relative Stability of Alkynes: Heats of Formation p. 121
- 3.10 Derivatives and Isomers of Alkynes p. 121
- 3.11 Triple Bonds in Rings p. 123
- 3.12 Physical Properties of Alkynes p. 124
- 3.13 Acidity of Alkynes p. 124
- 3.14 Molecular Formulas and Degrees of Unsaturation p. 125
- 3.15 Alkenes and Biology p. 126
- 3.16 Summary p. 128
- 3.17 Additional Problems p. 129
- Chapter 4. Stereochemistry p. 131
- 4.1 Chirality p. 132
- 4.2 Properties of Enantiomers: Physical Differences p. 134
- 4.3 The (R/S) Convention p. 136
- 4.4 The Physical Basis of Optical Activity p. 140
- 4.5 Properties of Enantiomers: Chemical Differences p. 142
- 4.6 Interconversion of Enantiomers by Mobile Equilibria: Gauche Butane p. 146
- 4.7 Diastereomers: Molecules Containing More Than One Stereogenic Atom p. 147
- 4.8 Physical Properties of Diastereomers: Optical Resolution p. 153
- 4.9 Determination of Absolute Configuration (R or S) p. 155
- 4.10 Stereochemical Analysis of Ring Compounds (a Beginning) p. 156
- 4.11 Review of Isomerism p. 159
- 4.12 Chirality without "Four Different Groups Attached to One Carbon" p. 161
- 4.13 Stereochemistry in the Real World: Thalidomide; The Consequences of Being Wrong-Handed p. 163
- 4.14 Summary p. 164
- 4.15 Additional Problems p. 165
- Chapter 5. Rings p. 167
- 5.1 Rings and Strain p. 168
- 5.2 Quantitative Evaluation of Strain Energy p. 176
- 5.3 Stereochemistry of Cyclohexane: Conformational Analysis p. 180
- 5.4 Monosubstituted Cyclohexanes p. 182
- 5.5 Disubstituted Ring Compounds p. 187
- 5.6 Bicyclic Compounds p. 195
- 5.7 Polycyclic Systems p. 201
- 5.8 Adamantanes in Materials and Biology p. 201
- 5.9 Summary p. 203
- 5.10 Additional Problems p. 204
- Chapter 6. Substitution and Elimination Reactions: The S_N2, S_N1, E2, and E1 Reactions p. 207
- 6.1 Alkyl Halides: Nomenclature and Structure p. 208
- 6.2 Reaction Mechanism: Brønsted Acids and Bases p. 210
- 6.3 The Arrow Formalism p. 212
- 6.4 Lewis Acids and Bases p. 214
- 6.5 HOMO-LUMO Interactions p. 215

- 6.6 Reactions of Alkyl Halides: The Substitution Reaction p. 216
- 6.7 Substitution, Nucleophilic, Bimolecular: The S_N2 Reaction p. 217
- 6.8 The S_N2 Reaction in Biochemistry p. 236
- 6.9 Substitution, Nucleophilic, Unimolecular: The S_N1 Reaction p. 237
- 6.10 Overview of the S_N2 and S_N1 Reactions p. 244
- 6.11 The Unimolecular Elimination Reaction: E1 p. 247
- 6.12 The Bimolecular Elimination Reaction: E2 p. 249
- 6.13 What Can We Do with These Reactions? Synthetic Utility p. 261
- 6.14 Summary p. 263
- 6.15 Additional Problems p. 266
- Chapter 7. Equilibria p. 273
- 7.1 Equilibrium p. 275
- 7.2 Gibbs Standard Free Energy Change p. 278
- 7.3 Rates of Chemical Reactions p. 280
- 7.4 Rate Constant p. 282
- 7.5 Energy Barriers in Chemical Reactions: The Transition State and Activation Energy p. 283
- 7.6 Reaction Mechanism p. 290
- 7.7 The Hammond Postulate: Thermodynamics versus Kinetics p. 292
- 7.8 Enzymes and Reaction Rates p. 299
- 7.9 Summary p. 300
- 7.10 Additional Problems p. 302
- Chapter 8. Additions to Alkenes 1 p. 305
- 8.1 Electronegativity p. 306
- 8.2 Mechanism of the Addition of Hydrogen Halides to Alkenes p. 307
- 8.3 Regiochemistry p. 310
- 8.4 Resonance Effects p. 311
- 8.5 Review of Resonance: How to Write Resonance Forms p. 317
- 8.6 Resonance and the Stability of Carbocations p. 322
- 8.7 Inductive Effects on Addition Reactions p. 327
- 8.8 H-X Addition Reactions: Hydration p. 329
- 8.9 Dimerization and Polymerization of Alkenes p. 333
- 8.10 Hydroboration p. 335
- 8.11 Utility of Hydroboration: Alcohol Formation p. 344
- 8.12 Rearrangements During H-X Addition to Alkenes p. 346
- 8.13 Rearrangements in Biological Processes p. 350
- 8.14 Summary p. 351
- 8.15 Additional Problems p. 354
- Chapter 9. Additions to Alkenes 2; Additions to Alkynes p. 359
- 9.1 Addition of X₂ Reagents p. 359
- 9.2 Hydration Through Mercury Compounds: Oxymercuration p. 370
- 9.3 Other Addition Reactions Involving Three-Membered Rings: Oxiranes and Cyclopropanes p. 373
- 9.4 Dipolar Addition Reactions p. 386
- 9.5 Addition Reactions of Alkynes: H-X Addition p. 394
- 9.6 Addition of X₂ Reagents to Alkynes p. 398

- 9.7 Hydration of Alkynes p. 398
- 9.8 Hydroboration of Alkynes p. 400
- 9.9 Hydrogenation of Alkynes: Syn Hydrogenation p. 402
- 9.10 Reduction by Sodium in Ammonia: Anti Hydrogenation p. 403
- 9.11 Three-membered Rings in Biochemistry p. 405
- 9.12 Summary p. 406
- 9.13 Additional Problems p. 410
- Chapter 10. Radical Reactions p. 417
- 10.1 Formation and Simple Reactions of Radicals p. 418
- 10.2 Structure of Radicals p. 426
- 10.3 Stability of Radicals p. 427
- 10.4 Radical Addition to Alkenes p. 430
- 10.5 Other Radical Addition Reactions p. 438
- 10.6 Radical-Initiated Addition of HBr to Alkynes p. 440
- 10.7 Photohalogenation p. 441
- 10.8 Allylic Halogenation p. 448
- 10.9 Rearrangements (and Nonrearrangements) of Radicals p. 452
- 10.10 Radicals in Your Body: Do Free Radicals Age Us? p. 456
- 10.11 Summary p. 456
- 10.12 Additional Problems p. 460
- Chapter 11. Dienes and the Allyl System; 2p Orbitals in Conjugation p. 465
- 11.1 Allenes: 1,2-Dienes p. 466
- 11.2 Related Systems: Ketenes and Cumulenes p. 468
- 11.3 Allenes as Intermediates in the Isomerization of Acetylenes p. 469
- 11.4 1,3-Dienes p. 472
- 11.5 The Physical Consequences of Conjugation p. 475
- 11.6 Molecular Orbitals and Ultraviolet Spectroscopy p. 480
- 11.7 Polyenes and Vision p. 486
- 11.8 The Chemical Consequences of Conjugation: Addition Reactions of Dienes p. 489
- 11.9 Thermodynamic and Kinetic Control of Addition Reactions p. 491
- 11.10 The Allyl System: Three Overlapping 2p Orbitals p. 495
- 11.11 The Allyl Cation: S_N1 Solvolysis of Allylic Halides p. 496
- 11.12 S_N2 Reactions of Allylic Halides p. 497
- 11.13 The Allyl Radical p. 499
- 11.14 The Allyl Anion p. 499
- 11.15 The Diels-Alder Reaction of Dienes p. 500
- 11.16 Biosynthesis of Terpenes p. 510
- 11.17 Steroid Biosynthesis p. 515
- 11.18 Summary p. 520
- 11.19 Additional Problems p. 522
- Chapter 12. Conjugation and Aromaticity p. 527
- 12.1 The Structure of Benzene p. 528
- 12.2 A Resonance Picture of Benzene p. 530
- 12.3 The Molecular Orbital Picture of Benzene p. 533
- 12.4 Quantitative Evaluations of Resonance Stabilization (Delocalization Energy) in Benzene p. 535

- 12.5 A Generalization of Aromaticity: Huckel's $4n + 2$ Rule p. 537
- 12.6 Annulenes p. 550
- 12.7 Substituted Benzenes p. 551
- 12.8 Physical Properties of Substituted Benzenes p. 554
- 12.9 Heterobenzenes and other Heterocyclic Aromatic Compounds p. 555
- 12.10 Polynuclear Aromatic Compounds p. 556
- 12.11 Introduction to the Chemistry of Benzene p. 559
- 12.12 The Benzyl Group and Its Reactivity: Activation of the Adjacent (Benzyl) Position by Benzene Rings p. 563
- 12.13 The Bio-downside: The Mechanism of Carcinogenesis by Polycyclic Aromatic Compounds p. 567
- 12.14 Summary p. 570
- 12.15 Additional Problems p. 572
- Chapter 13. Substitution Reactions of Aromatic Compounds p. 575
- 13.1 Addition Reactions of Benzenes to Give Nonaromatic Compounds: Hydrogenation p. 576
- 13.2 Diels-Alder Reactions p. 578
- 13.3 Other Addition Reactions p. 580
- 13.4 Substitution Reactions of Benzene p. 582
- 13.5 Electrophilic Aromatic Substitution p. 585
- 13.6 The Friedel-Crafts Alkylation Reaction p. 589
- 13.7 Friedel-Crafts Acylation p. 593
- 13.8 Stable Carbocations in "Superacid" p. 596
- 13.9 Summary of Simple Aromatic Substitution: What We Can Do So Far p. 598
- 13.10 Disubstituted Benzenes: Ortho, Meta, and Para Substitution p. 602
- 13.11 Inductive Effects in Aromatic Substitution p. 614
- 13.12 Polysubstitution of Aromatic Compounds and Synthesis of Multiply Substituted Benzenes p. 617
- 13.13 Nucleophilic Aromatic Substitution p. 622
- 13.14 Benzyne p. 625
- 13.15 Biological Synthesis of Aromatic Rings: Phenylalanine p. 627
- 13.16 Summary p. 630
- 13.17 Additional Problems p. 633
- Chapter 14. Analytical Chemistry p. 637
- 14.1 Chromatography p. 638
- 14.2 Mass Spectrometry p. 641
- 14.3 Infrared Spectroscopy p. 649
- 14.4 Nuclear Magnetic Resonance Spectroscopy p. 656
- 14.5 Survey of NMR Spectra of Organic Molecules p. 666
- 14.6 Spin-Spin Coupling: The Coupling Constant, J p. 670
- 14.7 More Complicated Spectra p. 678
- 14.8 Decoupled Spectra p. 682
- 14.9 Nuclear Magnetic Resonance Spectra of Other Nuclei p. 684
- 14.10 Determination of the Structure of a Complex Biomolecule: Maitotoxin p. 685
- 14.11 Dynamic NMR p. 686
- 14.12 Summary p. 690

- 14.13 Additional Problems p. 691
- Chapter 15. Carbonyl Chemistry 1: Addition Reactions p. 701
- 15.1 Structure of the Carbon-Oxygen Double Bond p. 701
- 15.2 Nomenclature of Carbonyl Compounds p. 704
- 15.3 Physical Properties of Carbonyl Compounds p. 707
- 15.4 Spectroscopy of Carbonyl Compounds p. 707
- 15.5 Reactions of Carbonyl Compounds: Simple Reversible Additions p. 710
- 15.6 Equilibrium in Addition Reactions p. 715
- 15.7 Other Addition Reactions: Additions of Cyanide and Bisulfite p. 720
- 15.8 Addition Reactions Followed by Water Loss: Acetal and Ketal Formation p. 721
- 15.9 Addition Reactions of Nitrogen Bases: Imine and Enamine Formation p. 727
- 15.10 Organometallic Reagents p. 734
- 15.11 Irreversible Addition Reactions p. 737
- 15.12 Oxidation of Alcohols to Carbonyl Compounds p. 742
- 15.13 The Wittig Reaction p. 745
- 15.14 Biological Oxidation p. 748
- 15.15 Summary p. 751
- 15.16 Additional Problems p. 756
- Chapter 16. The Chemistry of Alcohols Summarized and Extended: Glycols, Ethers, and Related Sulfur Compounds p. 761
- 16.1 Nomenclature p. 762
- 16.2 Structure of Alcohols p. 763
- 16.3 Physical Properties of Alcohols p. 764
- 16.4 Spectroscopic Properties of Alcohols p. 765
- 16.5 Acid and Base Properties of Alcohols p. 766
- 16.6 Reactions of Alcohols p. 770
- 16.7 Syntheses of Alcohols p. 777
- 16.8 Dialcohols: Diols or Glycols p. 779
- 16.9 Ethers p. 785
- 16.10 Syntheses of Ethers p. 787
- 16.11 Reactions of Ethers p. 791
- 16.12 Thiols (Mercaptans) and Thioethers (Sulfides) p. 797
- 16.13 Reactions and Syntheses of Thiols and Sulfides p. 799
- 16.14 Crown Ethers p. 804
- 16.15 Summary p. 806
- 16.16 Additional Problems p. 812
- Chapter 17. Carbonyl Chemistry 2: Reactions at the [alpha]-Position p. 817
- 17.1 Aldehydes and Ketones Are Weak Bronsted Acids p. 818
- 17.2 Reactions of Enols and Enolates p. 828
- 17.3 Condensation Reactions of Carbonyl Compounds: The Aldol Condensation p. 840
- 17.4 Reactions Related to the Aldol Condensation p. 850
- 17.5 Problem Solving p. 862
- 17.6 Carbonyl Compounds without [alpha]-Hydrogens: Magid's Third Rule p. 865
- 17.7 The Aldol Condensation in the Real World: Introduction to Modern Synthesis p. 871
- 17.8 Summary p. 875

- 17.9 Additional Problems p. 879
- Chapter 18. Carboxylic Acids p. 887
- 18.1 Nomenclature and Properties of Carboxylic Acids p. 888
- 18.2 Structure of Carboxylic Acids p. 890
- 18.3 Infrared and Nuclear Magnetic Resonance Spectra of Carboxylic Acids p. 891
- 18.4 Acidity and Basicity of Carboxylic Acids p. 892
- 18.5 Reactions of Carboxylic Acids p. 896
- 18.6 Reactivity of Carboxylic Acids at the [alpha]-Position p. 917
- 18.7 Syntheses of Carboxylic Acids p. 923
- 18.8 Fatty Acids p. 925
- 18.9 Summary p. 928
- 18.10 Additional Problems p. 932
- Chapter 19. Derivatives of Carboxylic Acids: Acyl Compounds p. 937
- 19.1 Nomenclature p. 938
- 19.2 Physical Properties and Structures of Acyl Compounds p. 943
- 19.3 Spectral Characteristics p. 947
- 19.4 Reactions of Acid Chlorides p. 949
- 19.5 Reactions of Anhydrides p. 953
- 19.6 Addition-Elimination Reactions of Esters p. 955
- 19.7 Reactions of Amides p. 960
- 19.8 Reactions of Nitriles p. 963
- 19.9 Reactions of Ketenes p. 966
- 19.10 Enolate Chemistry of Esters: The Claisen and Related Condensation Reactions p. 967
- 19.11 Variations on the Claisen Condensation p. 974
- 19.12 Forward and Reverse Claisen Condensations in Biology p. 979
- 19.13 Reactions of [beta]-Keto Esters p. 982
- 19.14 Complicated "Fun in Base" Problems p. 988
- 19.15 New Synthetic Routes to Acyl Compounds p. 989
- 19.16 Thermal Elimination Reactions of Esters p. 994
- 19.17 Summary p. 998
- 19.18 Additional Problems p. 1004
- Chapter 20. Introduction to the Chemistry of Nitrogen-Containing Compounds: Amines p. 1011
- 20.1 Nomenclature p. 1012
- 20.2 Structure and Physical Properties of Amines p. 1016
- 20.3 Spectroscopic Properties of Amines p. 1020
- 20.4 Acid and Base Properties of Amines p. 1021
- 20.5 Reactions of Amines p. 1026
- 20.6 Syntheses of Amines p. 1038
- 20.7 Alkaloids p. 1047
- 20.8 Synthesis of Quinine p. 1051
- 20.9 Phase-Transfer Catalysis: Ammonium Ions in Synthesis p. 1052
- 20.10 Summary p. 1054
- 20.11 Additional Problems p. 1058
- Chapter 21. Aromatic Transition States: Orbital Symmetry p. 1063

- 21.1 Concerted Reactions p. 1064
- 21.2 Electrocyclic Reactions p. 1066
- 21.3 Cycloaddition Reactions p. 1075
- 21.4 Sigmatropic Shift Reactions p. 1081
- 21.5 Sigmatropic Shifts of Carbon p. 1091
- 21.6 Other Sigmatropic Shifts p. 1095
- 21.7 A Biological Cope Rearrangement p. 1099
- 21.8 A Molecule with a Fluxional Structure p. 1100
- 21.9 Summary p. 1108
- 21.10 Additional Problems p. 1110
- Chapter 22. Introduction to Polyfunctional Compounds: Intramolecular Reactions and Neighboring Group Participation p. 1117
- 22.1 Heteroatoms as Neighboring Groups p. 1119
- 22.2 Neighboring [pi] Systems p. 1132
- 22.3 Single Bonds as Neighboring Groups p. 1146
- 22.4 Coates' Cation p. 1156
- 22.5 A Family of Concerted Rearrangements of Acyl Compounds p. 1157
- 22.6 Summary p. 1163
- 22.7 Additional Problems p. 1165
- Chapter 23. Polyfunctional Natural Products: Carbohydrates p. 1169
- 23.1 Nomenclature and Structure p. 1170
- 23.2 Reactions of Sugars p. 1181
- 23.3 The Ring Size in Glucose p. 1196
- 23.4 The Fischer Determination of the Structure of D-Glucose (and the 15 Other Aldohexoses) p. 1197
- 23.5 An Introduction to Di- and Polysaccharides p. 1205
- 23.6 Summary p. 1211
- 23.7 Additional Problems p. 1213
- Chapter 24. Introduction to the Chemistry of Heterocyclic Molecules p. 1215
- 24.1 Three-Membered Heterocycles: Oxiranes (Epoxides), Thiiranes (Episulfides), and Aziridines p. 1216
- 24.2 Four-Membered Heterocycles: Oxetanes, Thietanes, and Azetidines p. 1224
- 24.3 Five- and Six-Membered Heterocycles p. 1225
- 24.4 Nonaromatic Heterocycles Containing More Than One Heteroatom p. 1227
- 24.5 Nitrogen-Containing Aromatic Heterocyclic Compounds p. 1230
- 24.6 Other Aromatic Heterocycles: Furan and Thiophene p. 1244
- 24.7 Aromatic Heterocycles Containing More Than One Heteroatom p. 1247
- 24.8 Two-Ring Heterocycles p. 1247
- 24.9 Bioactive Heterocycles: Penicillin and Related Antibiotics p. 1253
- 24.10 Summary p. 1257
- 24.11 Additional Problems p. 1263
- Chapter 25. Introduction to Amino Acids and Polyamino Acids (Peptides and Proteins) p. 1269
- 25.1 Amino Acids p. 1270
- 25.2 Reactions of Amino Acids p. 1282
- 25.3 Peptide Chemistry p. 1284

- 25.4 Nucleosides, Nucleotides, and Nucleic Acids p. 1305
- 25.5 Summary p. 1310
- 25.6 Additional Problems p. 1314
- Key Terms p. 1
- Some Commonly Used Abbreviations p. 22
- Index p. 23
