Table of contents

- **Foreword**
- **Preface**
- **Preface to the first edition**
- **1 An Introduction to BEMS**
- **1.1 Intelligent Buildings**
- **1.2 The Development of BEMSs**
- **1.3 Some Benefits of BEMS**
- **1.4 Case Studies**
- **1.5 Commissioning**
- **1.6 Occupant Feedback**
- **1.7 Future Developments**
- **References**
- **2 The Outstation**
- **2.1 Elements of an Outstation**
- **2.2 Intelligent Outstations**
- **2.3 Microprocessor**
- **2.4 Memory**
- **2.5 Operation**
- **2.6 Direct Digital Control**
- **2.7 Input Unit**
- **2.8 Sampling**
- **2.9 Output Section**
- **2.10 Configuration**
- **References**
- **3 The BEMS Central Station**
- **3.1 Central Station Basics**
- **3.2 Secondary Memory**
- **3.3 Monitors**
- **3.4 Printers**
- **3.5 Mouse**
- **3.6 Expansion**
- **3.7 Connections**
- **3.8 Modems**
- **3.9 Networks Buses and Structured Cabling**
- **3.10 Network Topology**
- **3.11 Software**
- **3.12 Compatibility, Communications and Standards**
- **References**
- **4 Sensors and their Reponses**
- **4.1 Binary and Pulse Inputs**
- **4.2 Temperature Sensors**
- **4.3 Setting Up Sensors**
- **4.4 Block Diagrams of the Sensor**
- **4.5 Interference**

- **4.6 Sensor Dynamic Reponse**
- **4.7 Measurement Errors**
- **4.8 Comfort**
- **4.9 Smart Sensors**
- **References**
- **5 Basic and Fuzzy Logic Control**
- **5.1 The Need for Control**
- **5.2 On/Off Control**
- **5.3 Binary Drivers**
- **5.4 System Dynamics**
- **5.5 Laplace and z-Transforms**
- **5.6 Dead Time and Distance-Velocity Lag**
- **5.7 Reation Rate and Cycling**
- **5.8 Condition and Logic Control**
- **5.9 Fuzzy Logic Control**
- **References**
- **6 PID Three-Term Direct Digital Control**
- **6.1 Proportional Control**
- **6.2 Time Proportional Control**
- **6.3 Proportional Plus Integral (PI) Control**
- **6.4 PID Control**
- **6.5 Discrete-Time PID Algorithms**
- **6.6 Stability**
- **6.7 Configuring a PID Loop for Stability**
- **References**
- **7 Building Heat Loss and Heating**
- **7.1 Heat Loss**
- **7.2 Temperature Relationship**
- **7.3 Heat Loss Resistance Network**
- **7.4 U-Valve or Overall Thermal Transmittance**
- **7.5 Infiltration and Ventilation Loss**
- **7.6 Total Buildings Heat Loss**
- **7.7 Heating System Design**
- **7.8 Intermittent Heating**
- **References**
- **8 Compensation**
- **8.1 Fundamentals**
- **8.2 The Compensator Circuit**
- **8.3 BEMS Compensator Loop**
- **8.4 Alternative Compensator Loop Control**
- **8.5 Inside Air Temperature Variation**
- **8.6 Variation of Heating System Output**
- **8.7 The Ideal Schedule**
- **8.8 Plant Size Implications**
- **8.9 Internal Gains**
- **8.10 Inside Temperature and Cascade Control**

- **8.11 Three-Port Valve**
- **References**
- **9 Optimizer Control**
- **9.1 Optimizer Development**
- **9.2 Self-Adapting Optimizers**
- **9.3 Non-Linear Algorithms**
- **9.4 An Optimizer Model**
- **9.5 Preheat Time**
- **9.6 Plant Size**
- **9.7 Weekend Shutdown**
- **9.8 Influence of Thermal Mass**
- **9.9 Emitter Output**
- **9.10 Birtles and John's Equation**
- **9.11 Supervisory Jacket**
- **9.12 Savings with Optimizer Loops**
- **References**
- **10 Control of Air Conditioning**
- **10.1 Control from the Supply Air Temperature**
- **10.2 Control from the Room Air Temperature (return duct)**
- **10.3 Control from the Reset Room (return**
