

- List of contributors p. xii
- Preface p. xvi
- Notation p. xviii
- 1 Cement manufacture Wieslaw Kurdowski p. 1
  - 1.1 Introduction p. 1
  - 1.2 Raw material preparation p. 2
  - 1.3 Raw material crushing p. 2
  - 1.4 Raw material grinding p. 3
  - 1.5 Classifiers p. 4
  - 1.6 Homogenization p. 5
  - 1.7 Clinker burning p. 7
  - 1.8 Coolers p. 13
  - 1.9 Cement grinding p. 16
  - 1.10 Automation p. 18
  - 1.11 Environmental protection p. 20
  - 1.12 Acknowledgements p. 23
  - 1.13 References p. 23
- 2 Composition of cement phases Herbert Pollman p. 25
  - 2.1 Introduction p. 25
  - 2.2 Simple oxides, elements and their potential role in cement chemistry p. 27
  - 2.3 Calcium silicates p. 27
  - 2.4 Aluminium silicates, calcium aluminium silicates, their properties and occurrence in cements p. 34
  - 2.5 Calcium aluminates p. 35
  - 2.6 Calcium aluminium ferrites p. 38
  - 2.7 Influence of minor components (alone or in combinations) - alkalis, MgO, SO<sub>3</sub>, phosphates, fluorides, borates, chlorine, titanium, heavy metals p. 41
  - 2.8 Increased MgO content p. 41
  - 2.9 Sulphate-containing phases p. 41
  - 2.10 Chlorine-containing phases p. 41
  - 2.11 Phosphate in cement p. 44
  - 2.12 Heavy metals in cement p. 46
  - 2.13 Elements used as fluxes (boron and fluorine) p. 46
  - 2.14 Quantification of cementitious materials by Rietveld method p. 50
  - 2.15 Acknowledgements p. 51
  - 2.16 References p. 51
- 3 Hydration of Portland cement E. M. Gartner and J. F. Young and D. A. Damidot and I. Jawed p. 57
  - 3.1 Introduction p. 57
  - 3.2 Hydration of tricalcium silicate p. 57
  - 3.3 Hydration of dicalcium silicate p. 78
  - 3.4 Hydration of tricalcium aluminate p. 81
  - 3.5 Hydration of the ferrite phase p. 87
  - 3.6 Hydration of Portland cement p. 89

- 3.7 Microstructure of hardened paste p. 100
- 3.8 Appendix - Glossary of terms p. 108
- 3.9 References p. 108
- 4 Calcium aluminat cements John Bensted p. 114
- 4.1 Introduction p. 114
- 4.2 Manufacture p. 115
- 4.3 Phase composition p. 116
- 4.4 Physical properties p. 117
- 4.5 Hydration p. 118
- 4.6 Admixtures p. 123
- 4.7 Blends with other materials p. 124
- 4.8 Low-temperature applications p. 126
- 4.9 High-temperature applications p. 126
- 4.10 Hydrophobic applications p. 127
- 4.11 Durability p. 127
- 4.12 Safe usage of CACs p. 130
- 4.13 Concrete society report in the UK on CACs p. 133
- 4.14 CAC and structures p. 134
- 4.15 Further comments on sulphate resistance p. 134
- 4.16 Thermal analysis methods for assessing CAC conversion p. 136
- 4.17 Further comments p. 136
- 4.18 Conclusion p. 137
- 4.19 Acknowledgements p. 138
- 4.20 References p. 138
- 5 Properties of concrete with mineral and chemical admixtures S. Chandra p. 140
- 5.1 Introduction p. 140
- 5.2 Binders p. 141
- 5.3 Interrelation of cement properties to concrete p. 142
- 5.4 Hydration of cementitious materials p. 143
- 5.5 Superplasticizers p. 150
- 5.6 Interfacial transition zones (ITZ) p. 156
- 5.7 Durability properties p. 163
- 5.8 Engineering properties p. 168
- 5.9 Need for development of long-term test methods p. 178
- 5.10 Concluding remarks p. 179
- 5.11 Acknowledgements p. 180
- 5.12 References p. 180
- 6 Special cements A. K. Chatterjee p. 186
- 6.1 Introduction p. 186
- 6.2 Prior reviews and past definitions p. 186
- 6.3 Drivers for special cement development p. 188
- 6.4 Construction cements with enhanced durability potential p. 189
- 6.5 Cement formulations with improved engineering properties p. 206
- 6.6 Cementitious products for environmental benefits p. 218

- 6.7 Simultaneous production of energy and cement p. 224
- 6.8 Cements with high energy conservation potential p. 226
- 6.9 Miscellaneous hydraulic and chemical cements p. 231
- 6.10 Conclusion p. 232
- 6.11 References p. 233
- 7 Developments with oilwell cements John Bensted p. 237
- 7.1 Introduction p. 237
- 7.2 ISO classes and grades p. 238
- 7.3 Relevant ISO standards p. 239
- 7.4 Brief comments on the ISO cementing standards p. 239
- 7.5 Effects of different conditions p. 240
- 7.6 Some other interesting phenomena with Class G and H cements p. 241
- 7.7 Cementing in hostile environments p. 242
- 7.8 Cements for some given well types p. 244
- 7.9 Alternatives to standard Class G and H cements p. 246
- 7.10 Conclusion p. 251
- 7.11 Acknowledgements p. 251
- 7.12 References p. 251
- 8 Gypsum in cements John Bensted p. 253
- 8.1 Introduction p. 253
- 8.2 The calcium sulphate-water system p. 253
- 8.3 The role of gypsum in set regulation of Portland cement-based systems p. 255
- 8.4 Gypsum quality p. 257
- 8.5 By-product gypsums p. 258
- 8.6 Flash set p. 260
- 8.7 False set p. 260
- 8.8 Air set p. 261
- 8.9 Portland cement-calcium aluminate cement compositions p. 262
- 8.10 Calcium sulphoaluminate cements p. 262
- 8.11 Conclusion p. 263
- 8.12 References p. 263
- 9 Alkali--silica reaction in concrete D. W. Hobbs p. 265
- 9.1 Introduction p. 265
- 9.2 The reaction p. 265
- 9.3 Mechanism of expansion p. 266
- 9.4 Concretes affected p. 267
- 9.5 Visual and internal cracking induced by ASR p. 267
- 9.6 Pessimism behaviour p. 269
- 9.7 Sources of alkali p. 270
- 9.8 Reactive silica p. 271
- 9.9 Diagnosis of ASR as the cause of visual cracking p. 272
- 9.10 Factors influencing expansion p. 273
- 9.11 Concluding remarks p. 280
- 9.12 References p. 280

- 10 Delayed ettringite formation C. Famy and K. L. Scrivener and H. F. W. Taylor p. 282
- 10.1 Introduction p. 282
- 10.2 DEF in field concretes p. 282
- 10.3 Coarse microstructure of materials damaged by DEF p. 283
- 10.4 Macroscopic properties associated with DEF p. 283
- 10.5 Effect of cement composition p. 284
- 10.6 Cement hydration at 70-100[degree]C p. 284
- 10.7 Chemistry of changes after cooling to ambient temperatures p. 286
- 10.8 Paste microstructure in materials cured at elevated temperature p. 287
- 10.9 Expansion p. 288
- 10.10 Conclusions p. 292
- 10.11 Acknowledgements p. 293
- 10.12 References p. 293
- 11 Chloride corrosion in cementitious system Wieslaw Kurdowski p. 295
- 11.1 Introduction p. 295
- 11.2 Chloride ions diffusion in cement paste p. 295
- 11.3 Binding capacity of chloride ions in cement paste p. 297
- 11.4 Factors influencing the diffusion of chloride ions in the cement paste p. 298
- 11.5 Mechanism of cement paste destruction in the chloride medium p. 300
- 11.6 Chloride-induced corrosion of reinforcement in concrete p. 306
- 11.7 References p. 308
- 12 Blastfurnace cements E. Lang p. 310
- 12.1 History p. 310
- 12.2 Slag composition and reactivity p. 310
- 12.3 Grindability p. 313
- 12.4 Blastfurnace cement characterization p. 314
- 12.5 Durability p. 318
- 12.6 References p. 323
- 13 Properties and applications of natural pozzolanas F. Massazza p. 326
- 13.1 Introduction p. 326
- 13.2 Classification of natural pozzolanas p. 326
- 13.3 Pozzolana--lime mixes p. 328
- 13.4 Pozzolana-containing cements p. 335
- 13.5 Conclusions p. 348
- 13.6 References p. 348
- 14 Pulverized fuel ash as a cement extender Karen Luke p. 353
- 14.1 Introduction p. 353
- 14.2 PFA formation p. 354
- 14.3 Characteristics of PFA p. 355
- 14.4 Role of PFA on performance of extended systems p. 357
- 14.5 References p. 369
- 15 Metakaolin as a pozzolanic addition to concrete Tom R. Jones p. 372
- 15.1 Introduction p. 372
- 15.2 Structure of metakaolin (mk) p. 373

- 15.3 Pozzolanic reactions of mk p. 374
- 15.4 Effect of mk on the basic properties of PC concrete p. 378
- 15.5 Effect of mk on the properties of uncured concrete p. 381
- 15.6 Effect of mk on the properties of hardened concrete p. 385
- 15.7 Durability of mk concrete p. 389
- 15.8 Metakaolin in engineering concrete p. 393
- 15.9 Acknowledgements p. 395
- 15.10 References p. 395
- 16 Condensed silica fume as a cement extender H. Justnes p. 399
- 16.1 Introduction p. 399
- 16.2 Physical effects p. 399
- 16.3 Chemical effects p. 401
- 16.4 Conclusions p. 407
- 16.5 References p. 407
- 17 Cement-based composite micro-structures Stephen P. Bailey and David O'Connor and Sally L. Colston and Paul Barnes and Herbert Freimuth and Wolfgang Ehrfeld p. 409
- 17.1 Introduction p. 409
- 17.2 Cement-composite development p. 411
- 17.3 Micro-mould design p. 412
- 17.4 Mould fabrication p. 412
- 17.5 MSCCD applications p. 413
- 17.6 MSCCD production p. 415
- 17.7 Quality of MSCCD features p. 416
- 17.8 Conclusions p. 419
- 17.9 Acknowledgements p. 419
- 17.10 References p. 419
- 18 X-ray powder diffraction analysis of cements J. C. Taylor and L. P. Aldridge and C. E. Matulis and I. Hinczak p. 420
- 18.1 Introduction p. 420
- 18.2 X-ray diffraction from cement p. 421
- 18.3 Qualitative analysis of cements p. 422
- 18.4 The method of X-ray diffraction p. 423
- 18.5 Physical factors affecting XRD quantitative analysis p. 425
- 18.6 Choice of radiation in cement XRD studies p. 427
- 18.7 Amorphous (non-diffracting) content p. 427
- 18.8 Background intensity p. 429
- 18.9 Rietveld refinement of OPC XRD patterns p. 429
- 18.10 Refinement strategy for Rietveld XRD assays of cements p. 432
- 18.11 Errors in Rietveld quantifications p. 434
- 18.12 Crystal structure analysis of Portland cement phases by the Rietveld method p. 434
- 18.13 Quantitative analysis of hydrating phases p. 435
- 18.14 Recent Rietveld studies of real cements p. 436
- 18.15 Conclusions p. 437
- 18.16 References p. 437

- 19 Electrical monitoring methods in cement science W. J. McCarter and G. Starrs and T. M. Chrisp p. 442
- 19.1 Introduction p. 442
- 19.2 Immittance formalisms p. 442
- 19.3 Application of electrical measurements p. 446
- 19.4 Concluding remarks p. 453
- 19.5 Acknowledgements p. 454
- 19.6 References p. 454
- 20 Nuclear magnetic resonance spectroscopy and magnetic resonance imaging of cements and cement-based materials Jorgen Skibsted and Christopher Hall and Hans J. Jakobsen p. 457
- 20.1 Introduction p. 457
- 20.2 Solid-state NMR methods p. 458
- 20.3 Structure and bonding in cement minerals p. 462
- 20.4 Proton relaxation and pore structure p. 467
- 20.5 Other nuclei p. 469
- 20.6 Magnetic resonance imaging p. 469
- 20.7 References p. 472
- 21 The use of synchrotron sources in the study of cement materials Paul Barnes and Sally L. Colston and A. C. Jupe and S. D. M. Jacques and M. Atfield and R. Pisula and S. Morgan and C. Hall and P. Livesey and S. Lunt p. 477
- 21.1 Introduction p. 477
- 21.2 The synchrotron p. 477
- 21.3 High quality/resolution powder diffraction p. 479
- 21.4 Single crystal micro-diffraction p. 482
- 21.5 Energy-dispersive powder diffraction p. 483
- 21.6 Extended X-ray absorption fine structure p. 494
- 21.7 X-ray microscopy p. 495
- 21.8 Tomographic energy-dispersive diffraction imaging p. 495
- 21.9 Conclusions p. 498
- 21.10 Acknowledgements p. 498
- 21.11 References p. 498
- 22 Electron microscopy of cements I. G. Richardson p. 500
- 22.1 General introduction p. 500
- 22.2 Historical context p. 500
- 22.3 Electron microscopy p. 511
- 22.4 Transmission electron microscopy of cement p. 511
- 22.5 High resolution transmission electron microscopy of cement hydrate phases p. 520
- 22.6 Scanning electron microscopy of cement p. 523
- 22.7 Low-temperature and environmental electron microscopy of cement p. 532
- 22.8 Analytical electron microscopy using X-rays p. 533
- 22.9 Analytical transmission electron microscopy (TEM-EDX/EELS) p. 534
- 22.10 Electron microscopy of cement p. 540
- 22.11 References p. 542
- Index p. 557
