

- Preface p. ix
- 1 Introduction to modelling p. 1
- 1.1 Introduction p. 1
- 1.2 Empirical models p. 1
- 1.2.1 Vane strength correction p. 2
- 1.2.2 Consolidation settlement p. 4
- 1.2.3 Cone penetration test and settlement of footings on sand p. 8
- 1.2.4 Pressuremeter p. 11
- 1.3 Theoretical models p. 14
- 1.3.1 Steady seepage p. 14
- 1.4 Numerical modelling p. 17
- 1.5 Constitutive modelling p. 18
- 1.6 Physical models p. 20
- 1.6.1 Physical models: full-scale p. 21
- 1.6.2 Physical models: small-scale p. 24
- 1.7 Geological model p. 26
- 1.8 Classification model p. 28
- 1.9 Conclusion p. 32
- 2 Characteristics of soil behaviour p. 35
- 2.1 Introduction p. 35
- 2.2 Particle-continuum duality p. 36
- 2.3 Laboratory element testing p. 44
- 2.4 Stress and strain variables p. 50
- 2.5 Stiffness p. 61
- 2.5.1 Nonlinearity: secant and tangent stiffness p. 61
- 2.5.2 Stiffness and strain measurement p. 67
- 2.5.3 Stiffness and history: stress response envelopes p. 69
- 2.5.4 Anisotropy of stiffness p. 75
- 2.6 Dilatancy p. 82
- 2.6.1 Critical states: state variable p. 86
- 2.6.2 Pore pressure parameter p. 88
- 2.7 Strength p. 89
- 3 Constitutive modelling p. 97
- 3.1 Introduction p. 97
- 3.2 Elastic models p. 98
- 3.2.1 Conventional drained triaxial compression test p. 103
- 3.2.2 Conventional undrained triaxial compression test p. 103
- 3.2.3 Measurement of elastic parameters with different devices p. 105
- 3.2.4 Anisotropy p. 107
- 3.2.5 Nonlinearity p. 112
- 3.2.6 Heterogeneity p. 116
- 3.3 Elastic-perfectly plastic models p. 117
- 3.3.1 General elastic-perfectly plastic model p. 119
- 3.3.2 A digression: collapse of portal frame p. 120

- 3.3.3 General elastic-perfectly plastic model (continued) p. 123
- 3.3.4 Elastic-perfectly plastic Mohr-Coulomb model p. 124
- 3.4 Elastic-hardening plastic models p. 133
- 3.4.1 Extended Mohr-Coulomb model p. 137
- 3.4.2 Cam clay p. 153
- 3.5 Modelling non-monotonic loading p. 166
- 3.6 Modelling cementation and structure p. 168
- 3.7 Modelling rate effects p. 169
- 3.8 Design of programmes of laboratory tests p. 172
- 3.9 Selection of soil parameters: calibration of models p. 178
- 4 Numerical modelling p. 181
- 4.1 Introduction p. 181
- 4.2 Field problems p. 182
- 4.2.1 One-dimensional problem p. 182
- 4.2.2 Two-dimensional problem p. 185
- 4.3 One-dimensional finite elements p. 187
- 4.4 Two-dimensional finite elements p. 190
- 4.4.1 Example: Constant strain triangle p. 192
- 4.4.2 Example: Linear strain triangle p. 193
- 4.5.1 Reduced integration p. 200
- 4.4.3 Quadrilateral elements p. 195
- 4.4.4 Comparison of elements p. 197
- 4.5 Integration--Gauss points p. 199
- 4.6 Nodal forces and external loads p. 202
- 4.7 Dynamic analysis p. 204
- 4.8 Finite differences p. 206
- 4.9 Solution schemes p. 211
- 4.10 Conduct of numerical modelling p. 217
- 4.10.1 Verification: Is the program doing what it claims to be doing? p. 218
- 4.10.2 Are we getting the answers that we think we are getting? p. 220
- 4.10.3 Validation: Are we getting the answers that we need? p. 222
- 4.10.4 Exercise in numerical modelling: FLAC analysis of footing on Mohr-Coulomb soil p. 225
- 4.11 Closure p. 231
- 5 Physical modelling p. 233
- 5.1 Introduction p. 233
- 5.2 Dimensional analysis p. 234
- 5.2.1 Slope in cohesive soil p. 234
- 5.2.2 Fall-cone p. 237
- 5.2.3 Consolidation p. 237
- 5.2.4 Fluid drag p. 238
- 5.2.5 Settlement of a footing p. 240
- 5.2.6 Bearing capacity of a footing p. 243
- 5.2.7 Soil nonlinearity p. 245

- 5.3 Scaling laws revisited p. 246
- 5.3.1 Length p. 248
- 5.3.2 Density p. 248
- 5.3.3 Acceleration p. 249
- 5.3.4 Stiffness p. 250
- 5.3.5 Strain p. 251
- 5.3.6 Displacement p. 252
- 5.3.7 Permeability p. 253
- 5.3.8 Hydraulic gradient p. 254
- 5.3.9 Time scales p. 255
- 5.3.10 Shear wave velocity p. 257
- 5.4 Soil-structure interaction p. 258
- 5.4.1 Footing p. 258
- 5.4.2 Pile under lateral loading p. 259
- 5.4.3 Flexible retaining wall p. 262
- 5.4.4 Buried flexible culvert p. 263
- 5.4.5 Piles under axial load p. 265
- 5.4.6 Dynamic soil-structure interaction p. 266
- 5.5 Single gravity modelling p. 267
- 6 Centrifuge modelling p. 269
- 6.1 Introduction p. 269
- 6.2 Mechanics of centrifuge modelling p. 269
- 6.3 Centrifuges p. 274
- 6.4 Model preparation p. 281
- 6.5 Geotechnical processes p. 284
- 6.6 Pore fluid p. 294
- 6.7 Site investigation p. 296
- 6.8 Instrumentation p. 299
- 6.9 Modelling and testing p. 304
- 6.10 Closure p. 307
- 7 Theoretical modelling p. 309
- 7.1 Introduction p. 309
- 7.2 Elastic stress distributions p. 310
- 7.3 Plastic failure analysis p. 314
- 7.3.1 Bound theorems p. 315
- 7.3.2 Structural example p. 315
- 7.3.3 Continuum problems--Mohr's circle p. 318
- 7.3.4 Bearing capacity of cohesive soil p. 319
- 7.3.5 Wall retaining cohesive soil p. 331
- 7.5 Macroelement models p. 360
- 7.3.6 Bearing capacity of frictional soil p. 334
- 7.4 One-dimensional consolidation p. 344
- 7.4.1 Parabolic isochrones p. 349
- 7.4.2 General power law approximate solution p. 351

- 7.4.3 Pore pressures for stability analysis of embankment on soft clay p. 352
- 7.5.1 Box model p. 360
- 7.5.2 Wall model p. 371
- 7.5.3 Footing model p. 375
- 7.5.4 Extended Newmark sliding block model p. 381
- 7.6 Closure p. 385
- 8 Soil-structure interaction p. 387
- 8.1 Introduction p. 387
- 8.2 Elastic analyses p. 387
- 8.2.1 Beam on elastic foundation p. 387
- 8.2.2 Pile under lateral loading p. 393
- 8.2.3 Pile under axial loading p. 394
- 8.2.4 Piled raft p. 399
- 8.3 Serviceability calculations p. 404
- 8.4 Relative foundation stiffness p. 409
- 8.5 Downdrag on pile p. 412
- 8.6 Settlement reducing piles p. 417
- 8.7 Flexible retaining wall p. 421
- 8.8 Tunnel lining p. 429
- 8.9 Pile in displacing ground p. 435
- 8.10 Integral bridge abutment p. 445
- 8.11 Closure p. 458
- 9 Envoi p. 459
- Bibliography p. 463
- Index p. 477
