

Table of Contents

- Part I Introduction J.V. Sengers et al.
- Fundamental Considerations M.B. Ewing and C.J. Peters
- The Virial Equation of State J.P.M. Trusler
- Cubic and Generalized van der Waals Equations A. Anderko
- Perturbation Theory T. Boublik
- Equations of State from Analytically Solvable Integral-Equation Approximations Yu.V. Kalyuzhnyi and P.T. Cummings
- Quasilattice Equations of State for Molecular Fluids N.A. Smirnova and A.V. Victorov
- The Corresponding-States Principle J.F. Ely and I.M.F. Marrucho
- Mixing and Combining Rules S.I. Sandler and H. Orbey
- Mixtures of Dissimilar Molecules E. Matteoli et al.
- Critical Region M.A. Anisimov and J.V. Sengers
- Part II Associating Fluids and Fluid Mixtures E.A. Muller and K.E. Gubbins
- Polydisperse Fluids D. Browarzik and H. Kehlen
- Equations of State for Polymer Systems S.M. Lambert et al.
- Self-Assembled Systems R. Nagarajan and E. Ruckenstein
- Ionic Fluids H. Krienke and J. Barthel
- Ionic Fluids Near Critical Points and at High Temperatures J.M.H. Levelt Sengers et al.
- Multiparameter Equations of State R.T. Jacobsen et al.
- Subject index
