

- 1 The Principles of Coding in Digital Communications p. 1
- 1.1 Error Control Schemes p. 1
- 1.2 Elements of Digital Communication Systems p. 2
- 1.3 Source Encoding p. 2
- 1.4 Error Control Coding p. 3
- 1.5 Modulation p. 5
- 1.6 The Channel p. 7
- 1.7 Demodulation p. 8
- 1.7.1 Coherent demodulation p. 8
- 1.7.2 Differential demodulation p. 9
- 1.7.3 Soft-decision demodulation p. 10
- 1.8 Decoding p. 11
- 1.8.1 Encoding and decoding example p. 12
- 1.8.2 Soft-decision decoding p. 14
- 1.8.3 Alternative decoding approaches p. 15
- 1.9 Code Performance and Coding Gain p. 16
- 1.10 Information Theory Limits to Code Performance p. 18
- 1.11 Coding for Multilevel Modulations p. 21
- 1.12 Coding for Burst-Error Channels p. 22
- 1.13 Multistage Coding p. 24
- 1.14 Error Detection Based Methods p. 24
- 1.14.1 ARQ strategies p. 24
- 1.14.2 Error concealment p. 26
- 1.14.3 Error detection and correction capability of block codes p. 26
- 1.15 Selection of Coding Scheme p. 27
- 1.15.1 General considerations p. 27
- 1.15.2 Data structure p. 28
- 1.15.3 Information type p. 29
- 1.15.4 Data rate p. 29
- 1.15.5 Real time data processing p. 30
- 1.15.6 Power and bandwidth constraints p. 30
- 1.15.7 Channel error mechanisms p. 31
- 1.15.8 Cost p. 31
- 1.16 Conclusion p. 32
- 1.17 Exercises p. 33
- 1.18 References p. 34
- 2 Convolutional Codes p. 35
- 2.1 Introduction p. 35
- 2.2 General Properties of Convolutional Codes p. 35
- 2.3 Generator Polynomials p. 36
- 2.4 Terminology p. 37
- 2.5 Encoder State Diagram p. 38
- 2.6 Distance Structure of Convolutional Codes p. 39
- 2.7 Evaluating Distance and Weight Structures p. 39
- 2.8 Maximum Likelihood Decoding p. 41
- 2.9 Viterbi Algorithm p. 42

- 2.9.1 General principles p. 42
- 2.9.2 Example of viterbi decoding p. 42
- 2.9.3 Issues arising p. 45
- 2.10 Practical Implementation of Viterbi Decoding p. 45
- 2.11 Performance of Convolutional Codes p. 51
- 2.12 Good Convolutional Codes p. 53
- 2.13 Punctured Convolutional Codes p. 55
- 2.14 Applications of Convolutional Codes p. 56
- 2.15 Codes for Multilevel Modulations p. 57
- 2.16 Sequential Decoding p. 62
- 2.17 Conclusion p. 64
- 2.18 Exercises p. 64
- 2.19 References p. 66
- 3 Linear Block Codes p. 67
- 3.1 Introduction p. 67
- 3.2 Mathematics of Binary Codes p. 67
- 3.3 Parity Checks p. 68
- 3.4 Systematic Codes p. 69
- 3.5 Minimum Hamming Distance of a Linear Block Code p. 70
- 3.6 How to Encode--Generator Matrix p. 70
- 3.7 Encoding with the Parity Check Matrix p. 71
- 3.8 Decoding with the Parity Check Matrix p. 73
- 3.9 Decoding by Standard Array p. 75
- 3.10 Codec Design for Linear Block Codes p. 76
- 3.11 Modifications to Block Codes p. 78
- 3.12 Dorsch Algorithm Decoding p. 81
- 3.13 Conclusion p. 83
- 3.14 Exercises p. 83
- 3.15 References p. 85
- 4 Cyclic Codes p. 87
- 4.1 Introduction p. 87
- 4.2 Definition of a Cyclic Code p. 87
- 4.3 Example of a Cyclic Code p. 88
- 4.4 Polynomial Representation p. 88
- 4.5 Encoding by Convolution p. 89
- 4.6 Establishing the Cyclic Property p. 90
- 4.7 Deducing the Properties of a Cyclic Code p. 91
- 4.8 Primitive Polynomials p. 92
- 4.9 Systematic Encoding of Cyclic Codes p. 93
- 4.10 Syndrome of a Cyclic Code p. 94
- 4.11 Implementation of Encoding p. 94
- 4.12 Decoding p. 96
- 4.13 Decoder Operation p. 100
- 4.14 Multiple-Error Correction p. 100
- 4.15 Example of Multiple-Error Correction p. 101
- 4.16 Shortened Cyclic Codes p. 103

- 4.17 Expurgated Cyclic Codes p. 104
- 4.18 BCH Codes p. 106
- 4.19 Cyclic Codes for Burst-Error Correction p. 107
- 4.20 Conclusion p. 110
- 4.21 Exercises p. 110
- 4.22 References p. 112
- 5 Finite Field Arithmetic p. 113
- 5.1 Introduction p. 113
- 5.2 Definition of a Finite Field p. 113
- 5.3 Prime Size Finite Field $GF(p)$ p. 114
- 5.4 Extensions to the Binary Field--Finite Field $GF(2^m)$ p. 115
- 5.5 Polynomial Representation of Finite Field Elements p. 117
- 5.6 Properties of Polynomials and Finite Field Elements p. 119
- 5.6.1 Roots of a polynomial p. 119
- 5.6.2 Minimum polynomial p. 120
- 5.6.3 Order of an element p. 120
- 5.6.4 Finite field elements as roots of a polynomial p. 120
- 5.6.5 Roots of an irreducible polynomial p. 120
- 5.6.6 Factorization of a polynomial p. 121
- 5.7 Fourier Transform over a Finite Field p. 121
- 5.8 Alternative Visualization of Finite Field Fourier Transform p. 123
- 5.9 Roots and Spectral Components p. 124
- 5.10 Fast Fourier Transforms p. 125
- 5.11 Hardware Multipliers using Polynomial Basis p. 127
- 5.12 Hardware Multiplication using Dual Basis p. 129
- 5.13 Hardware Multiplication using Normal Basis p. 131
- 5.14 Software Implementation of Finite Field Arithmetic p. 132
- 5.15 Conclusion p. 134
- 5.16 Exercises p. 135
- 5.17 References p. 136
- 6 BCH Codes p. 137
- 6.1 Introduction p. 137
- 6.2 Specifying Cyclic Codes by Roots p. 137
- 6.3 Definition of a BCH Code p. 138
- 6.4 Construction of Binary BCH Codes p. 138
- 6.5 Roots and Parity Check Matrices p. 140
- 6.6 Algebraic Decoding p. 143
- 6.7 BCH Decoding and the BCH Bound p. 144
- 6.8 Decoding in the Frequency Domain p. 146
- 6.9 Decoding Examples for Binary BCH Codes p. 147
- 6.10 Polynomial Form of the Key Equation p. 149
- 6.11 Euclid's Method p. 149
- 6.12 Berlekamp-Massey Algorithm p. 151
- 6.13 Conclusion p. 152
- 6.14 Exercises p. 153
- 6.15 References p. 154

- 7 Reed Solomon Codes p. 155
- 7.1 Introduction p. 155
- 7.2 Generator Polynomial for a Reed Solomon Code p. 155
- 7.3 Time Domain Encoding for Reed Solomon Codes p. 156
- 7.4 Decoding Reed Solomon Codes p. 158
- 7.5 Reed Solomon Decoding Example p. 159
- 7.6 Frequency Domain Encoded Reed Solomon Codes p. 160
- 7.7 Further Examples of Reed Solomon Decoding p. 162
- 7.8 Erasure Decoding p. 164
- 7.9 Example of Erasure Decoding of Reed Solomon Codes p. 165
- 7.10 Generalized Minimum Distance Decoding p. 167
- 7.11 Welch-Berlekamp Algorithm p. 168
- 7.12 Singly Extended Reed Solomon Codes p. 170
- 7.13 Doubly Extended Reed Solomon Codes p. 172
- 7.14 Conclusion p. 175
- 7.15 Exercises p. 175
- 7.16 References p. 176
- 8 Performance Calculations for Block Codes p. 177
- 8.1 Introduction p. 177
- 8.2 Hamming Bound p. 177
- 8.3 Plotkin Bound p. 178
- 8.4 Griesmer Bound p. 179
- 8.5 Singleton Bound p. 180
- 8.6 Gilbert-Varsharmov Bound p. 180
- 8.7 Error Detection p. 181
- 8.8 Random-Error Detection Performance of Block Codes p. 181
- 8.9 Weight Distributions p. 182
- 8.10 Worst Case Undetected Error Rate p. 184
- 8.11 Burst-Error Detection p. 185
- 8.12 Examples of Error Detection Codes p. 185
- 8.13 Output Error Rates using Block Codes p. 186
- 8.14 Detected Uncorrectable Errors p. 188
- 8.15 Application Example - Optical Communications p. 190
- 8.16 Conclusion p. 192
- 8.17 Exercises p. 192
- 9 Multistage Coding p. 195
- 9.1 Introduction p. 195
- 9.2 Serial Concatenation p. 195
- 9.3 Serial Concatenation using Inner Block Code p. 196
- 9.3.1 Maximal length codes p. 196
- 9.3.2 Orthogonal codes p. 197
- 9.3.3 Reed Muller codes p. 198
- 9.3.4 High rate codes with soft-decision decoding p. 198
- 9.4 Serial Concatenation using Inner Convolutional Code p. 199
- 9.5 Product codes p. 200
- 9.6 Generalized Array Codes p. 203

- 9.7 Applications of Multistage Coding p. 206
- 9.8 Conclusion p. 208
- 9.9 Exercises p. 208
- 9.10 References p. 209
- 10 Iterative Decoding p. 211
- 10.1 Introduction p. 211
- 10.2 The BCJR Algorithm p. 211
- 10.3 BCJR Product Code Example p. 212
- 10.4 Use of Extrinsic Information p. 214
- 10.5 Recursive Systematic Convolutional Codes p. 215
- 10.6 MAP Decoding of RSC Codes p. 217
- 10.7 Interleaving and Trellis Termination p. 220
- 10.8 The Soft-Output Viterbi Algorithm p. 222
- 10.9 Gallager Codes p. 225
- 10.10 Serial Concatenation with Iterative Decoding p. 231
- 10.11 Performance and Complexity Issues p. 232
- 10.12 Application to Mobile Communications p. 233
- 10.13 Turbo Trellis-Coded Modulation p. 233
- 10.14 Conclusion p. 235
- 10.15 Exercises p. 235
- 10.16 References p. 236
