

- List of Figures p. xi
- List of Tables p. xvii
- About the Author p. ix
- Preface p. xxi
- Acknowledgements p. xxv
- 1 Introduction p. 1
- 1.1 What is a WDM-enabled Optical Network p. 1
- 1.1.1 TDM vs. WDM p. 2
- 1.1.2 WDM Optical Network Evolution p. 4
- 1.2 Why IP over WDM p. 6
- 1.3 What is IP over WDM p. 7
- 1.4 Next-generation Internet p. 11
- 1.5 IP/WDM Standardisation p. 14
- 1.6 Summary and Subject Overview p. 16
- 2 Review p. 19
- 2.1 Telecommunication Networks p. 19
- 2.2 Optical Communications p. 21
- 2.2.1 Optical Communication Impairments p. 23
- 2.2.2 Optical Switching p. 25
- 2.2.3 Opaque vs. Transparent Switching p. 28
- 2.3 WDM Network Testbed and Product Comparison p. 29
- 2.3.1 WDM Network Testbeds p. 29
- 2.3.2 Product Comparison p. 32
- 2.4 Communication Protocols p. 32
- 2.5 Internet Architecture p. 35
- 2.6 IPv4 Addressing p. 36
- 2.6.1 Subnetting p. 38
- 2.6.2 Unnumbered Addresses p. 39
- 2.6.3 Secondary Addresses p. 39
- 2.6.4 Classless Inter-Domain Routing (CIDR) p. 40
- 2.7 Gigabit Ethernet p. 40
- 2.7.1 Gigabit Ethernet Architecture p. 42
- 2.7.2 Gigabit Ethernet Applications p. 43
- 2.8 Multiprotocol Label Switching (MPLS) p. 44
- 2.8.1 Label Distribution p. 46
- 2.8.2 Traffic Engineering p. 48
- 2.8.3 Quality of Service (QoS) p. 49
- 2.8.4 Virtual Private Network (VPN) p. 51
- 2.9 Distributed Systems p. 52
- 2.9.1 Design Objectives p. 53
- 2.9.2 Architectural Models p. 54
- 2.9.3 Clustering p. 55
- 2.9.4 API for Distributed Applications p. 55
- 3 Characteristics of the Internet and IP Routing p. 57
- 3.1 IP Router Overview p. 57
- 3.1.1 IPv4 Datagram p. 58

- 3.1.2 QoS Queuing Models p. 61
- 3.2 Internet Traffic Engineering p. 62
- 3.2.1 Shortest Path Routing p. 62
- 3.2.2 Equal Cost Multi-Path (ECMP) p. 63
- 3.2.3 Optimised Multi-Path (OMP) p. 63
- 3.2.4 MPLS OMP p. 64
- 3.3 TCP Traffic Policing p. 64
- 3.3.1 TCP Flow Control p. 65
- 3.3.2 TCP Congestion Control p. 67
- 3.4 Internet Traffic Characteristics and Models p. 69
- 3.4.1 Internet Traffic Statistics p. 70
- 3.4.2 Traffic Models and Long Range Dependence p. 79
- 3.5 Internet Routing p. 83
- 3.6 Open Shortest Path First Protocol (OSPF) p. 85
- 3.6.1 OSPF Messages p. 86
- 3.6.2 Link State Advertisement (LSA) p. 87
- 3.6.3 Routing in OSPF p. 88
- 3.7 Border Gateway Protocol (BGP) p. 90
- 3.7.1 Internal and External BGP p. 90
- 3.7.2 BGP Messages p. 91
- 3.7.3 Path Attributes p. 93
- 3.7.4 Policy Filtering p. 94
- 3.7.5 BGP Routing p. 94
- 3.8 IPv6 p. 95
- 4 WDM Optical Networks p. 99
- 4.1 Optical Modulation p. 99
- 4.2 Optical Switching Components and Technology p. 101
- 4.2.1 Optical Amplifier (OAMP) and Repeater p. 101
- 4.2.2 Optical Add/Drop Multiplexer (OADM) p. 102
- 4.2.3 Optical Crossconnect (OXC) p. 102
- 4.2.4 Transponder p. 104
- 4.2.5 Switching Fabric p. 105
- 4.2.6 Optical Switch/Router p. 111
- 4.3 WDM NC&M Framework p. 113
- 4.3.1 TMN Framework p. 113
- 4.3.2 WDM Network Management and Visualisation Framework p. 116
- 4.4 WDM Network Information Model p. 119
- 4.4.1 WDM Object Model p. 120
- 4.4.2 An Example of WDM Network and Connection MIB p. 123
- 4.5 WDM NC&M Functionality p. 126
- 4.5.1 Connection Management p. 126
- 4.5.2 Connection Discovery p. 139
- 4.5.3 WDM Client Topology Reconfiguration p. 140
- 4.5.4 Signal Quality Monitoring p. 141
- 4.5.5 Fault Management p. 142
- 4.6 WDM NE Management p. 143

- 4.6.1 NE MIB p. 145
- 4.6.2 NE Interfaces p. 147
- 4.7 WDM Signalling p. 147
- 4.7.1 Wavelength Signalling and Routing p. 147
- 4.7.2 Circuit Switching vs. Just-In-Time (JIT) Burst Switching p. 148
- 4.8 WDM DCN p. 151
- 4.9 WDM Network Views p. 152
- 4.10 Discussion p. 154
- 5 IP over WDM p. 155
- 5.1 IP over WDM Networking Architectures p. 155
- 5.1.1 What is Optical Burst Switching p. 156
- 5.1.2 What is Optical Packet Switching p. 157
- 5.1.3 Three IP/WDM Networking Architectures p. 158
- 5.2 IP/WDM Internetworking Models p. 162
- 5.2.1 IP over Reconfigurable WDM p. 162
- 5.2.2 IP over Switched WDM p. 166
- 5.3 IP/WDM Service Models p. 169
- 5.3.1 Domain Service Model p. 169
- 5.3.2 Unified Service Model p. 171
- 5.3.3 Services p. 171
- 5.4 Summary p. 172
- 6 IP/WDM Network Control p. 175
- 6.1 IP/WDM Network Addressing p. 177
- 6.1.1 Overlay Addressing p. 178
- 6.1.2 Peer Addressing p. 180
- 6.2 Topology Discovery p. 181
- 6.2.1 OSPF Hello Message p. 182
- 6.2.2 Link Management Protocol (LMP) p. 184
- 6.3 IP/WDM Routing p. 187
- 6.3.1 Routing Information Base Construction and Maintenance p. 187
- 6.3.2 Route Computation and WDM Switching Constraints p. 189
- 6.3.3 OSPF Extensions p. 193
- 6.3.4 Routing Behaviour p. 199
- 6.3.5 Routing Scalability p. 202
- 6.4 IP/WDM Signalling p. 204
- 6.4.1 RSVP Overview p. 204
- 6.4.2 RSVP Extension for Optical Networks p. 206
- 6.4.3 RSVP Extension Implementation Architecture p. 207
- 6.4.4 RSVP Message Extensions p. 208
- 6.4.5 Hybrid Label Allocation Scheme for Optical Networks p. 212
- 6.4.6 Discussion p. 214
- 6.5 WDM Network Access Control p. 214
- 6.6 GMPLS p. 216
- 6.6.1 Discussion p. 217
- 6.7 IP/WDM Restoration p. 218
- 6.7.1 Provisioning Case Study p. 221

- 6.7.2 Restoration Case Study p. 222
- 6.8 Inter-domain Network Control p. 223
- 6.8.1 IP/WDM Network Reachability vs. Availability p. 225
- 6.8.2 Inter-domain Routing Information Exchange p. 226
- 6.9 WDM Network Element Control and Management Protocol p. 232
- 6.9.1 Simple Network Management Protocol (SNMP) p. 232
- 6.9.2 General Switch Management Protocol (GSMP) p. 233
- 6.9.3 Optical Switch Control Protocol (OSCP) p. 239
- 6.10 Summary p. 243
- 6.10.1 Network Control vs. Network Management p. 243
- 7 IP/WDM Traffic Engineering p. 245
- 7.1 What is IP over WDM Traffic Engineering p. 245
- 7.2 Modelling of IP over WDM Traffic Engineering p. 246
- 7.2.1 Overlay Traffic Engineering p. 246
- 7.2.2 Integrated Traffic Engineering p. 248
- 7.2.3 Comparison of the Two Models p. 248
- 7.3 IP over WDM Traffic Engineering Functional Framework p. 249
- 7.3.1 IP/WDM Network State Information Database p. 251
- 7.3.2 IP to WDM Interface Management p. 253
- 7.3.3 Examples of Reconfiguration Triggers p. 253
- 7.3.4 Traffic Monitoring and Measurements p. 254
- 7.3.5 Optical Signal Performance Monitoring p. 260
- 7.4 Teletraffic Modelling p. 261
- 7.4.1 Classical Telephone and Data Traffic Model p. 261
- 7.4.2 Novel Data Traffic Models p. 262
- 7.4.3 A Bandwidth Projection Model p. 263
- 7.5 MPLS Traffic Engineering p. 268
- 7.5.1 Load Balancing p. 268
- 7.5.2 Network Provisioning p. 272
- 7.6 Lightpath Virtual Topology Reconfiguration p. 273
- 7.6.1 Regular vs. Irregular Virtual Topology p. 274
- 7.6.2 Topology Design Problem Formulation p. 275
- 7.6.3 Heuristic Algorithms p. 276
- 7.6.4 Virtual Topology Migration p. 281
- 7.7 Reconfiguration for Packet Switched WDM Networks p. 284
- 7.7.1 Packet Switched WDM Reconfiguration Overview p. 284
- 7.7.2 Reconfiguration Conditions p. 286
- 7.7.3 A Case Study p. 287
- 7.7.4 Heuristic Algorithm Description p. 288
- 7.7.5 Heuristic Discussion p. 293
- 7.7.6 Lightpath Reconfiguration Migration p. 294
- 7.8 Simulation Study of IP over WDM Reconfiguration p. 295
- 7.8.1 Traffic Generation p. 296
- 7.8.2 Simulation Results p. 297
- 7.9 IP/WDM Traffic Engineering Software Design p. 303
- 7.9.1 Software Architecture for Overlay Traffic Engineering p. 303

- 7.9.2 Software Architecture for Integrated Traffic Engineering p. 306
- 7.9.3 IP Traffic Engineering to Network Control Protocol (IP TECP) p. 307
- 7.9.4 IP/WDM User to Network Interface (UNI) p. 312
- 7.9.5 WDM Traffic Engineering to Network Control Protocol (WDM TECP) p. 318
- 7.9.6 IP/WDM Traffic Engineering Tools p. 326
- 7.10 Feedback-Based Closed-Loop Traffic Engineering p. 327
- 7.10.1 Network Topology Implementation Process p. 329
- 7.10.2 Network Convergence p. 330
- 7.10.3 A Testbed Study on IP/WDM Traffic Engineering p. 330
- 7.11 Summary p. 334
- 8 Other IP/WDM Specific Issues p. 339
- 8.1 IP/WDM Group Communication p. 339
- 8.1.1 IP Multicasting p. 339
- 8.1.2 IP Multicasting in Presence of GMPLS p. 341
- 8.1.3 IP over WDM Multicasting p. 342
- 8.2 IP/WDM Network and Service Management p. 343
- 8.2.1 CORBA Reference Model and Telecom Facility p. 344
- 8.2.2 Connection and Service Management Information Modelling (CaSMIM) p. 348
- 8.2.3 Optical Network Service Management p. 349
- 8.3 TCP over Optical Networks p. 350
- 9 Concluding Remarks p. 353
- 9.1 Book Summary p. 353
- 9.2 IP/WDM Network Applications p. 354
- 9.2.1 MAN and WAN Network Transport p. 354
- 9.2.2 Layer 2 or Layer 3 VPN, VLAN, Leased Fibre Line or Wavelength Channel p. 354
- 9.2.3 Optical Interconnect p. 355
- 9.2.4 Bandwidth Brokers and Traders p. 356
- 9.3 Future Research p. 356
- 9.3.1 Scalable Common Control Plane for Optical Networks p. 357
- 9.3.2 Next Generation of TCP/IP p. 357
- 9.3.3 TCP/IP Performance Studies in Presence of a Number of Parallel Paths and Unidirectional LSPs p. 357
- 9.3.4 Optical Packet Switching p. 358
- 9.3.5 Service Protection and Restoration p. 358
- 9.3.6 Optical Network Applications p. 358
- 9.3.7 Optical MIB Development p. 358
- Bibliography p. 359
- Web Site List p. 367
- Acronym List p. 371
- Index p. 381
