

- Preface p. xiii
- Acknowledgments p. xxi
- 1 Third-Generation CDMA Systems p. 1
- 1.1 Introduction p. 1
- 1.2 Basic CDMA System p. 2
- 1.2.1 Spread Spectrum Fundamentals p. 2
- 1.2.1.1 Frequency Hopping p. 3
- 1.2.1.2 Direct Sequence p. 3
- 1.2.2 The Effect of Multipath Channels p. 6
- 1.2.3 RAKE Receiver p. 9
- 1.2.4 Multiple Access p. 13
- 1.2.4.1 Downlink Interference p. 14
- 1.2.4.2 Uplink Interference p. 15
- 1.2.4.3 Gaussian Approximation p. 18
- 1.2.5 Spreading Codes p. 20
- 1.2.5.1 m-sequences p. 20
- 1.2.5.2 Gold Sequences p. 21
- 1.2.5.3 Extended m-sequences p. 22
- 1.2.6 Channel Estimation p. 22
- 1.2.6.1 Downlink Pilot-Assisted Channel Estimation p. 23
- 1.2.6.2 Uplink Pilot-Symbol assisted Channel Estimation p. 24
- 1.2.6.3 Pilot-Symbol Assisted Decision-Directed Channel Estimation p. 25
- 1.2.7 Summary p. 27
- 1.3 Third-Generation Systems p. 27
- 1.3.1 Introduction p. 27
- 1.3.2 UMTS Terrestrial Radio Access (UTRA) p. 29
- 1.3.2.1 Characteristics of UTRA p. 29
- 1.3.2.2 Transport Channels p. 32
- 1.3.2.3 Physical Channels p. 33
- 1.3.2.3.1 Dedicated Physical Channels p. 36
- 1.3.2.3.2 Common Physical Channels p. 38
- 1.3.2.3.2.1 Common Physical Channels of the FDD Mode p. 38
- 1.3.2.3.2.2 Common Physical Channels of the TDD Mode p. 42
- 1.3.2.4 Service Multiplexing and Channel Coding in UTRA p. 44
- 1.3.2.4.1 CRC Attachment p. 45
- 1.3.2.4.2 Transport Block Concatenation p. 45
- 1.3.2.4.3 Channel-Coding p. 45
- 1.3.2.4.4 Radio Frame Padding p. 48
- 1.3.2.4.5 First Interleaving p. 48
- 1.3.2.4.6 Radio Frame Segmentation p. 48
- 1.3.2.4.7 Rate Matching p. 48
- 1.3.2.4.8 Discontinuous Transmission Indication p. 48
- 1.3.2.4.9 Transport Channel Multiplexing p. 49
- 1.3.2.4.10 Physical Channel Segmentation p. 49
- 1.3.2.4.11 Second Interleaving p. 49
- 1.3.2.4.12 Physical Channel Mapping p. 49

- 1.3.2.4.13 Mapping Several Multirate Services to the UL Dedicated Physical Channels in FDD Mode p. 49
- 1.3.2.4.14 Mapping of a 4.1 Kbps Data Service to the DL DPDCH in FDD Mode p. 51
- 1.3.2.4.15 Mapping Several Multirate Services to the UL Dedicated Physical Channels in TDD Mode p. 52
- 1.3.2.5 Variable-Rate and Multicode Transmission in UTRA p. 55
- 1.3.2.6 Spreading and Modulation p. 56
- 1.3.2.6.1 Orthogonal Variable Spreading Factor Codes p. 57
- 1.3.2.6.2 Uplink Scrambling Codes p. 59
- 1.3.2.6.3 Downlink Scrambling Codes p. 59
- 1.3.2.6.4 Uplink Spreading and Modulation p. 60
- 1.3.2.6.5 Downlink Spreading and Modulation p. 60
- 1.3.2.7 Random Access p. 61
- 1.3.2.7.1 Mobile-Initiated Physical Random Access Procedures p. 61
- 1.3.2.7.2 Common Packet Channel Access Procedures p. 63
- 1.3.2.8 Power Control p. 63
- 1.3.2.8.1 Closed-Loop Power Control in UTRA p. 63
- 1.3.2.8.2 Open-Loop Power Control in TDD Mode p. 64
- 1.3.2.9 Cell Identification p. 64
- 1.3.2.9.1 Cell Identification in the FDD Mode p. 64
- 1.3.2.9.2 Cell Identification in the TDD Mode p. 67
- 1.3.2.10 Handover p. 68
- 1.3.2.10.1 Intra-Frequency Handover or Soft Handover p. 69
- 1.3.2.10.2 Inter-Frequency Handover or Hard Handover p. 69
- 1.3.2.11 Intercell Time Synchronisation in the UTRA TDD Mode p. 70
- 1.3.3 The cdma2000 Terrestrial Radio Access p. 71
- 1.3.3.1 Characteristics of cdma2000 p. 72
- 1.3.3.2 Physical Channels in cdma2000 p. 73
- 1.3.3.3 Service Multiplexing and Channel Coding p. 75
- 1.3.3.4 Spreading and Modulation p. 76
- 1.3.3.4.1 Downlink Spreading and Modulation p. 79
- 1.3.3.4.2 Uplink Spreading and Modulation p. 80
- 1.3.3.5 Random Access p. 80
- 1.3.3.6 Handover p. 83
- 1.3.4 Performance-Enhancement Features p. 85
- 1.3.4.1 Downlink Transmit Diversity Techniques p. 85
- 1.3.4.1.1 Space Time Block Coding-Based Transmit Diversity p. 85
- 1.3.4.1.2 Time-Switched Transmit Diversity p. 85
- 1.3.4.1.3 Closed-Loop Transmit Diversity p. 85
- 1.3.4.2 Adaptive Antennas p. 85
- 1.3.4.3 Multi-User Detection/Interference Cancellation p. 85
- 1.3.5 Summary of 3G Systems p. 86
- 1.4 Summary and Conclusions p. 87
- 2 Burst-by-Burst Adaptive Wireless Transceivers p. 89
- 2.1 Motivation p. 89
- 2.2 Narrowband Burst-by-Burst Adaptive Modulation p. 90

- 2.3 Wideband Burst-by-Burst Adaptive Modulation p. 93
- 2.3.1 Channel quality metrics p. 93
- 2.4 Wideband BbB-AQAM Video Transceivers p. 96
- 2.5 BbB-AQAM Performance p. 99
- 2.6 Wideband BbB-AQAM Video Performance p. 103
- 2.6.1 AQAM Switching Thresholds p. 104
- 2.6.2 Turbo-coded AQAM videophone performance p. 105
- 2.7 BbB Adaptive Joint-detection CDMA Video Transceiver p. 107
- 2.7.1 Multi-user Detection for CDMA p. 107
- 2.7.2 JD-ACDMA Modem Mode Adaptation and Signalling p. 109
- 2.7.3 The JD-ACDMA Video Transceiver p. 110
- 2.7.4 JD-ACDMA Video Transceiver Performance p. 113
- 2.8 Subband-Adaptive OFDM Video Transceivers p. 116
- 2.9 Summary and Conclusions p. 118
- 3 Intelligent Antenna Arrays and Beamforming p. 123
- 3.1 Introduction p. 123
- 3.2 Beamforming p. 124
- 3.2.1 Antenna Array Parameters p. 124
- 3.2.2 Potential Benefits of Antenna Arrays in Mobile Communications p. 125
- 3.2.2.1 Multiple Beams p. 125
- 3.2.2.2 Adaptive Beams p. 126
- 3.2.2.3 Null Steering p. 126
- 3.2.2.4 Diversity Schemes p. 127
- 3.2.2.5 Reduction in Delay Spread and Multipath Fading p. 131
- 3.2.2.6 Reduction in Co-channel Interference p. 132
- 3.2.2.7 Capacity Improvement and Spectral Efficiency p. 134
- 3.2.2.8 Increase in Transmission Efficiency p. 134
- 3.2.2.9 Reduction in Handovers p. 134
- 3.2.3 Signal Model p. 134
- 3.2.4 A Beamforming Example p. 138
- 3.2.5 Analogue Beamforming p. 139
- 3.2.6 Digital Beamforming p. 139
- 3.2.7 Element-Space Beamforming p. 140
- 3.2.8 Beam-Space Beamforming p. 141
- 3.3 Adaptive Beamforming p. 143
- 3.3.1 Fixed Beams p. 145
- 3.3.2 Temporal Reference Techniques p. 146
- 3.3.2.1 Least Mean Squares p. 148
- 3.3.2.2 Normalised Least Mean Squares Algorithm p. 151
- 3.3.2.3 Sample Matrix Inversion p. 151
- 3.3.2.4 Recursive Least Squares p. 159
- 3.3.3 Spatial Reference Techniques p. 160
- 3.3.3.1 Antenna Calibration p. 160
- 3.3.4 Blind Adaptation p. 163
- 3.3.4.1 Constant Modulus Algorithm p. 163
- 3.3.5 Adaptive Arrays in the Downlink p. 165

- 3.3.6 Adaptive Beamforming Performance Results p. 166
- 3.3.6.1 Two Element Adaptive Antenna Using Sample Matrix Inversion p. 167
- 3.3.6.2 Two Element Adaptive Antenna Using Unconstrained Least Mean Squares p. 167
- 3.3.6.3 Two Element Adaptive Antenna Using Normalised Least Mean Squares p. 170
- 3.3.6.4 Performance of a Three Element Adaptive Antenna Array p. 174
- 3.3.6.5 Complexity analysis p. 182
- 3.4 Summary and Conclusions p. 192
- 4 Adaptive Arrays in Cellular Networks p. 193
- 4.1 Introduction p. 193
- 4.2 Modelling Adaptive Antenna Arrays p. 194
- 4.2.1 Algebraic Manipulation with Optimal Beamforming p. 194
- 4.2.2 Using Probability Density Functions p. 196
- 4.2.3 Sample Matrix Inversion Beamforming p. 197
- 4.3 Channel Allocation Techniques p. 199
- 4.3.1 Overview of Channel Allocation p. 200
- 4.3.1.1 Fixed Channel Allocation p. 201
- 4.3.1.1.1 Channel Borrowing p. 203
- 4.3.1.1.2 Flexible Channel Allocation p. 204
- 4.3.1.2 Dynamic Channel Allocation p. 205
- 4.3.1.2.1 Centrally Controlled DCA Algorithms p. 206
- 4.3.1.2.2 Distributed DCA Algorithms p. 207
- 4.3.1.2.3 Locally distributed DCA algorithms p. 208
- 4.3.1.3 Hybrid Channel Allocation p. 209
- 4.3.1.4 The Effect of Handovers p. 210
- 4.3.1.5 The Effect of Transmission Power Control p. 210
- 4.3.2 Simulation of the Channel Allocation Algorithms p. 211
- 4.3.2.1 The Mobile Radio Network Simulator, "Netsim" p. 211
- 4.3.2.1.1 Physical Layer Model p. 213
- 4.3.2.1.2 Shadow Fading Model p. 214
- 4.3.3 Overview of Channel Allocation Algorithms p. 215
- 4.3.3.1 Fixed Channel Allocation Algorithm p. 215
- 4.3.3.2 Distributed Dynamic Channel Allocation Algorithms p. 216
- 4.3.3.3 Locally Distributed Dynamic Channel Allocation Algorithms p. 217
- 4.3.3.4 Performance Metrics p. 217
- 4.3.3.5 Nonuniform Traffic Model p. 220
- 4.3.4 DCA Performance without Adaptive Arrays p. 221
- 4.4 Employing Adaptive Antenna Arrays p. 221
- 4.5 Multipath Propagation Environments p. 225
- 4.6 Network Performance Results p. 232
- 4.6.1 System Simulation Parameters p. 232
- 4.6.2 Non-Wraparound Network Performance Results p. 240
- 4.6.2.1 Performance Results over a LOS Channel p. 240
- 4.6.2.2 Performance Results over a Multipath Channel p. 246
- 4.6.2.3 Performance over a Multipath Channel using Power Control p. 251

- 4.6.2.4 Transmission over a Multipath Channel Using Power Control and Adaptive Modulation p. 260
- 4.6.2.5 Power Control and Adaptive Modulation Algorithm p. 261
- 4.6.2.6 Performance of PC-assisted, AQAM-aided Dynamic Channel Allocation p. 265
- 4.6.2.7 Summary of Non-Wraparound Network Performance p. 270
- 4.6.3 Wrap-around Network Performance Results p. 272
- 4.6.3.1 Performance Results over a LOS Channel p. 272
- 4.6.3.2 Performance Results over a Multipath Channel p. 276
- 4.6.3.3 Performance over a Multipath Channel using Power Control p. 280
- 4.6.3.4 Performance of an AQAM based Network using Power Control p. 287
- 4.7 Summary and Conclusions p. 294
- 5 UTRA, Adaptive Arrays and Adaptive Modulation p. 295
- 5.1 Introduction p. 295
- 5.2 Direct Sequence Code Division Multiple Access p. 296
- 5.3 UMTS Terrestrial Radio Access p. 298
- 5.3.1 Spreading and Modulation p. 299
- 5.3.2 Common Pilot Channel p. 303
- 5.3.3 Power Control p. 304
- 5.3.3.1 Uplink Power Control p. 305
- 5.3.3.2 Downlink Power Control p. 306
- 5.3.4 Soft Handover p. 306
- 5.3.5 Signal-to-Interference plus Noise Ratio Calculations p. 307
- 5.3.5.1 Downlink p. 307
- 5.3.5.2 Uplink p. 308
- 5.3.6 Multi-User Detection p. 309
- 5.4 Simulation Results p. 310
- 5.4.1 Simulation Parameters p. 310
- 5.4.2 The Effect of Pilot Power on Soft Handover Results p. 314
- 5.4.2.1 Fixed Received Pilot Power Thresholds without Shadowing p. 314
- 5.4.2.2 Fixed Received Pilot Power Thresholds with 0.5 Hz Shadowing p. 319
- 5.4.2.3 Fixed Received Pilot Power Thresholds with 1.0 Hz Shadowing p. 320
- 5.4.2.4 Summary p. 321
- 5.4.2.5 Relative Received Pilot Power Thresholds without Shadowing p. 322
- 5.4.2.6 Relative Received Pilot Power Thresholds with 0.5 Hz Shadowing p. 323
- 5.4.2.7 Relative Received Pilot Power Thresholds with 1.0 Hz Shadowing p. 327
- 5.4.2.8 Summary p. 329
- 5.4.3  $E_c/I_o$  Power Based Soft Handover Results p. 329
- 5.4.3.1 Fixed  $E_c/I_o$  Thresholds without Shadowing p. 329
- 5.4.3.2 Fixed  $E_c/I_o$  Thresholds with 0.5 Hz Shadowing p. 332
- 5.4.3.3 Fixed  $E_c/I_o$  Thresholds with 1.0 Hz Shadowing p. 335
- 5.4.3.4 Summary p. 336
- 5.4.3.5 Relative  $E_c/I_o$  Thresholds without Shadowing p. 336
- 5.4.3.6 Relative  $E_c/I_o$  Thresholds with 0.5 Hz Shadowing p. 337
- 5.4.3.7 Relative  $E_c/I_o$  Thresholds with 1.0 Hz Shadowing p. 341
- 5.4.3.8 Summary p. 341
- 5.4.4 Overview of Results p. 342

- 5.4.5 Performance of Adaptive Antenna Arrays in a High Data Rate Pedestrian Environment p. 343
- 5.4.6 Performance of Adaptive Antenna Arrays and Adaptive Modulation in a High Data Rate Pedestrian Environment p. 351
- 5.5 Summary and Conclusions p. 359
- 6 Conclusions and Further Research p. 361
- 6.1 Summary and Conclusions p. 361
- 6.2 Further Research p. 366
- Glossary p. 367
- Bibliography p. 369
- Author Index p. 395
- Subject Index p. 407
