

- Preface.
- 1 Introduction.
- 1.1 Importance of Heat Transfer
- 1.2 Heat Transfer Modes
- 1.3 The Laws of Heat Transfer
- 1.4 Formulation of Heat Transfer Problems
- 1.4.1 Heat transfer from a plate exposed to solar heat flux
- 1.4.2 Incandescent lamp
- 1.4.3 Systems with a relative motion and internal heat generation
- 1.5 Heat Conduction Equation
- 1.6 Boundary and Initial Conditions
- 1.7 Solution Methodology
- 1.8 Summary
- 1.9 Exercise
- Bibliography
- 2 Some Basic Discrete Systems.
- 2.1 Introduction
- 2.2 Steady State Problems
- 2.2.1 Heat flow in a composite slab
- 2.2.2 Fluid flow network
- 2.2.3 Heat transfer in heat sinks combined conduction-convection
- 2.2.4 Analysis of a heat exchanger
- 2.3 Transient Heat Transfer Problem Propagation Problem
- 2.4 Summary
- 2.5 Exercise
- Bibliography
- 3 The Finite Element Method.
- 3.1 Introduction
- 3.2 Elements and Shape Functions
- 3.2.1 One-dimensional linear element
- 3.2.2 One-dimensional quadratic element
- 3.2.3 Two-dimensional linear triangular elements
- 3.2.4 Area coordinates
- 3.2.5 Quadratic triangular elements
- 3.2.6 Two-dimensional quadrilateral elements
- 3.4 Formulation for the Heat Conduction Equation
- 3.2.7 Isoparametric elements
- 3.2.8 Three-dimensional elements
- 3.3 Formulation Element Characteristics
- 3.3.1 Ritz method Heat balance integral method-Goodman's method
- 3.3.2 Rayleigh-Ritz method Variational method
- 3.3.3 The method of weighted residuals
- 3.3.4 Galerkin finite element method
- 3.4.1 Variational approach
- 3.4.2 The Galerkin method
- 3.5 Requirements for Interpolation Functions

- 3.6 Summary
- 3.7 Exercise
- Bibliography
- 4 Steady State Heat Conduction in One Dimension.
- 4.1 Introduction
- 4.2 Plane Walls
- 4.2.1 Homogeneous wall
- 4.2.2 Composite wall
- 4.2.3 Finite element discretization
- 4.2.4 Wall with varying cross-sectional area
- 4.2.5 Plane wall with a heat source: solution by linear elements
- 4.2.6 Plane wall with a heat source: solution by quadratic elements
- 4.2.7 Plane wall with a heat source: solution by modified quadratic equations static condensation
- 4.3 Radial Heat Flow in a Cylinder
- 4.3.1 Cylinder with heat source
- 4.4 Conduction-Convection Systems
- 4.5 Summary
- 4.6 Exercise
- Bibliography
- 5 Steady State Heat Conduction in Multi-dimensions.
- 5.1 Introduction
- 5.2 Two-dimensional Plane Problems
- 5.2.1 Triangular elements
- 5.3 Rectangular Elements
- 5.4 Plate with Variable Thickness
- 5.5 Three-dimensional Problems
- 5.6 Axisymmetric Problems
- 5.6.1 Galerkin's method for linear triangular axisymmetric elements
- 5.7 Summary
- 5.8 Exercise
- Bibliography
- 6 Transient Heat Conduction Analysis.
- 6.1 Introduction
- 6.2 Lumped Heat Capacity System
- 6.3 Numerical Solution
- 6.3.1 Transient governing equations and boundary and initial conditions
- 6.3.2 The Galerkin method
- 6.4 One-dimensional Transient State Problem
- 6.4.1 Time discretization using the Finite Difference Method (FDM)
- 6.4.2 Time discretization using the Finite Element Method (FEM)
- 6.5 Stability
- 6.7.2 Enthalpy formulation
- 6.6 Multi-dimensional Transient Heat Conduction
- 6.7 Phase Change Problems-Solidification and Melting
- 6.7.1 The governing equations

- 6.8 Inverse Heat Conduction Problems
- 6.8.1 One-dimensional heat conduction
- 6.9 Summary
- 6.10 Exercise
- Bibliography
- 7 Convection Heat Transfer 173
- 7.1 Introduction
- 7.1.1 Types of fluid-motion-assisted heat transport
- 7.2 Navier-Stokes Equations
- 7.2.1 Conservation of mass or continuity equation
- 7.2.2 Conservation of momentum
- 7.2.3 Energy equation
- 7.3 Non-dimensional Form of the Governing Equations
- 7.3.1 Forced convection
- 7.3.2 Natural convection (Buoyancy-driven convection)
- 7.3.3 Mixed convection
- 7.4 The Transient Convection-diffusion Problem
- 7.4.1 Finite element solution to convection-diffusion equation
- 7.4.2 Extension to multi-dimensions
- 7.5 Stability Conditions
- 7.6 Characteristic-based Split (CBS) Scheme
- 7.6.1 Spatial discretization
- 7.7 Artificial Compressibility Scheme
- 7.6.2 Time-step calculation
- 7.6.3 Boundary and initial conditions
- 7.6.4 Steady and transient solution methods
- 7.8 Nusselt Number, Drag and Stream Function
- 7.8.1 Nusselt number
- 7.8.2 Drag calculation
- 7.8.3 Stream function
- 7.9 Mesh Convergence
- 7.10 Laminar Isothermal Flow
- 7.10.1 Geometry, boundary and initial conditions
- 7.10.2 Solution
- 7.11 Laminar Non-isothermal Flow
- 7.11.1 Forced convection heat transfer
- 7.11.2 Buoyancy-driven convection heat transfer
- 7.11.3 Mixed convection heat transfer
- 7.12 Introduction to Turbulent Flow
- 7.12.1 Solution procedure and result
- 7.13 Extension to Axisymmetric Problems
- 7.14 Summary
- 7.15 Exercise
- Bibliography
- 8 Convection in Porous Media.
- 8.1 Introduction

- 8.2 Generalized Porous Medium Flow Approach
- 8.2.1 Non-dimensional scales
- 8.2.2 Limiting cases
- 8.3 Discretization Procedure
- 8.3.1 Temporal discretization
- 8.3.2 Spatial discretization
- 8.3.3 Semi- and quasi-implicit forms
- 8.4 Non-isothermal Flows
- 8.5 Forced Convection
- 8.6 Natural Convection
- 8.6.1 Constant porosity medium
- 8.7 Summary
- 8.8 Exercise
- Bibliography
- 9 Some Examples of Fluid Flow and Heat Transfer Problems.
- 9.1 Introduction
- 9.2 Isothermal Flow Problems
- 9.2.1 Steady state problems
- 9.2.2 Transient flow
- 9.3 Non-isothermal Benchmark Flow Problem
- 9.3.1 Backward-facing step
- 9.4 Thermal Conduction in an Electronic Package
- 9.5 Forced Convection Heat Transfer From Heat Sources
- 9.6 Summary
- 9.7 Exercise
- Bibliography
- 10 Implementation of Computer Code.
- 10.1 Introduction
- 10.2 Preprocessing
- 10.2.1 Mesh generation
- 10.2.2 Linear triangular element data
- 10.2.3 Element size calculation
- 10.2.4 Shape functions and their derivatives
- 10.2.5 Boundary normal calculation
- 10.3.1 Time-step calculation
- 10.2.6 Mass matrix and mass lumping
- 10.2.7 Implicit pressure or heat conduction matrix
- 10.3 Main Unit
- 10.3.2 Element loop and assembly
- 10.3.3 Updating solution
- 10.3.4 Boundary conditions
- 10.3.5 Monitoring steady state
- 10.4 Postprocessing
- 10.4.1 Interpolation of data
- 10.5 Summary
- Bibliography

- A Green's Lemma.
- B Integration Formulae.
- B.1 Linear Triangles
- B.2 Linear Tetrahedron
- C Finite Element Assembly Procedure.
- D Simplified Form of the Navier-Stokes Equations.
- Index.
