

Table of contents

- Preface
- 1 Basics of Digital Communications
 - 1.1 Orthogonal Signals and Vectors
 - 1.2 Baseband and Passband Transmission
 - 1.3 The AWGN Channel
 - 1.4 Detection of Signals in Noise
 - 1.5 Linear Modulation Schemes
 - 1.6 Bibliographical Notes
 - 1.7 Problems
- 2 Mobile Radio Channels
 - 2.1 Multipath Propagation
 - 2.2 Characterization of Fading Channels
 - 2.3 Channel Simulation
 - 2.4 Digital Transmission over Fading Channels
 - 2.5 Bibliographical Notes
 - 2.6 Problems
- 3 Channel Coding
 - 3.1 General Principles
 - 3.2 Convolutional Codes
 - 3.3 Reed-Solomon Codes
 - 3.4 Bibliographical Notes
 - 3.5 Problems
- 4 OFDM
 - 4.1 General Principles
 - 4.2 Implementation and Signal Processing Aspects for OFDM
 - 4.3 Synchronization and Channel Estimation Aspects for OFDM Systems
 - 4.4 Interleaving and Channel Diversity for OFDM Systems
 - 4.5 Modulation and Channel Coding for OFDM Systems
 - 4.6 OFDM System Examples
 - 4.7 Bibliographical Notes
 - 4.8 Problems
- 5 CDMA
 - 5.1 General Principles of CDMA
 - 5.2 CDMA Transmission Channel Models
 - 5.3 Receiver Structures for Synchronous Transmission
 - 5.4 Receiver Structures for MC-CDMA and Asynchronous Wideband CDMA Transmission
 - 5.5 Examples for CDMA Systems
 - 5.6 Bibliographical Notes
 - 5.7 Problems
- Bibliography
- Index
