

- Preface
- Abbreviations
- 1.5 Conclusions
- 2 System Analysis Fundamentals
- 2.3 Concluding Remarks
- 3.3 QoS Attributes in UMTS Bearer Services
- 1 Evolving Mobile Networks
- 1.1 The Growth of Mobile Communications
- 1.2 Roadmap to Broadband Wireless Multimedia
- 1.3 UMTS Performance Enhancing Technologies
- 1.4 UMTS Network Requirements
- References
- References
- 2.1 Fundamentals of System Analysis
- 3 UMTS Service Components
- 3.1 The Service Creation Environment
- 2.2 The 3G Communications Environment
- 3.2 The UMTS Bearer Architecture
- 3.4 UMTS Quality of Service Classes and Attributes
- 3.5 Mapping QoS Attributes
- 3.6 End-to-End QoS
- 3.7 QoS within Inter-Working Scenarios
- 3.8 Applications and Service Offerings
- 3.9 Conclusions
- References
- 4 The UTRA Physical Layer Design
- 4.1 Summary of Features
- 4.2 Dedicated and Common Transport Channels
- 4.3 Configuration of FDD Physical Channels
- 4.4 Configuration of TDD Physical Channels
- 4.5 Spreading and Modulation in TDD
- References
- Appendix A DPDCH and DPCCCH Fields
- Appendix B Bit Patterns Compressed Mode and $\text{pilot} = 4$
- 5 The UMTS Development Platform
- 5.2 The Core Network Domain
- 5.3 The UMTS Network Configuration Beyond R99
- 5.4 The Access Network Domain
- 5.5 UTRAN Identifiers and Functions
- 5.6 Mobility Management
- 5.7 UTRAN Synchronisation and O&M Requirements
- 5.8 UTRAN Interfaces
- 5.9 Inter-working of UTRAN Interfaces
- 5.10 Radio Interface Protocol Architecture
- References
- 6 IP-Multimedia Subsystem (IMS)

- 6.1 Background
- 6.2 Framework for the IP-Multimedia Subsystem
- 6.3 IP-Multimedia Subsystem (IMS) Configuration
- 6.4 Mobility Management
- 6.5 Multimedia Signalling
- 6.6 IMS Procedures and Session Flows
- 6.7 IMS Transport Issues
- 6.8 Deploying IMS Solutions
- 6.9 Conclusions
- References
- 4.6 Multiplexing and Channel Coding
- 5.1 Architecture and Deployment Scenarios
- Appendix A UMTS Functional Domains
- 7 Deploying 3G Networks
- 7.1 Background
- 7.2 Network Dimensioning Principles
- 7.3 Parameters for Multi-service Traffic
- 7.4 Establishing Service Models
- 7.5 Projecting Capacity Needs
- 7.6 Cellular Coverage Planning Issues
- 7.7 Dimensioning RNC Interfaces
- 7.8 Radio Network Dimensioning Field Study
- 7.9 Core Network (CN) Design
- 7.10 Transmission Network Assessment
- 7.11 Co-locating and Sharing Sites
- 7.12 Co-locating Antenna Systems
- 8.2 HSDPA and Radio-Access Network Architecture
- 8.5 Associated Signalling for HSDPA
- 8.8 Conclusions
- References
- 9.1 UMTS Spectrum Allocation
- 9.2 Radio Transmission and Reception Aspects
- 9.3 Transmitter Characteristics
- 9.4 Receiver Characteristics
- 7.13 Conclusions
- 8.3 Structure of the HSDPA Physical Layer
- References
- 9 The UTRA Transmission System
- 8 High Speed Downlink Packet Access
- 8.1 Background
- 8.4 Coding in the HS-DSCH Channel
- 8.6 HSDPA Technology Evaluation and EU Features
- 8.7 Terminal Receiver Aspects
- 9.5 UTRA RF Performance Examples
- 9.6 Conclusions
- References

- 10 3G Services Enablers
- 10.1 Introduction
- 10.2 Content Distribution Platforms
- 10.3 Facilitating Real Time IP Services
- 10.4 Enabling Location Communication Services (LCS)
- 10.5 VHE/OSA
- 10.6 Conclusions
- References
- 11 Resource and Network Management
- 11.1 Introduction
- 11.2 Radio Resource Management and Signalling
- 11.3 Network Management
- 11.4 UMTS Network Optimisation
- References
- 12 Complementary UMTS Technologies
- 12.1 WLANs and 3G Networks
- 12.2 WLAN Deployment Scenarios
- 12.3 Train WLANs and Other Deployment Scenarios
- 12.4 Description of MO-WLAN Building Blocks
- 12.5 Security and Authentication
- 12.6 Enhanced Data Rate for GSM Evolution (EDGE)
- 12.7 All IP Radio-Access Network Characteristics
- 12.8 WiMAX - Enhancing Broadband Hotspots
- 12.9 Conclusions
- References
- Index
