

- I Fundamentals
- 1 Overview p. 1
- 1.A What Is Environmental Engineering Science? p. 1
- 1.B Domains of Environmental Engineering p. 5
- 1.B.1 Water quality engineering p. 5
- 1.B.2 Air quality engineering p. 8
- 1.B.3 Hazardous waste management p. 10
- 1.C Context and Concepts p. 12
- 1.C.1 Concentrations and other units of measure p. 12
- 1.C.2 Material balance p. 15
- 1.C.3 Factors governing contaminant concentrations p. 17
- 1.C.4 Engineering analysis p. 18
- 1.C.5 Control opportunities p. 19
- 1.C.6 Environmental regulations p. 20
- 1.C.7 Precision and accuracy p. 21
- 1.C.8 Magnitudes: Length scales and characteristic times p. 22
- References p. 25
- Problems p. 26
- 2 Water, Air, and Their Impurities p. 30
- 2.A Water and the Hydrosphere p. 30
- 2.B Air and the Atmosphere p. 36
- 2.C Impurities in Environmental Media p. 41
- 2.C.1 Gases dissolved in water p. 42
- 2.C.2 Water in air p. 42
- 2.C.3 Acids, bases, and the hydrogen ion p. 43
- 2.C.4 Inorganic impurities p. 43
- 2.C.5 Organic impurities p. 51
- 2.C.6 Radionuclides p. 56
- 2.C.7 Compounds causing odor, taste, or color p. 58
- 2.C.8 Particulate matter p. 58
- 2.C.9 Microorganisms p. 65
- References p. 69
- Problems p. 70
- 3 Transformation Processes p. 76
- 3.A Governing Concepts p. 77
- 3.A.1 Stoichiometry p. 77
- 3.A.2 Chemical equilibrium p. 79
- 3.A.3 Kinetics p. 82
- 3.B Phase Changes and Partitioning p. 92
- 3.B.1 Vapor pressure p. 92
- 3.B.2 Dissolution of species in water p. 95
- 3.B.3 Sorption p. 100
- 3.C Acid-Base Reactions p. 106
- 3.C.1 Acid-base reactions and the hydrogen ion p. 107
- 3.C.2 pH of pure water p. 107
- 3.C.3 Strong and weak acids p. 108

- 3.C.4 Carbonate system p. 112
- 3.D Oxidation-Reduction Reactions p. 119
- 3.D.1 Oxidation state p. 120
- 3.D.2 Corrosion p. 121
- 3.D.3 Combustion p. 125
- 3.D.4 Atmospheric oxidation processes p. 129
- 3.D.5 Microbial reactions p. 131
- Reference p. 141
- Problems p. 142
- 4 Transport Phenomena p. 159
- 4.A Basic Concepts and Mechanisms p. 160
- 4.A.1 Contaminant flux p. 160
- 4.A.2 Advection p. 161
- 4.A.3 Molecular diffusion p. 162
- 4.A.4 Dispersion p. 166
- 4.B Particle Motion p. 172
- 4.B.1 Drag on particles p. 172
- 4.B.2 Gravitational settling p. 175
- 4.B.3 Brownian diffusion p. 180
- 4.C Mass Transfer at Fluid Boundaries p. 182
- 4.C.1 Mass-transfer coefficient p. 183
- 4.C.2 Transport across the air-water interface p. 188
- 4.D Transport in Porous Media p. 192
- 4.D.1 Fluid flow through porous media p. 193
- 4.D.2 Contaminant transport in porous media p. 197
- References p. 200
- Problems p. 200
- 5 Transport and Transformation Models p. 207
- 5.A Reactor Models p. 209
- 5.A.1 Batch reactor p. 215
- 5.A.2 Completely mixed flow reactor (CMFR) p. 220
- 5.A.3 Plug-flow reactor (PFR) p. 226
- 5.A.4 Advanced examples p. 236
- 5.B Beyond Ideal Reactors: General Material-Balance Models p. 247
- 5.B.1 Governing equation p. 247
- 5.B.2 Approaches for solving environmental transport problems p. 251
- References p. 265
- Problems p. 265
- II Applications
- 6 Water Quality Engineering p. 280
- 6.A The Nature of Water Quality Problems p. 280
- 6.A.1 Rivers and streams p. 283
- 6.A.2 Lakes and reservoirs p. 288
- 6.A.3 Groundwater p. 292
- 6.A.4 Oceans and estuaries p. 295
- 6.B Overview of Water Quality Regulations and Treatment Systems p. 299

- 6.B.1 Key U.S. federal water regulations p. 300
- 6.B.2 Engineered water quality systems p. 301
- 6.C Physical Treatment Methods p. 305
- 6.C.1 Sedimentation p. 305
- 6.C.2 Filtration through granular media p. 310
- 6.C.3 Membrane separation processes p. 316
- 6.D Chemical and Physicochemical Treatment Methods p. 321
- 6.D.1 Disinfection p. 321
- 6.D.2 Coagulation and flocculation p. 329
- 6.D.3 Sorption of organic molecules p. 333
- 6.D.4 Chemical precipitation and ion exchange p. 338
- 6.E Biological Wastewater Treatment p. 346
- 6.E.1 Activated sludge p. 347
- 6.E.2 Trickling filters p. 355
- 6.E.3 Anaerobic digestion of wastewater sludges p. 358
- References p. 362
- Problems p. 364
- 7 Air Quality Engineering p. 388
- 7.A Nature of Air Pollution Problems p. 388
- 7.A.1 Criteria pollutants p. 390
- 7.A.2 Hazardous air pollutants p. 395
- 7.A.3 Acid deposition p. 397
- 7.A.4 Photochemical smog p. 400
- 7.A.5 Indoor air quality p. 404
- 7.A.6 Global change p. 411
- 7.B Air Pollutant Emissions and Controls p. 418
- 7.B.1 Characterizing emissions p. 419
- 7.B.2 Pollutant generation by combustion p. 425
- 7.B.3 Motor vehicle emissions p. 436
- 7.C Treatment Technologies p. 442
- 7.C.1 Particle control devices p. 443
- 7.C.2 Absorption for gaseous pollutant control p. 453
- 7.D Air Quality Models p. 454
- 7.D.1 Summary of modeling approaches p. 455
- 7.D.2 Gaussian plume dispersion modeling p. 457
- References p. 469
- Problems p. 471
- 8 Hazardous Waste Management p. 484
- 8.A Overview p. 484
- 8.A.1 History and case studies p. 485
- 8.A.2 Hazardous waste regulatory framework p. 489
- 8.A.3 Magnitude of the hazardous waste problem p. 495
- 8.A.4 Sources of hazardous wastes p. 498
- 8.B Hazardous Waste Minimization p. 499
- 8.B.1 What is waste minimization? p. 500
- 8.B.2 Why should we do it? p. 500

- 8.B.3 Techniques for waste minimization p. 501
- 8.B.4 Management tools p. 506
- 8.C Hazardous Waste Treatment Processes p. 510
- 8.C.1 Physical separation p. 511
- 8.C.2 Chemical treatment p. 526
- 8.C.3 Thermal treatment p. 539
- 8.C.4 Biological treatment p. 549
- 8.D Hazardous Waste Disposal p. 558
- 8.D.1 Landfills p. 558
- 8.D.2 Deep-well injection p. 561
- 8.E Environmental Releases and Remediation p. 564
- 8.E.1 Site characterization p. 565
- 8.E.2 Quantitative risk analysis p. 568
- 8.E.3 Site remediation p. 574
- References p. 586
- Problems p. 590
- Appendices
- A Basic Data for Environmental Engineering Science p. 601
- B Primer on Ionizing Radiation p. 607
- C Primer on Environmental Organic Chemicals p. 613
- C.1 Pure hydrocarbons p. 614
- C.2 Oxygenated organic compounds p. 616
- C.3 Organohalides p. 617
- C.4 Organic compounds containing sulfur or nitrogen p. 618
- D Problem Solving: Mathematics for Environmental Engineering p. 620
- D.1 Ordinary differential equations p. 620
- D.1.a First-order linear equation with constant coefficients p. 620
- D.1.b Coupled first-order ordinary differential equations p. 623
- D.1.c Introduction to the numerical solution of ordinary differential equations p. 625
- D.2 Partial differential equations that arise in transport problems p. 627
- D.3 Solving equilibrium problems: Roots of nonlinear algebraic equations p. 630
- D.4 Data manipulation on a logarithmic scale p. 635
- D.5 Linear regression p. 637
- E A Further Look at Transformation Processes p. 641
- E.1 Activity p. 641
- E.2 Gibbs free energy and equilibrium constants p. 642
- E.3 Electrode potentials and free-energy change in redox reactions p. 646
- E.4 Activation energy and the temperature dependence of reaction rates p. 648
- F United States Federal Regulations for Water and Air Quality p. 651
- Index p. 660
