

- Preface
- Part I Integrated Solid Waste Management
- 1 Introduction
- 1.1 Basic Concepts of an Integrated Solid Waste Management Program
- 1.2 Scope and Organization of Book
- 2 Integrated Solid Waste Management
- 2.1 Planning
- 2.2 Benefits of ISWM
- 2.3 Regulatory Issues
- 2.4 Public Promotion of ISWM
- 2.5 Collection and Transportation of Waste
- 2.6 Transfer Stations
- 2.7 Waste Composition Study
- 3 Source Reduction
- 3.1 Role of Governmental Bodies
- 3.2 Planning
- 3.3 Source Reduction Ideas
- 3.4 Reducing Toxicity
- 4 Medical Waste Management
- 4.1 Definition of Infectious Waste
- 4.2 Source Separation and Management
- 4.3 Storage
- 4.4 Transportation
- 4.5 Treatment
- 4.6 Tracking
- 4.7 Collection of Infectious Waste Generated from Homes
- 4.8 Waste Reduction
- 5 Incineration
- 5.1 Incinerable Waste
- 5.2 Waste Load Estimate
- 5.3 Types of Incinerator
- 5.4 Environmental Issues
- 5.5 Incineration of Various Nonhazardous Waste Types
- 5.6 Site Selection, Installation, and Financing
- 6 Composting
- 6.1 Fundamentals of Composting
- 6.2 Influence of Various Parameters on Composting
- 6.3 Facility Design
- 6.4 Environmental Issues
- 6.5 Health and Safety
- 6.6 Marketing
- 6.7 Economics
- 7 Reuse and Recycling
- 7.1 Planning

- 7.2 Marketing
- 7.3 Information on Recyclable Materials Recovered from Municipal Solid Waste
- 7.4 Material Recovery Facilities
- 7.5 Refuse-Derived Fuel Processing Plants
- 7.6 Quality Control and Data Collection
- 7.7 Land Spreading
- 8 Reuse of Industrial By-Products
- 8.1 Comments on Engineering Characteristics and Testing Protocols
- 8.2 Reuse of Industrial By-Products in Civil Engineering Projects
- 8.3 Environmental Issues
- 9 Contaminated Soil Remediation
- 9.1 Soil Contamination Process
- 9.2 Factors Affecting Remedial Processes
- 9.3 Contaminant Transport
- 9.4 Maintenance of Wells
- 9.5 Site Investigation
- 9.6 In Situ Remediation Methods
- 9.7 Ex Situ Remediation Methods
- 9.8 Project Life Estimation
- 9.9 Project Cost Estimation
- 9.10 Comments on Remediation Method Selection
- 10 Redevelopment of Contaminated Land
- 10.1 Risk Assessment
- 10.2 Risk-Based Corrective Action for Redevelopment of Contaminated Land
- 10.3 Legal Issues
- 10.4 Funding
- Part II Landfill DESIGN
- 11 Introduction
- 11.1 Comments on Regulatory Requirements
- 11.2 Scope and Organization of Part II
- 12 Site Selection
- 12.1 Data Collection
- 12.2 Locational Criteria
- 12.3 Preliminary Assessment of Public Reactions
- 12.4 Development of a List of Potential Sites
- 12.5 Final Site Selection
- 12.6 Preparation of Feasibility Report
- 13 Leachate and Gas Generation
- 13.1 Factors That Influence Leachate Quality
- 13.2 Factors That Influence Leachate Quantity
- 13.3 Assessing Probable Quality of Leachate
- 13.4 Estimation of Leachate Quantity
- 13.5 Typical Leachate Quality of Various Nonhazardous Wastes
- 13.6 Leachate Treatment

- 13.7 Gas Generation
- 14 Waste Characterization
- 14.1 General Guidelines for Waste Characterization
- 14.2 Identification of Hazardous Waste
- 14.3 Restriction on Land Disposal of Hazardous Waste
- 14.4 Identification of Nonhazardous Waste
- 15 Natural Attenuation Landfills
- 15.1 Natural Attenuation
