

- Preface p. xiii
- 1 Introduction p. 1
- 1.1 Optimization Fundamentals p. 3
- 1.1.1 Elements of Problem Formulation p. 4
- 1.1.2 Mathematical Modeling p. 11
- 1.1.3 Nature of Solution p. 18
- 1.1.4 Characteristics of the Search Procedure p. 23
- 1.2 Introduction to Matlab p. 27
- 1.2.1 Why Matlab? p. 28
- 1.2.2 Matlab Installation Issues p. 29
- 1.2.3 Using Matlab the First Time p. 31
- 1.2.4 An Interactive Session p. 33
- 1.2.5 Using the Editor p. 36
- 1.2.6 Creating a Code Snippet p. 41
- 1.2.7 Creating a Program p. 46
- 1.2.8 Application Bibliography p. 49
- Problems p. 51
- 2 Graphical Optimization p. 67
- 2.1 Problem Definition p. 68
- 2.1.1 Example 2.1 p. 68
- 2.1.2 Format for the Graphical Display p. 70
- 2.2 Graphical Solution p. 70
- 2.2.1 Matlab High-Level Graphics Functions p. 71
- 2.2.2 Matlab Plot Editor p. 73
- 2.2.3 Example 2.1-Graphical Solution p. 74
- 2.3 Additional Examples p. 80
- 2.3.1 Example 2.2-Different Ways of Displaying Information p. 80
- 2.3.2 Example 2.3-Flagpole Design p. 86
- 2.3.3 Example 2.4-Fin Design for Heat Transfer Application p. 97
- 2.3.4 Example 2.5-Shipping Container with Three Design Variables p. 106
- 2.4 Additional Matlab Graphics p. 118
- 2.4.1 Handle Graphics p. 118
- 2.4.2 Interactive Contour Plots p. 120
- References p. 126
- Problems p. 126
- 3 Linear Programming p. 130
- 3.1 Problem Definition p. 131
- 3.1.1 Standard Format p. 132
- 3.1.2 Modeling Issues p. 136
- 3.2 Graphical Solution p. 145
- 3.2.1 Example 3.1 p. 147
- 3.2.2 Characteristics of the Solution p. 150
- 3.2.3 Different Solution Types p. 153
- 3.3 Numerical Solution-The Simplex Method p. 154
- 3.3.1 Features of the Simplex Method p. 154
- 3.3.2 Application of Simplex Method p. 156

- 3.3.3 Solution Using Matlab Code p. 159
- 3.3.4 Solution Using Matlab's Optimization Toolbox p. 161
- 3.4 Additional Examples p. 162
- 3.4.1 Example 3.2-Transportation Problem p. 162
- 3.4.2 Example 3.3-Equality Constraints and Unrestricted Variables p. 169
- 3.4.3 Example 3.4-A Four-Variable Problem p. 175
- 3.5 Additional Topics in Linear Programming p. 182
- 3.5.1 Primal and Dual Problem p. 182
- 3.5.2 Example 3.5 p. 183
- 3.5.3 Sensitivity Analysis p. 195
- References p. 198
- Problems p. 198
- 4 Nonlinear Programming p. 203
- 4.1 Problem Definition p. 204
- 4.1.1 Problem Formulation-Example 4.1 p. 205
- 4.1.2 Additional Optimization Problems p. 207
- 4.2 Mathematical Concepts p. 209
- 4.2.1 Symbolic Computation Using Matlab p. 209
- 4.2.2 Basic Mathematical Concepts p. 213
- 4.2.3 Taylor's Theorem/Series p. 221
- 4.3 Analytical Conditions p. 224
- 4.3.1 Unconstrained Problem p. 225
- 4.3.2 Equality-Constrained Problem 2 p. 230
- 4.3.3 Equality-Constrained Problem 3 p. 236
- 4.3.4 Inequality-Constrained Optimization p. 239
- 4.3.5 A General Optimization Problem p. 246
- 4.4 Examples p. 249
- 4.4.1 Example 4.2-Curve Fitting p. 249
- 4.4.2 Example 4.3-Flagpole Problem p. 251
- 4.4.3 Additional Topics p. 256
- References p. 258
- Problems p. 259
- 5 Numerical Techniques - The One-Dimensional Problem p. 261
- 5.1 Problem Definition p. 262
- 5.1.1 Constrained One-Dimensional Problem p. 262
- 5.1.2 Necessary and Sufficient Conditions p. 263
- 5.1.3 Solution to the Examples p. 263
- 5.2 Numerical Techniques p. 265
- 5.2.1 Features of the Numerical Techniques p. 265
- 5.2.2 Newton-Raphson Technique p. 266
- 5.2.3 Bisection Technique p. 269
- 5.2.4 Polynomial Approximation p. 271
- 5.2.5 Golden Section Method p. 276
- 5.3 Importance of the One-Dimensional Problem p. 279
- 5.4 Additional Examples p. 281
- 5.4.1 Example 5.3-Golden Section Method for Many Variables p. 281

- 5.4.2 Example 5.4-Two-Point Boundary Value Problem p. 283
- 5.4.3 Example 5.5-Root Finding with Golden Section p. 286
- References p. 288
- Problems p. 288
- 6 Numerical Techniques for Unconstrained Optimization p. 290
- 6.1 Problem Definition p. 291
- 6.1.1 Example 6.1 p. 291
- 6.1.2 Graphical Solution p. 291
- 6.1.3 Necessary and Sufficient Conditions p. 292
- 6.1.4 Elements of a Numerical Technique p. 293
- 6.2 Numerical Technique-Nongradient Methods p. 294
- 6.2.1 Scan and Zoom p. 294
- 6.2.2 Random Walk p. 296
- 6.2.3 Pattern Search p. 299
- 6.2.4 Powell's Method p. 302
- 6.3 Numerical Technique-Gradient-Based Methods p. 306
- 6.3.1 Steepest Descent Method p. 306
- 6.3.2 Conjugate Gradient (Fletcher-Reeves) Method p. 310
- 6.3.3 Davidon-Fletcher-Powell Method p. 313
- 6.3.4 Broydon-Fletcher-Goldfarb-Shanno (BFGS) Method p. 317
- 6.4 Numerical Technique-Second Order p. 320
- 6.4.1 Modified Newton's Method p. 321
- 6.5 Additional Examples p. 323
- 6.5.1 Example 6.2-Rosenbrock Problem p. 323
- 6.5.2 Example 6.3-Three-Dimensional Flow near a Rotating Disk p. 326
- 6.5.3 Example 6.4-An Electrical Engineering Problem p. 329
- 6.6 Summary p. 332
- References p. 333
- Problems p. 333
- 7 Numerical Techniques for Constrained Optimization p. 337
- 7.1 Problem Definition p. 338
- 7.1.1 Problem Formulation-Example 7.1 p. 339
- 7.1.2 Necessary Conditions p. 340
- 7.1.3 Elements of a Numerical Technique p. 342
- 7.2 Indirect Methods for Constrained Optimization p. 343
- 7.2.1 Exterior Penalty Function (EPF) Method p. 344
- 7.2.2 Augmented Lagrange Multiplier Method p. 349
- 7.3 Direct Methods for Constrained Optimization p. 354
- 7.3.1 Constrained Scan and Zoom p. 354
- 7.3.2 Expansion of Functions p. 359
- 7.3.3 Sequential Linear Programming (SLP) p. 363
- 7.3.4 Sequential Quadratic Programming (SQP) p. 369
- 7.3.5 Generalized Reduced Gradient (GRG) Method p. 377
- 7.3.6 Sequential Gradient Restoration Algorithm (SGRA) p. 383
- 7.4 Additional Examples p. 389
- 7.4.1 Example 7.2-Flagpole Problem p. 390

- 7.4.2 Example 7.3-I-Beam Design p. 394
- 7.4.3 Example 7.4-Box Design p. 398
- References p. 400
- Problems p. 401
- 8 Discrete Optimization p. 403
- 8.1 Concepts in Discrete Programming p. 405
- 8.1.1 Problem Relaxation p. 406
- 8.1.2 Discrete Optimal Solution p. 407
- 8.2 Discrete Optimization Techniques p. 409
- 8.2.1 Exhaustive Enumeration p. 411
- 8.2.2 Branch and Bound p. 414
- 8.2.3 Dynamic Programming p. 422
- 8.3 Additional Examples p. 427
- 8.3.1 Example 8.4-I-Beam Design-Single Variable? p. 427
- 8.3.2 Zero-One Integer Programming p. 430
- References p. 435
- Problems p. 435
- 9 Global Optimization p. 437
- 9.1 Problem Definition p. 438
- 9.1.1 Global Minimum p. 439
- 9.1.2 Nature of the Solution p. 441
- 9.1.3 Elements of a Numerical Technique p. 443
- 9.2 Numerical Techniques and Additional Examples p. 445
- 9.2.1 Simulated Annealing (SA) p. 445
- 9.2.2 Genetic Algorithm p. 457
- References p. 467
- Problems p. 468
- 10 Optimization Toolbox from Matlab p. 469
- 10.1 The Optimization Toolbox p. 470
- 10.1.1 Programs p. 473
- 10.1.2 Using Programs p. 476
- 10.1.3 Setting Optimization Parameters p. 479
- 10.2 Examples p. 481
- 10.2.1 Linear Programming p. 481
- 10.2.2 Quadratic Programming p. 482
- 10.2.3 Unconstrained Optimization p. 484
- 10.2.4 Constrained Optimization p. 485
- References p. 488
- 11 Hybrid Mathematics - An Application p. 489
- 11.1 Central Idea p. 490
- 11.1.1 Bezier Function-2D p. 490
- 11.1.2 Bezier Function-3D p. 493
- 11.1.3 Data Decoupling p. 495
- 11.1.4 Derivatives p. 495
- 11.2 Data-Handling Examples p. 496
- 11.2.1 Data Fitting with Bezier Functions p. 496

- 11.2.2 Optimum Bezier Solution p. 497
- 11.2.3 Example 11.1-Smooth Data at Equidistant Intervals p. 498
- 11.2.4 Example 11.2-Data Fitting Using Bezier Surface p. 500
- 11.3 Solutions to Differential Systems p. 503
- 11.3.1 Flow over a Rotating Disk p. 504
- 11.3.2 Two-Dimensional Flow Entering a Channel p. 509
- 11.4 Summary p. 517
- References p. 518
- Index p. 521
