

- Preface p. ix
- 1 Digital image processing fundamentals p. 1
- 1.1 Introduction p. 1
- 1.2 Topics of digital image processing and analysis p. 2
- 1.3 Digital image formation p. 4
- 1.4 Digital image representation p. 7
- 1.5 Elementary digital image processing operations p. 13
- 1.6 Digital image display p. 18
- 1.7 Fundamentals of color image processing p. 20
- 1.8 Noise generators for digital image processing p. 38
- References p. 47
- 2 Digital image transform algorithms p. 51
- 2.1 Introduction p. 51
- 2.2 Two-dimensional discrete Fourier transform p. 52
- 2.3 Row--column FFT algorithm p. 59
- 2.4 Memory problems in 2-d DFT calculations p. 68
- 2.5 Vector-radix fast Fourier transform algorithm p. 85
- 2.6 Polynomial transform FFT p. 92
- 2.7 Two-dimensional power spectrum estimation p. 96
- 2.8 Discrete cosine transform p. 103
- 2.9 Two-dimensional discrete cosine transform p. 107
- 2.10 Discrete wavelet transform p. 113
- References p. 117
- 3 Digital image filtering and enhancement p. 121
- 3.1 Introduction p. 121
- 3.2 Direct implementation of two-dimensional FIR digital filters p. 122
- 3.3 Fast Fourier transform implementation of FIR digital filters p. 125
- 3.4 Block methods in the linear convolution calculation p. 128
- 3.5 Inverse filter implementations p. 133
- 3.6 Wiener filters p. 135
- 3.7 Median filter algorithms p. 139
- 3.8 Digital filters based on order statistics p. 149
- 3.9 Signal Adaptive order statistic filters p. 156
- 3.10 Histogram and histogram equalization techniques p. 162
- 3.11 Pseudocoloring algorithms p. 166
- 3.12 Digital image halftoning p. 168
- 3.13 Image interpolation algorithms p. 174
- 3.14 Anisotropic Diffusion p. 177
- 3.15 Image Mosaicing p. 179
- 3.16 Image watermarking p. 180
- References p. 185
- 4 Digital image compression p. 191
- 4.1 Introduction p. 191
- 4.2 Huffman coding p. 192

- 4.3 Run-length coding p. 200
- 4.4 Modified READ coding p. 203
- 4.5 LZW compression p. 205
- 4.6 Predictive coding p. 221
- 4.7 Transform image coding p. 229
- 4.8 JPEG2000 compression standard p. 235
- References p. 239
- 5 Edge detection algorithms p. 241
- 5.1 Introduction p. 241
- 5.2 Edge detection p. 242
- 5.3 Edge thresholding p. 249
- 5.4 Hough transform p. 249
- 5.5 Edge-following algorithms p. 257
- References p. 273
- 6 Image segmentation algorithms p. 275
- 6.1 Introduction p. 275
- 6.2 Image segmentation by thresholding p. 277
- 6.3 Split/merge and region growing algorithms p. 282
- 6.4 Relaxation algorithms in region analysis p. 297
- 6.5 Connected component labeling p. 300
- 6.6 Texture description p. 303
- References p. 319
- 7 Shape description p. 323
- 7.1 Introduction p. 323
- 7.2 Chain codes p. 324
- 7.3 Polygonal approximations p. 329
- 7.4 Fourier descriptors p. 334
- 7.5 Quadtrees p. 336
- 7.6 Pyramids p. 342
- 7.7 Shape features p. 348
- 7.8 Moment descriptors p. 352
- 7.9 Thinning algorithms p. 356
- 7.10 Mathematical morphology p. 361
- 7.11 Grayscale morphology p. 369
- 7.12 Skeletons p. 372
- 7.13 Shape decomposition p. 376
- 7.14 Voronoi tessellation p. 382
- 7.15 Watershed transform p. 385
- 7.16 Face detection and recognition p. 386
- References p. 393
- 8 Digital Image Processing Lab Exercises Using EIKONA p. 401
- 8.1 Introduction p. 401
- 8.2 Overview p. 401
- 8.3 Structure p. 402

- 8.4 BW image processing p. 405
- 8.4.1 Black-and-White p. 405
- 8.4.2 Basic p. 405
- 8.4.3 Processing p. 405
- 8.4.4 Analysis p. 405
- 8.4.5 Transforms p. 406
- 8.4.6 Filtering p. 406
- 8.4.7 Nonlinear filtering p. 406
- 8.5 Color image processing p. 406
- 8.5.1 Basic p. 406
- 8.5.2 Processing p. 407
- 8.5.3 Analysis p. 407
- 8.5.4 Color Representation p. 407
- 8.6 Modules p. 407
- 8.6.1 Arts module p. 408
- 8.6.2 Crack Restoration p. 410
- 8.6.3 Watermark module p. 412
- 8.7 EIKONA Source, Library/DLL p. 413
- 8.8 Instructions for using the educational material p. 413
- References p. 417
- Index p. 418
