

- Introduction
- Part I Material properties and product attributes
  - The Nature of Materials
  - Mechanical Properties of Materials
  - Physical Properties of Materials
  - Dimensions, Tolerances, and Surfaces
- Part II Engineering Materials
  - Metals
  - Ceramics
  - Polymers
  - Composite Materials
- Part III Solidification Processes
  - Fundamentals of Metal Casting
  - Metal Casting Processes
  - Glassworking
  - Shaping Processes for Plastics
  - Rubber Processing Technology
  - Shaping Processes for Polymer Matrix Composites
- Part IV Particulate Processing Of Metals And Ceramics
  - Powder Metallurgy
  - Processing of Ceramics and Cermets
- Part V Metal Forming And Sheet Metalworking
  - Fundamentals of Metal Forming
  - Bulk Deformation Processes in Metal Working
  - Sheet Metal Working
- Part VI Material Removal Processes
  - Theory of Metal Machining.Machining Operations and Machine Tools
  - Cutting Tool Technology
  - Economic and Product Design Considerations in Machining
  - Grinding and Other Abrasive Processes
  - Nontraditional Machining and Thermal Cutting Processes
- Part VII Property Enhancing And Surface Processing Operations
  - Heat Treatment of Metals
  - Cleaning and Surface Treatments
  - Coating and Deposition Processes
- Part VIII Joining And Assembly Processes
  - Fundamentals of Welding
  - Welding Processes
  - Brazing, Soldering,and Adhesive Bonding
  - Mechanical Assembly
- Part IX Special Processing And Assembly Technologies
  - Rapid Prototyping
  - Processing of Integrated Circuits
  - Electronics Assembly and Packaging
  - Microfabrication Technologies
- Part X Manufacturing Systems

- Numerical Control and Industrial Robotics
- Group Technology and Flexible Manufacturing Systems
- Production Lines
- Part XI Manufacturing Support Systems
- Manufacturing Engineering
- Production Planning and Control
- Quality Control
- Measurement and Inspection
- Index
