

- Foreword p. xi
- Preface p. xv
- 1 Fundamental Logic and the Definition of Engineering Tasks p. 1
- 1.1 Three Types of Inference p. 1
- 1.2 Engineering Tasks p. 3
- 1.3 A Model of Information and Tasks p. 5
- 1.4 Another Task Definition p. 8
- 1.5 The Five Orders of Ignorance p. 8
- 1.6 Summary p. 9
- References p. 10
- Exercises p. 10
- 2 Complexity p. 11
- 2.1 Program Execution Time versus Task Size p. 12
- 2.1.1 Estimating the Execution Time of a Program p. 12
- 2.2 'Big Oh' Notation p. 14
- 2.2.1 Definition of the Big Oh Notation p. 14
- 2.2.2 Big Oh and Tightness of Bound p. 15
- 2.2.3 Classification of Functions p. 20
- 2.2.4 Examples p. 21
- 2.2.5 Tractability and Algorithm Optimality p. 29
- 2.3 Practical Methods for Determining the Complexity of Algorithms p. 30
- 2.4 P, NP and NP-Completeness p. 33
- 2.4.1 Zero-One Integer Programming Problem p. 35
- 2.4.2 Classes of NP-complete Problems p. 36
- 2.5 Summary p. 36
- Reference p. 37
- Further Reading p. 37
- Exercises p. 37
- 3 Data Structures p. 41
- 3.1 Introduction p. 41
- 3.2 Definitions p. 41
- 3.3 Derived Data Types p. 42
- 3.3.1 Examples of Derived Data Types p. 42
- 3.3.2 User-Defined Data Types p. 45
- 3.4 Abstract Data Types p. 46
- 3.4.1 Linked Lists p. 47
- 3.4.2 Graphs p. 50
- 3.4.3 Trees p. 52
- 3.4.4 Stacks p. 56
- 3.4.5 Queues p. 60
- 3.5 Conceptual Structural Design of Buildings p. 63
- 3.6 Summary p. 69
- Further Reading p. 70
- Exercises p. 70
- 4 Object Representation and Reasoning p. 77
- 4.1 Introduction p. 77

- 4.2 Grouping Data and Methods p. 77
- 4.3 Definitions and Basic Concepts p. 78
 - 4.3.1 Classes and Objects p. 78
 - 4.3.2 Object-Oriented Programming p. 79
 - 4.3.3 Messages p. 79
- 4.4 Important Characteristics of Objects p. 80
 - 4.4.1 Encapsulation of Data and Methods p. 80
 - 4.4.2 Message-Passing Mechanism p. 81
 - 4.4.3 Abstraction Hierarchy p. 81
 - 4.4.4 Secondary Features of Object Representation p. 84
 - 4.4.5 Decomposition versus Abstraction p. 85
- 4.5 Applications outside Programming p. 86
- 4.6 An Object-Oriented Design Methodology p. 86
 - 4.6.1 Single versus Multiple Inheritance p. 86
 - 4.6.2 Message-Passing Architecture p. 87
- 4.7 Summary p. 88
- References p. 88
- Further Reading p. 88
- Exercises p. 88
- 5 Database Concepts p. 95
 - 5.1 Introduction p. 95
 - 5.2 Basic Concepts p. 96
 - 5.2.1 Initial Definitions p. 96
 - 5.2.2 Evolution of Different Types of Database p. 96
 - 5.2.3 The Three-Level Architecture p. 97
 - 5.3 Relational Database Systems p. 97
 - 5.3.1 The Relational Model p. 99
 - 5.3.2 Limitations of Relational Databases p. 102
 - 5.3.3 Accessing Data in Relational Databases p. 104
 - 5.4 Relational Database Design p. 105
 - 5.4.1 First Normal Form p. 106
 - 5.4.2 Second Normal Form p. 106
 - 5.4.3 Third Normal Form p. 109
 - 5.4.4 Boyce-Codd and Higher Normal Forms p. 111
 - 5.4.5 Importance of Database Design p. 111
 - 5.5 Transaction Processing p. 111
 - 5.5.1 Definition of Transaction p. 113
 - 5.5.2 Implementing Transactions p. 113
 - 5.5.3 Properties of Transactions p. 115
 - 5.6 Other Types of Database p. 115
 - 5.6.1 Object-Oriented Databases p. 115
 - 5.6.2 Geographic Databases p. 116
 - 5.6.3 Multimedia Database Systems p. 116
 - 5.6.4 Distributed Databases p. 117
 - 5.7 Summary p. 117
 - Reference p. 118

- Further Reading p. 118
- Exercises p. 118
- 6 Computational Mechanics p. 123
 - 6.1 Introduction p. 123
 - 6.1.1 Challenges of Computational Mechanics p. 124
 - 6.2 From Physical Principles to Practical Systems p. 124
 - 6.3 Methods for Finding Solutions p. 126
 - 6.3.1 Galerkin Method p. 127
 - 6.3.2 Remarks p. 128
 - 6.4 Issues in Computer-Aided Engineering p. 129
 - 6.4.1 Accuracy p. 129
 - 6.4.2 Speed p. 130
 - 6.4.3 User Interaction p. 131
 - 6.5 Summary p. 131
 - References p. 131
 - Further Reading p. 131
- 7 Constraint-Based Reasoning p. 133
 - 7.1 Introduction p. 133
 - 7.2 Terminology p. 135
 - 7.3 Constraint-Solving Methods p. 136
 - 7.3.1 Levels of Consistency for Label Propagation p. 137
 - 7.3.2 Global Consistency in Label Propagation p. 138
 - 7.3.3 Constraint Propagation p. 139
 - 7.4 Reasoning with Constraints on Discrete Variables p. 139
 - 7.4.1 CSP Complexity for Discrete Variables p. 141
 - 7.5 Reasoning with Constraints on Continuous Variables p. 141
 - 7.5.1 Constraint-Based Support p. 141
 - 7.6 Summary p. 145
 - Reference p. 146
- 8 Optimization and Search p. 147
 - 8.1 Introduction p. 147
 - 8.2 Basic Concepts p. 148
 - 8.2.1 Types of Optimization Problem p. 149
 - 8.2.2 Formulating Optimization Tasks p. 151
 - 8.2.3 Representing Search Spaces p. 152
 - 8.2.4 Representing Constraints p. 153
 - 8.2.5 Some Optimization Problems p. 154
 - 8.3 Classification of Methods p. 156
 - 8.4 Deterministic Optimization and Search p. 157
 - 8.4.1 Special Cases p. 157
 - 8.4.2 Deterministic Methods p. 162
 - 8.5 Stochastic Methods p. 168
 - 8.5.1 Pure Global Random Search p. 169
 - 8.5.2 Local Search with Multiple Random Starts p. 169
 - 8.5.3 Simulated Annealing p. 170
 - 8.5.4 Genetic Algorithms p. 171

- 8.5.5 Controlled Random Search p. 172
- 8.5.6 PGSL p. 172
- 8.6 A Closer Look at Genetic Algorithms p. 175
- 8.6.1 Representation: Genetic Encoding p. 175
- 8.6.2 Evaluating an Individual p. 176
- 8.6.3 Creating the Initial Population p. 176
- 8.6.4 The Fitness Function p. 176
- 8.6.5 Reproduction p. 177
- 8.6.6 Mutation p. 179
- 8.7 Summary of Methods p. 179
- References p. 180
- Further Reading p. 180
- Exercises p. 181
- 9 Knowledge Systems for Decision Support p. 187
- 9.1 Introduction p. 187
- 9.2 Important Characteristics of Knowledge Systems p. 188
- 9.3 Representation of Knowledge p. 189
- 9.3.1 Representation of Knowledge in Knowledge Systems p. 192
- 9.4 Reasoning with Knowledge p. 192
- 9.4.1 Rule Selection and Conflict Resolution p. 194
- 9.5 Importance of the User Interface p. 195
- 9.6 Maintenance of Knowledge p. 196
- 9.7 Model-Based Reasoning p. 196
- 9.8 Case-Based Reasoning p. 197
- 9.8.1 Stages of Case-Based Reasoning p. 197
- 9.9 Summary p. 203
- Reference p. 203
- Further Reading p. 203
- 10 Machine Learning p. 205
- 10.1 Introduction p. 205
- 10.2 Improving Performance with Experience p. 206
- 10.3 Formalizing the Learning Task p. 208
- 10.3.1 Searching Hypothesis Spaces p. 211
- 10.4 Learning Algorithms p. 212
- 10.4.1 Rote Learning p. 212
- 10.4.2 Statistical Learning Techniques p. 213
- 10.4.3 Deductive Learning p. 217
- 10.4.4 Exploration and Discovery p. 218
- 10.5 A Closer Look at Artificial Neural Networks p. 218
- 10.5.1 Types of Neural Network p. 223
- 10.5.2 Learning in Neural Networks p. 223
- 10.5.3 Summary p. 224
- 10.6 Summary p. 224
- References p. 225
- Further Reading p. 225
- Exercises p. 225

- 11 Geometric Modelling p. 227
- 11.1 Introduction p. 227
- 11.2 Engineering Applications p. 227
- 11.2.1 Criteria for Evaluating Representations p. 228
- 11.3 Mathematical Models for Representing Geometry p. 229
- 11.3.1 Two-Dimensional Representation of Simple Shapes p. 229
- 11.3.2 Curves without Simple Mathematical Representations p. 230
- 11.3.3 Bezier Curves p. 230
- 11.3.4 Mathematical Representation of Simple Surfaces p. 232
- 11.3.5 Bezier Patches p. 234
- 11.3.6 Mathematical Representation of Regular-Shaped Solids p. 234
- 11.4 Representing Complex Solids p. 235
- 11.4.1 Primitive Instancing p. 236
- 11.4.2 Mesh Representations p. 236
- 11.4.3 Sweep Representations p. 238
- 11.4.4 Boundary Representations p. 239
- 11.4.5 Decomposition Models p. 241
- 11.4.6 Constructive Solid Geometry p. 244
- 11.5 Applications p. 245
- 11.5.1 Estimation of Volume p. 245
- 11.5.2 3D Graphical View of a Structure p. 249
- 11.6 Summary p. 249
- Further Reading p. 250
- 12 Computer Graphics p. 251
- 12.1 Introduction p. 251
- 12.2 Tasks of Computer Graphics p. 251
- 12.3 Display Devices p. 252
- 12.3.1 Types of Display Device p. 252
- 12.3.2 From Geometrical Representations to Graphical Displays p. 253
- 12.4 Representing Graphics p. 253
- 12.4.1 Representing Colours p. 254
- 12.4.2 Coordinate System p. 254
- 12.4.3 Bitmap Representations p. 255
- 12.4.4 Higher-Level Representations p. 256
- 12.5 The Graphics Pipeline p. 257
- 12.5.1 Modelling Transformations p. 257
- 12.5.2 Viewing Transformations p. 261
- 12.5.3 Scan Conversion p. 267
- 12.6 Interactive Graphics p. 268
- 12.7 Summary p. 269
- Further Reading p. 269
- 13 Distributed Applications and the Web p. 271
- 13.1 Introduction p. 271
- 13.1.1 A Simple Example of a Client-Server System p. 272
- 13.1.2 Definitions p. 273
- 13.1.3 Trends Driving C/S Architecture p. 273

- 13.2 Examples of Client-Server Applications p. 275
- 13.2.1 File Servers p. 275
- 13.2.2 FTP Servers p. 275
- 13.2.3 Database Servers p. 276
- 13.2.4 Groupware Servers p. 276
- 13.2.5 Object Servers p. 276
- 13.2.6 Operating System Servers p. 276
- 13.2.7 Display Servers p. 277
- 13.2.8 Web Servers p. 277
- 13.2.9 Application Servers p. 278
- 13.3 Distinctive Features of C/S Systems p. 278
- 13.3.1 Asymmetrical Protocol p. 278
- 13.3.2 Message-Based Mechanism p. 279
- 13.3.3 Why Are Protocols Important? p. 281
- 13.4 Client-Server System Design p. 281
- 13.4.1 Three-Tier Architecture p. 282
- 13.4.2 Application Partitioning p. 283
- 13.5 Advantages of Client-Server Systems p. 284
- 13.6 Developing Client-Server Applications p. 285
- 13.6.1 TCP/IP Sockets p. 285
- 13.6.2 Other Middleware Options p. 286
- 13.7 The World Wide Web p. 286
- 13.7.1 Limitations of Exchanging Only Static Information p. 287
- 13.7.2 Common Gateway Interface p. 287
- 13.7.3 Engineering Applications on the Web p. 288
- 13.7.4 Other Models for Dynamic Information Exchange p. 288
- 13.8 Peer-to-Peer Networks p. 289
- 13.8.1 Information Interchange through P2P Networks p. 291
- 13.8.2 P2P Networks for Engineering Applications p. 291
- 13.8.3 Advantages of Peer-to-Peer Networks p. 292
- 13.8.4 Issues and Challenges p. 293
- 13.9 Agent Technology p. 293
- 13.9.1 Issues in Multi-Agent Systems p. 294
- 13.10 Summary p. 295
- Reference p. 295
