

- Preface p. xi
- 1 Telecommunications p. 1
- 1.1 Usage today p. 1
- 1.2 History p. 1
- 1.3 Basic elements p. 5
- 1.3.1 Transmitter side p. 6
- 1.3.2 The channel p. 6
- 1.3.3 Receiver side p. 6
- 1.3.4 Another system for communication p. 7
- 1.3.5 The scope of the book p. 7
- 1.4 Multiple user systems p. 8
- 1.4.1 Methods for multiple access p. 8
- 1.4.2 Continued analysis p. 15
- 1.5 Appendix: the division and usage of the electromagnetic spectrum p. 15
- 2 Link Budget p. 19
- 2.1 Signal to noise ratio p. 19
- 2.1.1 Calculation of the signal power p. 20
- 2.1.2 Calculation of noise p. 24
- 2.1.3 SNR in digital transmission p. 30
- 3 Information Theory and Source Coding p. 37
- 3.1 The concept of information p. 38
- 3.1.1 Discrete source p. 40
- 3.1.2 Continuous source p. 41
- 3.2 Channel p. 43
- 3.2.1 Mutual information p. 44
- 3.2.2 Channel models p. 46
- 3.2.3 Calculation of channel capacity p. 48
- 3.3 Source coding p. 55
- 3.3.1 Data compression p. 56
- 3.3.2 Speech coding p. 70
- 3.4 Appendix p. 76
- 3.4.1 Example of image coding, MPEG p. 76
- 4 Channel Coding p. 81
- 4.1 Error detection and error correction p. 81
- 4.1.1 Fundamental concepts in block coding p. 83
- 4.1.2 Performance of block codes p. 86
- 4.2 Automatic repeat request p. 95
- 4.2.1 Function of ARQ systems p. 95
- 4.2.2 Performance of ARQ systems p. 97
- 4.3 Block codes p. 100
- 4.3.1 Galois fields p. 100
- 4.3.2 Linear block codes p. 102
- 4.3.3 Cyclic codes p. 111
- 4.3.4 Non-binary block codes p. 123
- 4.3.5 Modifying block codes p. 126
- 4.4 Convolutional codes p. 129

- 4.4.1 Description of convolutional codes p. 129
- 4.4.2 Performance of convolutional codes p. 135
- 4.4.3 Decoding of convolutional codes p. 141
- 4.5 Interleaving p. 155
- 4.6 Turbo coding p. 157
- 4.6.1 Coding p. 158
- 4.6.2 Decoding p. 159
- 4.7 Cryptography p. 170
- 4.7.1 The RSA algorithm p. 174
- 4.8 Appendix p. 177
- 4.8.1 Examples on application of error correcting coding p. 181
- 5 Modulation p. 185
- 5.1 Baseband modulation p. 186
- 5.1.1 Precoding p. 187
- 5.1.2 Pulse shapes for lowpass channels p. 188
- 5.2 Calculation methods for bandpass systems and signals p. 192
- 5.3 Analogue carrier modulation p. 202
- 5.3.1 Analogue amplitude modulation p. 203
- 5.3.2 Analogue phase and frequency modulation p. 215
- 5.4 Digital carrier modulation p. 222
- 5.4.1 Digital amplitude modulation p. 223
- 5.4.2 Digital phase and frequency modulation p. 225
- 5.4.3 Non-linear methods with memory p. 227
- 5.4.4 Spectrum in digital modulation p. 237
- 5.4.5 Combined modulation and error correction coding p. 251
- 5.4.6 Transmission using multiple carriers p. 258
- 5.5 Appendix p. 260
- 5.5.1 Various frequency pulses p. 260
- 5.5.2 Computing spectra for signals with large state diagrams p. 261
- 6 Detection in Noise p. 265
- 6.1 Fundamentals of narrowband noise p. 266
- 6.2 Analogue systems p. 269
- 6.2.1 Influence of noise at amplitude modulation p. 269
- 6.2.2 Noise in angle modulation p. 274
- 6.3 Digital systems p. 280
- 6.3.1 Optimal receiver p. 281
- 6.3.2 Signal space p. 289
- 6.3.3 Calculation of bit error rate p. 297
- 6.3.4 Calculation of error rate for a complicated decision space p. 313
- 6.3.5 Non-coherent receivers p. 316
- 6.3.6 Comparison of some types of modulation p. 326
- 6.4 Diversity p. 337
- 6.4.1 Methods of combination p. 338
- 6.4.2 Bit error rate p. 339
- 6.5 The radio receiver p. 340
- 6.6 Appendix p. 343

- 6.6.1 Error probabilities for some cases of modulation p. 343
- 6.6.2 The Q-function p. 343
- 6.6.3 Some important density functions in communication p. 345
- 6.6.4 Norm p. 345
- 7 Adaptive Channel Equalisers p. 351
- 7.1 Channel equaliser p. 352
- 7.1.1 Zero forcing equaliser p. 353
- 7.1.2 Equalisers based on minimum mean square error p. 354
- 7.2 Algorithms for adaptation p. 358
- 7.2.1 The LMS algorithm p. 361
- 7.2.2 The recursive least squares algorithm p. 370
- 7.3 Appendix p. 374
- 7.3.1 Systolic array p. 374
- 8 Adaptive Antennas p. 377
- 8.1 Array antennas p. 377
- 8.1.1 Antennas with steerable main beam p. 378
- 8.1.2 Vector description of the output signal of array antennas p. 382
- 8.1.3 Multilobe antennas p. 384
- 8.2 Signal processing with array antennas p. 388
- 8.2.1 The reference signal method p. 388
- 8.2.2 The linear constraint minimum variance method p. 389
- 8.2.3 MUSIC p. 392
- 8.3 Spatio-temporal equalisers p. 396
- 8.3.1 The transmission channel p. 396
- 8.3.2 ST-MLSE p. 399
- 8.3.3 ST-MMSE p. 402
- 8.3.4 Estimation of channel parameters p. 404
- 9 CDMA: Codes and Detectors p. 407
- 9.1 Spreading codes p. 408
- 9.1.1 Walsh codes p. 409
- 9.1.2 m-Sequences p. 411
- 9.1.3 Gold sequences p. 415
- 9.1.4 Kasami sequences p. 416
- 9.2 Detectors for CDMA p. 416
- 9.2.1 Linear detectors p. 418
- 9.2.2 Interference cancellation p. 422
- 9.3 Appendix: generator polynomials for m-sequences p. 424
- 10 Synchronisation p. 425
- 10.1 Introduction p. 425
- 10.2 Fundamentals of phase locked loops p. 426
- 10.2.1 Analysis of an analogue phase-locked loop p. 426
- 10.2.2 Digital phase locked loop p. 432
- 10.3 Carrier synchronisation p. 434
- 10.3.1 Squaring loop p. 435
- 10.3.2 Costas loop p. 436
- 10.4 Clock synchronisation p. 437

- 10.5 Frame synchronisation p. 438
- 10.5.1 Synchronisation probability p. 438
- 10.5.2 Synchronisation codes p. 440
- 10.5.3 Locking strategies p. 441
- Appendix A p. 443
- A.1 Review of mobile telephone systems p. 443
- A.1.1 Second generation systems p. 444
- A.1.2 Third generation systems p. 445
- A.1.3 Roaming p. 445
- A.2 Review of systems for cordless telephones p. 447
- A.3 Review of television systems p. 448
- A.4 Digital Television p. 449
- A.4.1 Source coding p. 449
- A.4.2 Modulation p. 450
- A.4.3 Channel coding p. 451
- A.5 FM broadcasting and RDS p. 453
- A.6 Digital audio broadcasting p. 455
- A.6.1 Source coding p. 455
- A.6.2 Channel coding p. 456
- A.6.3 Modulation p. 456
- Answers to exercises p. 457
- Index p. 463
