

- Preface p. xi
- List of Abbreviations p. xv
- Part 1 Introduction and Background p. 1
- 1 Introduction p. 3
- 1.1 The Asynchronous Transfer Mode p. 3
- 1.2 Standards Committees p. 4
- Problems p. 9
- 2 Basic Concepts from Computer Networks p. 11
- 2.1 Communication Networking Techniques p. 11
- 2.2 The Open System Interconnection (OSI) Reference Model p. 13
- 2.3 Data Link Layer p. 14
- 2.4 The High Data Link Control (HDLC) Protocol p. 18
- 2.5 Synchronous Time Division Multiplexing (TDM) p. 20
- 2.6 The Logical Link Control (LLC) Layer p. 22
- 2.7 Network Access Protocol X.25 p. 24
- 2.8 The Internet Protocol (IP) p. 26
- 2.8.1 The IP Header p. 26
- 2.8.2 IP Addresses p. 28
- 2.8.3 ARP, RARP and ICMP p. 30
- 2.8.4 IP Version 6 (IPv6) p. 31
- Problems p. 31
- 3 Frame Relay p. 33
- 3.1 Motivation and Basic Features p. 33
- 3.2 The Frame Relay UNI p. 35
- 3.3 Congestion Control p. 38
- Problems p. 41
- Part 2 The ATM Architecture p. 43
- 4 Main Features of ATM Networks p. 45
- 4.1 Introduction p. 45
- 4.2 Structure of the ATM Cell Header p. 48
- 4.2.1 Generic Flow Control (GFC) p. 48
- 4.2.2 Virtual Path Identifier/Virtual Channel Identifier (VPI/VCI) p. 48
- 4.2.3 Payload Type Indicator (PTI) p. 50
- 4.2.4 Cell Loss Priority (CLP) Bit p. 51
- 4.2.5 Header Error Control (HEC) p. 51
- 4.3 The ATM Protocol Stack p. 52
- 4.3.1 The Physical Layer p. 52
- 4.3.2 The ATM Layer p. 53
- 4.3.3 The ATM Adaptation Layer p. 55
- 4.3.4 Higher Level Layers p. 56
- 4.4 ATM Interfaces p. 56
- 4.5 The Physical Layer p. 58
- 4.5.1 The Transmission Convergence (TC) Sublayer p. 58
- 4.5.2 The Physical Medium-Dependent (PMD) Sublayer p. 59
- 4.5.3 ATM Physical Layer Interfaces p. 60
- 4.6 UTOPIA and WIRE p. 64

- Problems p. 64
- 5 The ATM Adaptation Layer p. 67
 - 5.1 Introduction p. 67
 - 5.2 ATM Adaptation Layer 1 (AAL 1) p. 69
 - 5.2.1 The AAL 1 SAR sublayer p. 69
 - 5.2.2 The AAL 1 CS sublayer p. 71
 - 5.3 ATM Adaptation Layer 2 (AAL 2) p. 73
 - 5.4 ATM Adaptation Layer 3/4 (AAL 3/4) p. 76
 - 5.5 ATM Adaptation Layer 5 (AAL 5) p. 79
 - Problems p. 80
- 6 ATM Switch Architectures p. 81
 - 6.1 Introduction p. 81
 - 6.2 Space-Division Switch Architectures p. 83
 - 6.2.1 The Cross-Bar Switch p. 83
 - 6.2.2 Banyan Networks p. 86
 - 6.2.3 Clos Networks p. 93
 - 6.2.4 Switch Architectures with N^2 Disjoint Paths p. 93
 - 6.3 Shared Memory ATM Switch Architectures p. 94
 - 6.4 Shared Medium ATM Switch Architectures p. 96
 - 6.5 Nonblocking Switches with Output Buffering p. 98
 - 6.6 Multicasting in an ATM Switch p. 99
 - 6.7 Scheduling Algorithms p. 100
 - 6.8 The Lucent AC120 Switch p. 103
 - 6.9 Performance Evaluation of an ATM Switch p. 105
 - Problems p. 106
- Appendix A Simulation Model of an ATM Multiplexer--Part 1 p. 107
- 7 Congestion Control in ATM Networks p. 111
 - 7.1 Traffic Characterization p. 111
 - 7.1.1 Standardized Traffic Descriptors p. 114
 - 7.1.2 Empirical Models p. 114
 - 7.1.3 Probabilistic Models p. 115
 - 7.2 Quality of Service (QoS) Parameters p. 117
 - 7.3 ATM Service Categories p. 120
 - 7.4 Congestion Control p. 122
 - 7.5 Preventive Congestion Control p. 122
 - 7.6 Call Admission Control (CAC) p. 123
 - 7.6.1 Equivalent Bandwidth p. 125
 - 7.6.2 The ATM Block Transfer (ABT) Scheme p. 128
 - 7.6.3 Virtual Path Connections p. 129
 - 7.7 Bandwidth Enforcement p. 131
 - 7.7.1 The Generic Cell Rate Algorithm (GCRA) p. 132
 - 7.7.2 Packet Discard Schemes p. 135
 - 7.8 Reactive Congestion Control p. 136
 - 7.8.1 The Available Bit Rate (ABR) Service p. 136
 - Problems p. 141
- Appendix A Simulation Model of an ATM Multiplexer--Part 2 p. 142

- Appendix Estimating the ATM Traffic Parameters of a Video Source p. 144
- Part 3 Deployment of ATM p. 147
- 8 Transporting IP Traffic Over ATM p. 149
- 8.1 Introduction p. 149
- 8.2 LAN Emulation (LE) p. 150
- 8.3 Classical IP and ARP over ATM p. 154
- 8.3.1 ATMARP p. 155
- 8.3.2 IP Multicasting over ATM p. 156
- 8.4 Next Hop Resolution Protocol (NHRP) p. 160
- 8.5 IP Switching p. 163
- 8.6 Tag Switching p. 166
- 8.7 Multi-Protocol Label Switching (MPLS) p. 172
- Problems p. 174
- 9 ADSL-Based Access Networks p. 175
- 9.1 Introduction p. 175
- 9.2 The ADSL Technology p. 178
- 9.2.1 The Discrete Multi-Tone (DMT) Technique p. 180
- 9.2.2 Bearer Channels p. 181
- 9.2.3 The ADSL Super Frame p. 182
- 9.3 Schemes for Accessing Network Service Providers p. 182
- 9.3.1 The L2TP Access Aggregation Scheme p. 184
- 9.3.2 The PPP Terminated Aggregation Scheme p. 185
- Problems p. 186
- Part 4 Signaling in ATM Networks p. 187
- 10 Signaling over the UNI p. 189
- 10.1 Connection Types p. 189
- 10.2 The Signaling Protocol Stack p. 190
- 10.3 The Signaling ATM Adaptation Layer (SAAL) p. 190
- 10.3.1 The SSCOP p. 191
- 10.3.2 Primitives p. 192
- 10.4 The Signaling Channel p. 194
- 10.5 ATM Addressing p. 195
- 10.6 The Format of the Signaling Message p. 197
- 10.7 The Signaling Protocol Q.2931 p. 199
- 10.7.1 Information Elements (IE) p. 199
- 10.7.2 Q.2931 Messages p. 202
- 10.8 The Signaling Protocol Q.2971 p. 204
- 10.9 Leaf Initiated Join (LIJ) Capability p. 206
- 10.10 ATM Anycast Capability p. 208
- Problems p. 209
- 11 The Private Network-Network Interface (PNNI) p. 211
- 11.1 Introduction p. 211
- 11.2 The PNNI Routing Protocol p. 212
- 11.2.1 The Lowest-Level Peer Groups p. 212
- 11.2.2 The Next Level of Peer Groups p. 214
- 11.2.3 Uplinks p. 215

- 11.2.4 Information Exchange in the PNNI Hierarchy p. 216
- 11.2.5 The Highest-Level Peer Group p. 217
- 11.2.6 A Node's View of the PNNI Hierarchy p. 219
- 11.2.7 Address Summarization p. 220
- 11.2.8 Level Indicators p. 222
- 11.2.9 Path Selection p. 222
- 11.3 The PNNI Signaling Protocol p. 223
- Problems p. 224
- Appendix List of standards p. 227
- Index p. 229
