

- Preface p. ix
- 1 The Poisson Process and Related Processes p. 1
- 1.0 Introduction p. 1
- 1.1 The Poisson Process p. 1
- 1.1.1 The Memoryless Property p. 2
- 1.1.2 Merging and Splitting of Poisson Processes p. 6
- 1.1.3 The M/G/[infinity] Queue p. 9
- 1.1.4 The Poisson Process and the Uniform Distribution p. 15
- 1.2 Compound Poisson Processes p. 18
- 1.3 Non-Stationary Poisson Processes p. 22
- 1.4 Markov Modulated Batch Poisson Processes p. 24
- Exercises p. 28
- Bibliographic Notes p. 32
- References p. 32
- 2 Renewal-Reward Processes p. 33
- 2.0 Introduction p. 33
- 2.1 Renewal Theory p. 34
- 2.1.1 The Renewal Function p. 35
- 2.1.2 The Excess Variable p. 37
- 2.2 Renewal-Reward Processes p. 39
- 2.3 The Formula of Little p. 50
- 2.4 Poisson Arrivals See Time Averages p. 53
- 2.5 The Pollaczek-Khintchine Formula p. 58
- 2.6 A Controlled Queue with Removable Server p. 66
- 2.7 An Up- And Downcrossing Technique p. 69
- Exercises p. 71
- Bibliographic Notes p. 78
- References p. 78
- 3 Discrete-Time Markov Chains p. 81
- 3.0 Introduction p. 81
- 3.1 The Model p. 82
- 3.2 Transient Analysis p. 87
- 3.2.1 Absorbing States p. 89
- 3.2.2 Mean First-Passage Times p. 92
- 3.2.3 Transient and Recurrent States p. 93
- 3.3 The Equilibrium Probabilities p. 96
- 3.3.1 Preliminaries p. 96
- 3.3.2 The Equilibrium Equations p. 98
- 3.3.3 The Long-run Average Reward per Time Unit p. 103
- 3.4 Computation of the Equilibrium Probabilities p. 106
- 3.4.1 Methods for a Finite-State Markov Chain p. 107
- 3.4.2 Geometric Tail Approach for an Infinite State Space p. 111
- 3.4.3 Metropolis-Hastings Algorithm p. 116
- 3.5 Theoretical Considerations p. 119
- 3.5.1 State Classification p. 119
- 3.5.2 Ergodic Theorems p. 126

- Exercises p. 134
- Bibliographic Notes p. 139
- References p. 139
- 4 Continuous-Time Markov Chains p. 141
- 4.0 Introduction p. 141
- 4.1 The Model p. 142
- 4.2 The Flow Rate Equation Method p. 147
- 4.3 Ergodic Theorems p. 154
- 4.4 Markov Processes on a Semi-Infinite Strip p. 157
- 4.5 Transient State Probabilities p. 162
- 4.5.1 The Method of Linear Differential Equations p. 163
- 4.5.2 The Uniformization Method p. 166
- 4.5.3 First Passage Time Probabilities p. 170
- 4.6 Transient Distribution of Cumulative Rewards p. 172
- 4.6.1 Transient Distribution of Cumulative Sojourn Times p. 173
- 4.6.2 Transient Reward Distribution for the General Case p. 176
- Exercises p. 179
- Bibliographic Notes p. 185
- References p. 185
- 5 Markov Chains and Queues p. 187
- 5.0 Introduction p. 187
- 5.1 The Erlang Delay Model p. 187
- 5.1.1 The M/M/1 Queue p. 188
- 5.1.2 The M/M/c Queue p. 190
- 5.1.3 The Output Process and Time Reversibility p. 192
- 5.2 Loss Models p. 194
- 5.2.1 The Erlang Loss Model p. 194
- 5.2.2 The Engset Model p. 196
- 5.3 Service-System Design p. 198
- 5.4 Insensitivity p. 202
- 5.4.1 A Closed Two-node Network with Blocking p. 203
- 5.4.2 The M/G/1 Queue with Processor Sharing p. 208
- 5.5 A Phase Method p. 209
- 5.6 Queueing Networks p. 214
- 5.6.1 Open Network Model p. 215
- 5.6.2 Closed Network Model p. 219
- Exercises p. 224
- Bibliographic Notes p. 230
- References p. 231
- 6 Discrete-Time Markov Decision Processes p. 233
- 6.0 Introduction p. 233
- 6.1 The Model p. 234
- 6.2 The Policy-Improvement Idea p. 237
- 6.3 The Relative Value Function p. 243
- 6.4 Policy-Iteration Algorithm p. 247
- 6.5 Linear Programming Approach p. 252

- 6.6 Value-Iteration Algorithm p. 259
- 6.7 Convergence Proofs p. 267
- Exercises p. 272
- Bibliographic Notes p. 275
- References p. 276
- 7 Semi-Markov Decision Processes p. 279
- 7.0 Introduction p. 279
- 7.1 The Semi-Markov Decision Model p. 280
- 7.2 Algorithms for an Optimal Policy p. 284
- 7.3 Value Iteration and Fictitious Decisions p. 287
- 7.4 Optimization of Queues p. 290
- 7.5 One-Step Policy Improvement p. 295
- Exercises p. 300
- Bibliographic Notes p. 304
- References p. 305
- 8 Advanced Renewal Theory p. 307
- 8.0 Introduction p. 307
- 8.1 The Renewal Function p. 307
- 8.1.1 The Renewal Equation p. 308
- 8.1.2 Computation of the Renewal Function p. 310
- 8.2 Asymptotic Expansions p. 313
- 8.3 Alternating Renewal Processes p. 321
- 8.4 Ruin Probabilities p. 326
- Exercises p. 334
- Bibliographic Notes p. 337
- References p. 338
- 9 Algorithmic Analysis of Queueing Models p. 339
- 9.0 Introduction p. 339
- 9.1 Basic Concepts p. 341
- 9.2 The M/G/1 Queue p. 345
- 9.2.1 The State Probabilities p. 346
- 9.2.2 The Waiting-Time Probabilities p. 349
- 9.2.3 Busy Period Analysis p. 353
- 9.2.4 Work in System p. 358
- 9.3 The M^X/G/1 Queue p. 360
- 9.3.1 The State Probabilities p. 361
- 9.3.2 The Waiting-Time Probabilities p. 363
- 9.4 M/G/1 Queues with Bounded Waiting Times p. 366
- 9.4.1 The Finite-Buffer M/G/1 Queue p. 366
- 9.4.2 An M/G/1 Queue with Impatient Customers p. 369
- 9.5 The GI/G/1 Queue p. 371
- 9.5.1 Generalized Erlangian Services p. 371
- 9.5.2 Coxian-2 Services p. 372
- 9.5.3 The GI/Ph/1 Queue p. 373
- 9.5.4 The Ph/G/1 Queue p. 374
- 9.5.5 Two-moment Approximations p. 375

- 9.6 Multi-Server Queues with Poisson Input p. 377
- 9.6.1 The M/D/c Queue p. 378
- 9.6.2 The M/G/c Queue p. 384
- 9.6.3 The M^[superscript X]/G/c Queue p. 392
- 9.7 The GI/G/c Queue p. 398
- 9.7.1 The GI/M/c Queue p. 400
- 9.7.2 The GI/D/c Queue p. 406
- 9.8 Finite-Capacity Queues p. 408
- 9.8.1 The M/G/c/c + N Queue p. 408
- 9.8.2 A Basic Relation for the Rejection Probability p. 410
- 9.8.3 The M^[superscript X]/G/c/c + N Queue with Batch Arrivals p. 413
- 9.8.4 Discrete-Time Queueing Systems p. 417
- Exercises p. 420
- Bibliographic Notes p. 428
- References p. 428
- Appendices p. 431
- Appendix A Useful Tools in Applied Probability p. 431
- Appendix B Useful Probability Distributions p. 440
- Appendix C Generating Functions p. 449
- Appendix D The Discrete Fast Fourier Transform p. 455
- Appendix E Laplace Transform Theory p. 458
- Appendix F Numerical Laplace Inversion p. 462
- Appendix G The Root-Finding Problem p. 470
