

Table of contents provided by Syndetics

- **Introduction**
- **Theories of Stress and Strain**
- **Linear Stress-Strain-Temperature Relations**
- **Inelastic Material Behavior**
- **Applications of Energy Methods**
- **Torsion**
- **Bending of Straight Beams**
- **Shear Center for Thin-Wall Beam Cross Sections**
- **Curved Beams**
- **Beams of Elastic Foundations**
- **The Thick-Wall Cylinder**
- **Elastic and Inelastic Stability of Columns**
- **Flat Plates**
- **Stress Concentrations**
- **Fracture Mechanics**
- **Fatigue: Progressive Fracture**
- **Contact Stresses**
- **Creep: Time-Dependent Deformation**
- **Appendix A Average Mechanical Properties of Selected Materials**
- **Appendix B Second Moment (Moment of Inertia) of a Plane Area**
- **Appendix C Properties of Steel Cross Sections**
- **Author Index**
- **Subject Index**
