

- Preface to Dover Edition
- Preface to Revised Edition
- Preface to Second Edition
- Preface to First Edition
- List of Principal Symbols
- Table of Important Constants
- 1 Properties of Ionizing Solvents
- 2 Basic concepts and Definitions
- 3 The State of the Solute in Electrolyte Solutions
- 4 Ionic Distribution Functions and the Potential
- 5 The Measurement of Conductivities and Transport Numbers
- 6 The Limiting Mobilities of Ions
- 7 The Variation of Conductivities and Transport Numbers with Concentration
- 8 The Measurement of Chemical Potential
- 9 The Theoretical Interpretation of Chemical Potentials
- 10 The Measurement of Diffusion Coefficients
- 11 The Theory of Diffusion of Electrolytes; Conductance and Diffusion in relation to Viscosity in concentrated solutions
- 12 Weak electrolytes
- 13 The 'Strong' Acids
- 14 Ion Association
- 15 The Thermodynamics of Mixed Electrolytes
- Appendices
- Addendum
- Index
- List of Appendices
- 1.1 And 1.2 Physical Properties of Water and other Solvents
- 2.1 Relation between Activities and Mean Activity coefficients
- 2.2 The function $\sigma(x)$
- 2.3 The function ϕ° for 2:1 and 1:2 Electrolytes
- 3.1 Table of Ionic Radii
- 5.1 Specific Conductivities of Potassium Chloride Solutions
- 6.1 Limiting Equivalent Conductivities at 25° in Water
- 6.2 Limiting Equivalent Conductivities of Ions in Water at Various Temperatures
- 6.3 Equivalent Conductivity of Typical electrolytes up to high concentrations in Aqueous Solution at 25°
- 7.1 Values of Parameters in Debye-Hückel-Onsager Equations for Aqueous 1:1 Electrolytes
- 8.1 Values of $k = 2 * 3026RT/F$ and RT/F superscript 2
- 8.2 Standard Potentials of Cells (Molality Scale)
- 8.3 Water Activities, Molal Osmotic Coefficients, Molal Activity Coefficients, and Relative Molal Vapour Pressure Lowerings of Sodium and Potassium Chloride Solutions at 25°
- 8.4 Water Activities, Molal Osmotic Coefficients, and Molal Activity Coefficients of Sulphuric Acid solutions at 25°

- 8.5 Water Activities, Molal Osmotic Coefficients and Molal Activity Coefficients of Calcium Chloride solutions at 25°
- 8.6 Water Activities, Molal Osmotic Coefficients and Molal Activity Coefficients of Sucrose Solutions at 25°
- 8.7 Molal Activity Coefficients at the Temperature of the Freezing-point of the solution
- 8.8 Molal Osmotic and Activity Coefficients of Sodium Chloride and Potassium Bromide Between 60° and 100° from Measurement of the Boiling-point Elevation
- 8.9 Molal Osmotic and Activity coefficients of Electrolytes at Concentrations up to 0 * 1 M and at temperatures other than the freezing-point
- 8.10 Molal Osmotic Coefficients of Electrolytes at 25°
 - 1:1 Electrolytes
 - 2:1 Electrolytes
 - 1:2 Electrolytes
 - 2:2 and 3:1 Electrolytes
 - Higher Valency Types
 - Mean Molal Activity Coefficients of Electrolytes at 25°
 - 1:1 Electrolytes
 - 2:1 Electrolytes
 - 1:2 Electrolytes
 - 2:2 and 3:1 Electrolytes
 - Higher Valency Types
 - Osmotic and Activity Coefficients at Higher Concentrations at 25°
 - Some recent Osmotic and Activity Coefficient Data at 25°
- 8.11 Concentrations of Solutions giving Specified Water Activities at 25°; Water Activities of Saturated Solutions at 25°
- 10.1 Values of the Function $e^{\sum z^2}$ at Round Values of $f(z)$
- 10.2 Airy Integral Refinement of the 'Quarter-wave' Approximation for the interference Conditions
- 11.1 Diffusion Coefficients of Dilute Aqueous Electrolyte solutions
- 11.2 Diffusion Coefficients of Concentrated Aqueous Electrolyte Solutions at 25°
- 11.3 Individual Ionic Values of the Coefficient A_2 in Viscosity Equation
- 12.1 Molality-scale Ionization constants (as pK_a Values) of Weak electrolytes, and their Temperature-Variation
- 12.2 Ionization Constants of Water
- 12.3 pH of Solutions
- 14.1 Values of the Definite Integral $Q(b)$ in Equation
- 14.2 Limiting Equivalent Conductivities and Dissociation constants of some Salts in Organic Solvents at 25°
- 14.3 Dissociation Constants of Ion-pairs on Fuoss' Theory
