

- Preface to the Third English Edition page p. x
- Preface to the First English Edition p. xi
- Preface to the German Edition p. xii
- Notation p. xiv
- Chapter I Introduction p. 1
- 1 Examples and Classification of PDE's p. 2
- Examples p. 2
- Classification of PDE's p. 8
- Well-posed Problems p. 9
- Problems p. 10
- 2 The Maximum Principle p. 12
- Examples p. 13
- Corollaries p. 14
- Problem p. 15
- 3 Finite Difference Methods p. 16
- Discretization p. 16
- Discrete maximum principle p. 19
- Problem p. 21
- 4 A Convergence Theory for Difference Methods p. 22
- Consistency p. 22
- Local and global error p. 22
- Limits of the convergence theory p. 24
- Problems p. 26
- Chapter II Conforming Finite Elements p. 27
- 1 Sobolev Spaces p. 28
- Introduction to Sobolev spaces p. 29
- Friedrichs' inequality p. 30
- Possible singularities of H^1 functions p. 31
- Compact imbeddings p. 32
- Problems p. 33
- 2 Variational Formulation of Elliptic Boundary-Value Problems of Second Order p. 34
- Variational formulation p. 35
- Reduction to homogeneous boundary conditions p. 36
- Existence of solutions p. 38
- Inhomogeneous boundary conditions p. 42
- Problems p. 42
- 3 The Neumann Boundary-Value Problem. A Trace Theorem p. 44
- Ellipticity in H^1 p. 44
- Boundary-value problems with natural boundary conditions p. 45
- Neumann boundary conditions p. 46
- Mixed boundary conditions p. 47
- Proof of the trace theorem p. 48
- Practical consequences of the trace theorem p. 50
- Problems p. 52
- 4 The Ritz-Galerkin Method and Some Finite Elements p. 53
- Model Problem p. 56

- Problems p. 58
- 5 Some Standard Finite Elements p. 60
- Requirements on the meshes p. 61
- Significance of the differentiability properties p. 62
- Triangular elements with complete polynomials p. 64
- Remarks on C^1 elements p. 67
- Bilinear elements p. 68
- Quadratic rectangular elements p. 69
- Affine families p. 70
- Choice of an element p. 74
- Problems p. 74
- 6 Approximation Properties p. 76
- The Bramble-Hilbert lemma p. 77
- Triangular elements with complete polynomials p. 78
- Bilinear quadrilateral elements p. 81
- Inverse estimates p. 83
- Clément's interpolation p. 84
- Appendix: On the optimality of the estimates p. 85
- Problems p. 87
- 7 Error Bounds for Elliptic Problems of Second Order p. 89
- Remarks on regularity p. 89
- Error bounds in the energy norm p. 90
- L^2 estimates p. 91
- A simple L^∞ estimate p. 93
- The L^2 -projector p. 94
- Problems p. 95
- 8 Computational Considerations p. 97
- Assembling the stiffness matrix p. 97
- Static condensation p. 99
- Complexity of setting up the matrix p. 100
- Effect on the choice of a grid p. 100
- Local mesh refinement p. 100
- Implementation of the Neumann boundary-value Problem p. 102
- Problems p. 103
- Chapter III Nonconforming and Other Methods p. 105
- 1 Abstract Lemmas and a Simple Boundary Approximation p. 106
- Generalizations of Céa's lemma p. 106
- Duality methods p. 108
- The Crouzeix-Raviart element p. 109
- A Simple approximation to curved boundaries p. 112
- Modifications of the duality argument p. 114
- Problems p. 116
- 2 Isoparametric Elements p. 117
- Isoparametric triangular elements p. 117
- Isoparametric quadrilateral elements p. 119
- Problems p. 121

- 3 Further Tools from Functional Analysis p. 122
- Negative norms p. 122
- Adjoint operators p. 124
- An abstract existence theorem p. 124
- An abstract convergence theorem p. 126
- Proof of Theorem 3.4 p. 127
- Problems p. 128
- 4 Saddle Point Problems p. 129
- Saddle points and minima p. 129
- The inf-sup condition p. 130
- Mixed finite element methods p. 134
- Fortin interpolation p. 136
- Saddle point problems with penalty term p. 138
- Typical applications p. 141
- Problems p. 142
- 5 Mixed Methods for the Poisson Equation p. 145
- The Poisson equation as a mixed problem p. 145
- The Raviart - Thomas element p. 148
- Interpolation by Raviart-Thomas elements p. 149
- Implementation and postprocessing p. 152
- Mesh-dependent norms for the Raviart-Thomas element p. 153
- The Softening behaviour of mixed methods p. 154
- Problems p. 156
- 6 The Stokes Equation p. 157
- Variational formulation p. 158
- The inf-sup condition p. 159
- Nearly incompressible flows p. 161
- Problems p. 161
- 7 Finite Elements for the Stokes Problems p. 162
- An instable element p. 162
- The Taylor-Hood element p. 167
- The MINI element p. 168
- The divergence-free nonconforming P1 element p. 170
- Problems p. 171
- 8 A Posteriori Error Estimates p. 172
- Residual estimators p. 174
- Lower estimates p. 176
- Remark on other estimators p. 179
- Local mesh refinement and convergence p. 179
- 9 A Posteriori Error Estimates via the Hypercircle Method p. 181
- Chapter IV The Conjugate Gradient Method p. 186
- 1 Classical Iterative Methods for Solving Linear Systems p. 187
- Stationary linear processes p. 187
- The Jacobi and Gauss-Seidel methods p. 189
- The model problem p. 192
- Overrelaxation p. 193

- Problems p. 195
- 2 Gradient Methods p. 196
 - The general gradient method p. 196
 - Gradient methods and quadratic functions p. 197
 - Convergence behavior in the case of large condition numbers p. 199
 - Problems p. 200
- 3 Conjugate Gradient and the Minimal Residual Method p. 201
 - The CG algorithm p. 203
 - Analysis of the CG method as an optimal method p. 196
 - The minimal residual method p. 207
 - Indefinite and unsymmetric matrices p. 208
 - Problems p. 209
- 4 Preconditioning p. 210
 - Preconditioning by SSOR p. 213
 - Preconditioning by ILU p. 214
 - Remarks on parallelization p. 216
 - Nonlinear Problems p. 217
 - Problems p. 218
- 5 Saddle Point Problems p. 221
 - The Uzawa algorithm and its variants p. 221
 - An alternative p. 223
 - Problems p. 224
- Chapter V Multigrid Methods p. 225
 - 1 Multigrid Methods for Variational Problems p. 226
 - Smoothing properties of classical iterative methods p. 226
 - The multigrid idea p. 227
 - The algorithm p. 228
 - Transfer between grids p. 232
 - Problems p. 235
 - 2 Convergence of Multigrid Methods p. 237
 - Discrete norms p. 238
 - Connection with the Sobolev norm p. 240
 - Approximation property p. 242
 - Convergence proof for the two-grid method p. 244
 - An alternative short proof p. 245
 - Some variants p. 245
 - Problems p. 246
 - 3 Convergence for Several Levels p. 248
 - A recurrence formula for the W-cycle p. 248
 - An improvement for the energy norm p. 249
 - The convergence proof for the V-cycle p. 251
 - Problems p. 254
 - 4 Nested Iteration p. 255
 - Computation of starting values p. 255
 - Complexity p. 257
 - Multigrid methods with a small number of levels p. 258

- The CASCADE algorithm p. 259
- Problems p. 260
- 5 Multigrid Analysis via Space Decomposition p. 261
- Schwarz alternating method p. 262
- Assumptions p. 265
- Direct consequences p. 266
- Convergence of multiplicative methods p. 267
- Verification of A1 p. 269
- Local mesh refinements p. 270
- Problems p. 271
- 6 Nonlinear Problems p. 272
- The multigrid-Newton method p. 273
- The nonlinear multigrid method p. 274
- Starting values p. 276
- Problems p. 277
- Chapter VI Finite Elements in Solid Mechanics p. 278
- 1 Introduction to Elasticity Theory p. 279
- Kinematics p. 279
- The equilibrium equations p. 281
- The Piola transform p. 283
- Constitutive Equations p. 284
- Linear material laws p. 288
- 2 Hyperelastic Materials p. 290
- 3 Linear Elasticity Theory p. 293
- The variational problem p. 293
- The displacement formulation p. 297
- The mixed method of Hellinger and Reissner p. 300
- The mixed method of Hu and Washizu p. 302
- Nearly incompressible material p. 304
- Locking p. 308
- Locking of the Timoshenko beam and typical remedies p. 310
- Problems p. 314
- 4 Membranes p. 315
- Plane stress states p. 315
- Plane strain states p. 316
- Membrane elements p. 316
- The PEERS element p. 317
- Problems p. 320
- 5 Beams and Plates: The Kirchhoff Plate p. 323
- The hypotheses p. 323
- Note on beam models p. 326
- Mixed methods for the Kirchhoff plate p. 326
- DKT elements p. 328
- Problems p. 334
- 6 The Mindlin-Reissner Plate p. 335
- The Helmholtz decomposition p. 336

- The mixed formulation with the Helmholtz decomposition p. 338
- MITC elements p. 339
- The Model without a Helmholtz decomposition p. 343
- Problems p. 346
- References p. 348
- Index p. 361
