

- **Preface**
- **The way things were: the discovery of experimental 'allergic' neuritis**
- **Part I Biology and Epidemiology**
- **1 Immune interactions in the peripheral nervous system**
- **2 Epidemiology of autoimmune polyneuropathies**
- **Part II Patient Evaluation**
- **3 Clinical evaluation and differential diagnosis**
- **4 Electrophysiological studies**
- **5 Immunopathological studies in immune-mediated neuropathies**
- **Part III Clinical Syndromes**
- **6 Guillain-Barre syndrome and variants**
- **7 Chronic inflammatory demyelinating polyneuropathy**
- **8 Acute and chronic sensory neuronopathy**
- **9 Acute and chronic autonomic neuropathies**
- **10 Vasculitic neuropathies**
- **11 Neuropathies associated with anti-MAG antibodies and IgM monoclonal gammopathies**
- **12 Motor neuropathies associated with anti-GM1 ganglioside antibodies**
- **13 Neuropathies associated with anti-sulfatide and other glycoconjugate antibodies**
- **14 Paraneoplastic peripheral neuropathy**
- **15 Polyneuropathies associated with myeloma, POEMS, and non-malignant IgG and IgA monoclonal gammopathies**
- **16 Neuromyotonia and the Lambert-Eaton myasthenic syndrome**
- **17 The Post-Polio syndrome**
- **18 Peripheral neuropathy in HIV-1 infection**
- **19 Lyme neuropathy**
- **20 Neuropathy in leprosy**
- **21 Neuropathies associated with herpes virus infections Israel Steiner**
- **22 Toxin-induced immune neuropathies**
- **23 Immune-mediated experimental neuropathies**
- **Part IV Therapy and Management**
- **24 Immunosuppression and immunomodulation**
- **25 Management of paralytic neuropathy in the intensive care unit**
- **26 Diagnosis and symptomatic therapy of nerve pain Ch**
- **27 Medical rehabilitation**
