

- Preface p. xxi
- Part 1 Preliminaries
- 1 Introduction p. 3
- 1.1 General p. 3
- 1.2 One-Dimensional Computations by Finite Difference Methods p. 6
- 1.3 One-Dimensional Computations by Finite Element Methods p. 7
- 1.4 One-Dimensional Computations by Finite Volume Methods p. 11
- 1.5 Neumann Boundary Conditions p. 13
- 1.6 Example Problems p. 17
- 1.7 Summary p. 24
- References p. 26
- 2 Governing Equations p. 29
- 2.1 Classification of Partial Differential Equations p. 29
- 2.2 Navier-Stokes System of Equations p. 33
- 2.3 Boundary Conditions p. 38
- 2.4 Summary p. 41
- References p. 42
- Part 2 Finite Difference Methods
- 3 Derivation of Finite Difference Equations p. 45
- 3.1 Simple Methods p. 45
- 3.2 General Methods p. 46
- 3.3 Higher Order Derivatives p. 50
- 3.4 Multidimensional Finite Difference Formulas p. 53
- 3.5 Mixed Derivatives p. 57
- 3.6 Nonuniform Mesh p. 59
- 3.7 Higher Order Accuracy Schemes p. 60
- 3.8 Accuracy of Finite Difference Solutions p. 61
- 3.9 Summary p. 62
- References p. 62
- 4 Solution Methods of Finite Difference Equations p. 63
- 4.1 Elliptic Equations p. 63
- 4.2 Parabolic Equations p. 67
- 4.3 Hyperbolic Equations p. 77
- 4.4 Burgers' Equation p. 87
- 4.5 Algebraic Equation Solvers and Sources of Errors p. 91
- 4.6 Coordinate Transformation for Arbitrary Geometries p. 94
- 4.7 Example Problems p. 98
- 4.8 Summary p. 105
- References p. 105
- 5 Incompressible Viscous Flows via Finite Difference Methods p. 106
- 5.1 General p. 106
- 5.2 Artificial Compressibility Method p. 107
- 5.3 Pressure Correction Methods p. 108
- 5.4 Vortex Methods p. 115

- 5.5 Summary p. 118
- References p. 119
- 6 Compressible Flows via Finite Difference Methods p. 120
- 6.1 Potential Equation p. 121
- 6.2 Euler Equations p. 129
- 6.3 Navier-Stokes System of Equations p. 166
- 6.4 Preconditioning Process for Compressible and Incompressible Flows p. 178
- 6.5 Flowfield-Dependent Variation Methods p. 180
- 6.6 Other Methods p. 195
- 6.7 Boundary Conditions p. 197
- 6.8 Example Problems p. 207
- 6.9 Summary p. 213
- References p. 214
- 7 Finite Volume Methods via Finite Difference Methods p. 218
- 7.1 General p. 218
- 7.2 Two-Dimensional Problems p. 219
- 7.3 Three-Dimensional Problems p. 227
- 7.4 FVM-FDV Formulation p. 234
- 7.5 Example Problems p. 239
- 7.6 Summary p. 239
- References p. 239
- Part 3 Finite Element Methods
- 8 Introduction to Finite Element Methods p. 243
- 8.1 General p. 243
- 8.2 Finite Element Formulations p. 245
- 8.3 Definitions of Errors p. 254
- 8.4 Summary p. 259
- References p. 260
- 9 Finite Element Interpolation Functions p. 262
- 9.1 General p. 262
- 9.2 One-Dimensional Elements p. 264
- 9.3 Two-Dimensional Elements p. 273
- 9.4 Three-Dimensional Elements p. 298
- 9.5 Axisymmetric Ring Elements p. 305
- 9.6 Lagrange and Hermite Families and Convergence Criteria p. 306
- 9.7 Summary p. 308
- References p. 308
- 10 Linear Problems p. 309
- 10.1 Steady-State Problems--Standard Galerkin Methods p. 309
- 10.2 Transient Problems--Generalized Galerkin Methods p. 327
- 10.3 Solutions of Finite Element Equations p. 337
- 10.4 Example Problems p. 342
- 10.5 Summary p. 346
- References p. 346

- 11 Nonlinear Problems/Convection-Dominated Flows p. 347
- 11.1 Boundary and Initial Conditions p. 347
- 11.2 Generalized Galerkin Methods and Taylor-Galerkin Methods p. 355
- 11.3 Numerical Diffusion Test Functions p. 367
- 11.4 Generalized Petrov-Galerkin (GPG) Methods p. 377
- 11.5 Solutions of Nonlinear and Time-Dependent Equations and Element-by-Element Approach p. 380
- 11.6 Example Problems p. 391
- 11.7 Summary p. 396
- References p. 396
- 12 Incompressible Viscous Flows via Finite Element Methods p. 399
- 12.1 Primitive Variable Methods p. 399
- 12.2 Vortex Methods p. 406
- 12.3 Example Problems p. 413
- 12.4 Summary p. 416
- References p. 416
- 13 Compressible Flows via Finite Element Methods p. 418
- 13.1 Governing Equations p. 418
- 13.2 Taylor-Galerkin Methods and Generalized Galerkin Methods p. 422
- 13.3 Generalized Petrov-Galerkin Methods p. 428
- 13.4 Characteristic Galerkin Methods p. 435
- 13.5 Discontinuous Galerkin Methods or Combined FEM/FDM/FVM Methods p. 438
- 13.6 Flowfield-Dependent Variation Methods p. 440
- 13.7 Example Problems p. 452
- 13.8 Summary p. 459
- References p. 460
- 14 Miscellaneous Weighted Residual Methods p. 462
- 14.1 Spectral Element Methods p. 462
- 14.2 Least Squares Methods p. 478
- 14.3 Finite Point Method (FPM) p. 481
- 14.4 Example Problems p. 483
- 14.5 Summary p. 489
- References p. 489
- 15 Finite Volume Methods via Finite Element Methods p. 491
- 15.1 General p. 491
- 15.2 Formulations of Finite Volume Equations p. 492
- 15.3 Example Problems p. 503
- 15.4 Summary p. 507
- References p. 508
- 16 Relationships between Finite Differences and Finite Elements and Other Methods p. 509
- 16.1 Simple Comparisons between FDM and FEM p. 510
- 16.2 Relationships between FDM and FDV p. 514
- 16.3 Relationships between FEM and FDV p. 518
- 16.4 Other Methods p. 522

- 16.5 Summary p. 530
- References p. 530
- Part 4 Automatic Grid Generation, Adaptive Methods, and Computing Techniques
- 17 Structured Grid Generation p. 533
- 17.1 Algebraic Methods p. 533
- 17.2 PDE Mapping Methods p. 551
- 17.3 Surface Grid Generation p. 562
- 17.4 Multiblock Structured Grid Generation p. 577
- 17.5 Summary p. 580
- References p. 580
- 18 Unstructured Grid Generation p. 581
- 18.1 Delaunay-Voronoi Methods p. 581
- 18.2 Advancing Front Methods p. 591
- 18.3 Combined DVM and AFM p. 596
- 18.4 Three-Dimensional Applications p. 597
- 18.5 Other Approaches p. 600
- 18.6 Summary p. 605
- References p. 605
- 19 Adaptive Methods p. 607
- 19.1 Structured Adaptive Methods p. 607
- 19.2 Unstructured Adaptive Methods p. 617
- 19.3 Summary p. 642
- References p. 642
- 20 Computing Techniques p. 644
- 20.1 Domain Decomposition Methods p. 644
- 20.2 Multigrid Methods p. 651
- 20.3 Parallel Processing p. 656
- 20.4 Example Problems p. 666
- 20.5 Summary p. 673
- References p. 674
- Part 5 Applications
- 21 Applications to Turbulence p. 679
- 21.1 General p. 679
- 21.2 Governing Equations p. 680
- 21.3 Turbulence Models p. 683
- 21.4 Large Eddy Simulation p. 696
- 21.5 Direct Numerical Simulation p. 703
- 21.6 Solution Methods and Initial and Boundary Conditions p. 705
- 21.7 Applications p. 706
- 21.8 Summary p. 718
- References p. 721
- 22 Applications to Chemically Reactive Flows and Combustion p. 724
- 22.1 General p. 724
- 22.2 Governing Equations in Reactive Flows p. 725

- 22.3 Chemical Equilibrium Computations p. 740
- 22.4 Chemistry-Turbulence Interaction Models p. 745
- 22.5 Hypersonic Reactive Flows p. 756
- 22.6 Example Problems p. 765
- 22.7 Summary p. 792
- References p. 792
- 23 Applications to Acoustics p. 796
- 23.1 Introduction p. 796
- 23.2 Pressure Mode Acoustics p. 798
- 23.3 Vorticity Mode Acoustics p. 801
- 23.4 Entropy Mode Acoustics p. 803
- 23.5 Example Problems p. 808
- 23.6 Summary p. 837
- References p. 838
- 24 Applications to Combined Mode Radiative Heat Transfer p. 841
- 24.1 General p. 841
- 24.2 Radiative Heat Transfer in Nonparticipating Media p. 845
- 24.3 Radiative Heat Transfer in Participating Media p. 864
- 24.4 Example Problems p. 886
- 24.5 Summary p. 900
- References p. 901
- 25 Applications to Multiphase Flows p. 902
- 25.1 General p. 902
- 25.2 Volume of Fluid Formulation with Continuum Surface Force p. 904
- 25.3 Fluid-Particle Mixture Flows p. 913
- 25.4 Example Problems p. 920
- 25.5 Summary p. 924
- References p. 924
- 26 Applications to Electromagnetic Flows p. 927
- 26.1 Magnetohydrodynamics p. 927
- 26.2 Rarefied Gas Dynamics p. 931
- 26.3 Semiconductor Plasma Processing p. 936
- 26.4 Applications p. 946
- 26.5 Summary p. 951
- References p. 953
- 27 Applications to Relativistic Astrophysical Flows p. 955
- 27.1 General p. 955
- 27.2 Governing Equations in Relativistic Fluid Dynamics p. 956
- 27.3 Example Problems p. 964
- 27.4 Summary p. 973
- References p. 974
- Appendixes
- Appendix A Three-Dimensional Flux Jacobians p. 979
- Appendix B Gaussian Quadrature p. 985

- Appendix C Two Phase Flow - Source Term Jacobians for Surface Tension p. 993
- Appendix D Relativistic Astrophysical Flow Metrics, Christoffel Symbols, and FDV Flux and Source Term Jacobians p. 999
- Index p. 1007
