

- 1 Introduction p. 1
- 2 Some elements of vector analysis p. 7
- 2.1 Simple numerical vectors p. 7
- 2.2 Vector fields p. 12
- 2.3 Vector operators p. 13
- 2.4 The three major coordinate systems p. 13
- 2.5 Some vector identities p. 17
- 2.6 General orthogonal coordinate systems p. 20
- 2.7 Transformations between coordinate systems p. 27
- 3 The electrostatic field p. 33
- 3.1 Introduction p. 33
- 3.2 The electrostatic field p. 35
- 3.3 Volume-, surface-, and line-charge densities p. 37
- 3.4 Gauss's law for the electric field in free space p. 43
- 3.5 Electrostatic field lines p. 50
- 3.6 Line integrals in vector fields p. 53
- 3.7 The gradient of a scalar field p. 56
- 4 The electrostatic potential p. 62
- 4.1 Definition p. 62
- 4.2 Potentials for elementary charge distributions p. 65
- 4.3 Potential and field of an elementary dipole p. 67
- 5 The transition towards Maxwell's equations for electrostatics p. 75
- 5.1 Introduction p. 75
- 5.2 The divergence of a vector field and Gauss's divergence theorem p. 75
- 5.3 The curl of a vector field; Stokes's theorem p. 80
- 5.4 Irrotational (conservative) and solenoidal fields p. 83
- 5.5 Maxwell's equations for electrostatic fields p. 85
- 6 Electrostatic fields in material media p. 90
- 6.1 Introduction p. 90
- 6.2 Metallic conductors p. 92
- 6.3 Induced charge separation in conductors p. 94
- 6.4 Dielectric materials p. 98
- 7 Electrostatic energy, electromechanical force, and capacitance p. 118
- 7.1 N point charges p. 118
- 7.2 Continuous charge distribution p. 120
- 7.3 Stored energy in terms of the fields p. 122
- 7.4 Extraction of energy by means of the field forces p. 124
- 7.5 Capacitance--definition p. 126
- 7.6 Capacitance, stored energy, and forces p. 133
- 7.7 Capacitance of a system of many conductors p. 134
- 8 The Laplace and Poisson equations of electrostatics p. 138
- 8.1 The general equation for electrostatic potential p. 138
- 8.2 Laplace and Poisson equations for uniform-permittivity regions p. 142
- 8.3 The method of images p. 144
- 8.4 Some simple Poisson-equation situations p. 150
- 8.5 Separation of variables p. 158

- 9 Numerical solutions of Laplace and Poisson equations p. 173
- 9.1 General potential equation in Cartesian coordinates p. 173
- 9.2 Methods of solution for the potential p. 177
- 10 Electric current p. 190
- 10.1 Concept of current density p. 190
- 10.2 Various types of current p. 193
- 10.3 Power and conservation of current p. 197
- 10.4 Boundary conditions and consequences for lossy dielectrics p. 201
- 10.5 Relationship between resistance and capacitance p. 203
- 11 The magnetostatic field p. 206
- 11.1 Magnetostatic forces, fields, and the law of Biot and Savart p. 206
- 11.2 Basics of Maxwell's laws for magnetostatic fields p. 214
- 11.3 Ampere's law and applications p. 218
- 11.4 The finite solenoid p. 223
- 11.5 The boundary conditions for B and H p. 227
- 12 The magnetostatic potentials p. 230
- 12.1 The scalar magnetic potential p. 230
- 12.2 The vector magnetic potential p. 234
- 12.3 Potential and field of an elementary magnetic dipole p. 238
- 13 Inductance and magnetic stored energy p. 244
- 13.1 Mutual and self inductance p. 244
- 13.2 Inductance due to internal and external flux linkage p. 248
- 13.3 Magnetostatic stored energy p. 255
- 13.4 Inductance, stored energy, and forces p. 258
- 13.5 Internal inductance and equation (13.11) p. 262
- 14 Magnetostatic fields in material media p. 265
- 14.1 Force and torque upon a current loop p. 265
- 14.2 Magnetization and magnetic permeability p. 271
- 14.3 Magnetic materials p. 276
- 14.4 Some vacuum-ferromagnet interface consequences p. 285
- 14.5 Some details on diamagnetics and paramagnetics p. 287
- 15 Extension to electrodynamics p. 295
- 15.1 Faraday's law--introduction p. 296
- 15.2 Maxwell's displacement current p. 306
- 15.3 The Maxwell equations p. 307
- 16 How Maxwell's equations lead to waves and signals p. 312
- 16.1 Some forms for the constitutive equations p. 312
- 16.2 The gauge equations for the potentials p. 313
- 16.3 Signals propagating at finite velocities p. 315
- 16.4 Frequency, wavelength, and all that p. 319
- 16.5 Plane waves--introduction p. 320
- 16.6 Use of phasors p. 321
- 16.7 Time-harmonic fields p. 324
- 17 Important features of plane time-harmonic waves p. 331
- 17.1 Phase and group velocities p. 331
- 17.2 Plane waves in lossy media p. 336

- 17.3 Polarization p. 340
- 17.4 Power flow; Poynting vector p. 345
- 18 Reflection and transmission of plane waves p. 352
- 18.1 Normal incidence upon a perfect conductor p. 353
- 18.2 Oblique incidence upon a perfect conductor p. 355
- 18.3 Normal incidence upon a dielectric half-space p. 361
- 18.4 Oblique incidence upon a dielectric half-space p. 365
- 18.5 Critical and Brewster angles, refractive phenomena p. 370
- 18.6 Optical filters; dielectric stacks p. 377
- 19 Waveguides p. 386
- 19.1 The waveguide equations p. 387
- 19.2 Classification of modes for two-dimensional waveguides p. 390
- 19.3 TEM modes in two-dimensional planar geometry p. 395
- 19.4 TM modes in two-dimensional planar geometry p. 395
- 19.5 TE modes in two-dimensional planar geometry p. 397
- 19.6 Rectangular waveguides p. 398
- 19.7 Cylindrical waveguides p. 402
- 20 Transmission lines p. 409
- 20.1 The TEM mode of a two-dimensional waveguide as transmission line p. 410
- 20.2 Extension to lossy infinite transmission lines p. 416
- 20.3 Finite-length transmission lines p. 423
- 20.4 Measurement of transmission-line parameters p. 432
- 20.5 The Smith Chart p. 437
- 20.6 Some impedance-matching techniques p. 445
- 20.7 General lossless-transmission-line equations and transients p. 451
- 20.8 Reasons for considering TE, TM modes p. 455
- 21 Selected topics in radiation and antennas p. 459
- 21.1 Time-harmonic radiation by an infinitesimal source p. 459
- 21.2 The time-harmonic infinitesimal electric-dipole source p. 464
- 21.3 The time-harmonic infinitesimal magnetic-dipole source p. 465
- 21.4 A linear current source of nonzero length; antenna parameters p. 468
- 21.5 An array of linear current sources p. 472
- 21.6 Receiving antennas and radar equation p. 473
- 21.7 Geometrical optics and refraction p. 477
- 21.8 Diffraction p. 481
- Appendices p. 486
- A.1 Some results from calculus p. 486
- A.1.1 Taylor series p. 486
- A.1.2 Multiple integrals p. 487
- A.1.3 Logarithms p. 489
- A.1.4 Binomial theorem p. 490
- A.2 Some elementary facts about complex numbers p. 490
- A.3 Vectors p. 493
- A.3.1 The principal vector operators p. 493
- A.3.2 Useful vector identities p. 494
- A.3.3 Useful vector-operator identities p. 494

- A.4 Some mathematical and physical constants p. 495
- A.5 Various material constants p. 496
- Bibliography p. 498
- Index p. 501
