

- Preface p. xiii
- Preface to the First Edition p. xv
- 1 Introduction and Background p. 1
- 1.1 Description of Fluid Motion p. 1
- 1.2 Choice of Coordinate System p. 2
- 1.3 Pathlines, Streak Lines, and Streamlines p. 3
- 1.4 Forces in a Fluid p. 4
- 1.5 Integral Form of the Fluid Dynamic Equations p. 6
- 1.6 Differential Form of the Fluid Dynamic Equations p. 8
- 1.7 Dimensional Analysis of the Fluid Dynamic Equations p. 14
- 1.8 Flow with High Reynolds Number p. 17
- 1.9 Similarity of Flows p. 19
- 2 Fundamentals of Inviscid, Incompressible Flow p. 21
- 2.1 Angular Velocity, Vorticity, and Circulation p. 21
- 2.2 Rate of Change of Vorticity p. 24
- 2.3 Rate of Change of Circulation: Kelvin's Theorem p. 25
- 2.4 Irrotational Flow and the Velocity Potential p. 26
- 2.5 Boundary and Infinity Conditions p. 27
- 2.6 Bernoulli's Equation for the Pressure p. 28
- 2.7 Simply and Multiply Connected Regions p. 29
- 2.8 Uniqueness of the Solution p. 30
- 2.9 Vortex Quantities p. 32
- 2.10 Two-Dimensional Vortex p. 34
- 2.11 The Biot-Savart Law p. 36
- 2.12 The Velocity Induced by a Straight Vortex Segment p. 38
- 2.13 The Stream Function p. 41
- 3 General Solution of the Incompressible, Potential Flow Equations p. 44
- 3.1 Statement of the Potential Flow Problem p. 44
- 3.2 The General Solution, Based on Green's Identity p. 44
- 3.3 Summary: Methodology of Solution p. 48
- 3.4 Basic Solution: Point Source p. 49
- 3.5 Basic Solution: Point Doublet p. 51
- 3.6 Basic Solution: Polynomials p. 54
- 3.7 Two-Dimensional Version of the Basic Solutions p. 56
- 3.8 Basic Solution: Vortex p. 58
- 3.9 Principle of Superposition p. 60
- 3.10 Superposition of Sources and Free Stream: Rankine's Oval p. 60
- 3.11 Superposition of Doublet and Free Stream: Flow around a Cylinder p. 62
- 3.12 Superposition of a Three-Dimensional Doublet and Free Stream: Flow around a Sphere p. 67
- 3.13 Some Remarks about the Flow over the Cylinder and the Sphere p. 69
- 3.14 Surface Distribution of the Basic Solutions p. 70
- 4 Small-Disturbance Flow over Three-Dimensional Wings: Formulation of the Problem p. 75
- 4.1 Definition of the Problem p. 75

- 4.2 The Boundary Condition on the Wing p. 76
- 4.3 Separation of the Thickness and the Lifting Problems p. 78
- 4.4 Symmetric Wing with Nonzero Thickness at Zero Angle of Attack p. 79
- 4.5 Zero-Thickness Cambered Wing at Angle of Attack-Lifting Surfaces p. 82
- 4.6 The Aerodynamic Loads p. 85
- 4.7 The Vortex Wake p. 88
- 4.8 Linearized Theory of Small-Disturbance Compressible Flow p. 90
- 5 Small-Disturbance Flow over Two-Dimensional Airfoils p. 94
- 5.1 Symmetric Airfoil with Nonzero Thickness at Zero Angle of Attack p. 94
- 5.2 Zero-Thickness Airfoil at Angle of Attack p. 100
- 5.3 Classical Solution of the Lifting Problem p. 104
- 5.4 Aerodynamic Forces and Moments on a Thin Airfoil p. 106
- 5.5 The Lumped-Vortex Element p. 114
- 5.6 Summary and Conclusions from Thin Airfoil Theory p. 120
- 6 Exact Solutions with Complex Variables p. 122
- 6.1 Summary of Complex Variable Theory p. 122
- 6.2 The Complex Potential p. 125
- 6.3 Simple Examples p. 126
- 6.3.1 Uniform Stream and Singular Solutions p. 126
- 6.3.2 Flow in a Corner p. 127
- 6.4 Blasius Formula, Kutta-Joukowski Theorem p. 128
- 6.5 Conformal Mapping and the Joukowski Transformation p. 128
- 6.5.1 Flat Plate Airfoil p. 130
- 6.5.2 Leading-Edge Suction p. 131
- 6.5.3 Flow Normal to a Flat Plate p. 133
- 6.5.4 Circular Arc Airfoil p. 134
- 6.5.5 Symmetric Joukowski Airfoil p. 135
- 6.6 Airfoil with Finite Trailing-Edge Angle p. 137
- 6.7 Summary of Pressure Distributions for Exact Airfoil Solutions p. 138
- 6.8 Method of Images p. 141
- 6.9 Generalized Kutta-Joukowski Theorem p. 146
- 7 Perturbation Methods p. 151
- 7.1 Thin-Airfoil Problem p. 151
- 7.2 Second-Order Solution p. 154
- 7.3 Leading-Edge Solution p. 157
- 7.4 Matched Asymptotic Expansions p. 160
- 7.5 Thin Airfoil between Wind Tunnel Walls p. 163
- 8 Three-Dimensional Small-Disturbance Solutions p. 167
- 8.1 Finite Wing: The Lifting Line Model p. 167
- 8.1.1 Definition of the Problem p. 167
- 8.1.2 The Lifting-Line Model p. 168
- 8.1.3 The Aerodynamic Loads p. 172
- 8.1.4 The Elliptic Lift Distribution p. 173
- 8.1.5 General Spanwise Circulation Distribution p. 178

- 8.1.6 Twisted Elliptic Wing p. 181
- 8.1.7 Conclusions from Lifting-Line Theory p. 183
- 8.2 Slender Wing Theory p. 184
- 8.2.1 Definition of the Problem p. 184
- 8.2.2 Solution of the Flow over Slender Pointed Wings p. 186
- 8.2.3 The Method of R. T. Jones p. 192
- 8.2.4 Conclusions from Slender Wing Theory p. 194
- 8.3 Slender Body Theory p. 195
- 8.3.1 Axisymmetric Longitudinal Flow Past a Slender Body of Revolution p. 196
- 8.3.2 Transverse Flow Past a Slender Body of Revolution p. 198
- 8.3.3 Pressure and Force Information p. 199
- 8.3.4 Conclusions from Slender Body Theory p. 201
- 8.4 Far Field Calculation of Induced Drag p. 201
- 9 Numerical (Panel) Methods p. 206
- 9.1 Basic Formulation p. 206
- 9.2 The Boundary Conditions p. 207
- 9.3 Physical Considerations p. 209
- 9.4 Reduction of the Problem to a Set of Linear Algebraic Equations p. 213
- 9.5 Aerodynamic Loads p. 216
- 9.6 Preliminary Considerations, Prior to Establishing Numerical Solutions p. 217
- 9.7 Steps toward Constructing a Numerical Solution p. 220
- 9.8 Example: Solution of Thin Airfoil with the Lumped-Vortex Element p. 222
- 9.9 Accounting for Effects of Compressibility and Viscosity p. 226
- 10 Singularity Elements and Influence Coefficients p. 230
- 10.1 Two-Dimensional Point Singularity Elements p. 230
- 10.1.1 Two-Dimensional Point Source p. 230
- 10.1.2 Two-Dimensional Point Doublet p. 231
- 10.1.3 Two-Dimensional Point Vortex p. 231
- 10.2 Two-Dimensional Constant-Strength Singularity Elements p. 232
- 10.2.1 Constant-Strength Source Distribution p. 233
- 10.2.2 Constant-Strength Doublet Distribution p. 235
- 10.2.3 Constant-Strength Vortex Distribution p. 236
- 10.3 Two-Dimensional Linear-Strength Singularity Elements p. 237
- 10.3.1 Linear Source Distribution p. 238
- 10.3.2 Linear Doublet Distribution p. 239
- 10.3.3 Linear Vortex Distribution p. 241
- 10.3.4 Quadratic Doublet Distribution p. 242
- 10.4 Three-Dimensional Constant-Strength Singularity Elements p. 244
- 10.4.1 Quadrilateral Source p. 245
- 10.4.2 Quadrilateral Doublet p. 247
- 10.4.3 Constant Doublet Panel Equivalence to Vortex Ring p. 250
- 10.4.4 Comparison of Near and Far Field Formulas p. 251
- 10.4.5 Constant-Strength Vortex Line Segment p. 251
- 10.4.6 Vortex Ring p. 255

- 10.4.7 Horseshoe Vortex p. 256
- 10.5 Three-Dimensional Higher Order Elements p. 258
- 11 Two-Dimensional Numerical Solutions p. 262
- 11.1 Point Singularity Solutions p. 262
- 11.1.1 Discrete Vortex Method p. 263
- 11.1.2 Discrete Source Method p. 272
- 11.2 Constant-Strength Singularity Solutions (Using the Neumann B.C.) p. 276
- 11.2.1 Constant Strength Source Method p. 276
- 11.2.2 Constant-Strength Doublet Method p. 280
- 11.2.3 Constant-Strength Vortex Method p. 284
- 11.3 Constant-Potential (Dirichlet Boundary Condition) Methods p. 288
- 11.3.1 Combined Source and Doublet Method p. 290
- 11.3.2 Constant-Strength Doublet Method p. 294
- 11.4 Linearly Varying Singularity Strength Methods (Using the Neumann B.C.) p. 298
- 11.4.1 Linear-Strength Source Method p. 299
- 11.4.2 Linear-Strength Vortex Method p. 303
- 11.5 Linearly Varying Singularity Strength Methods (Using the Dirichlet B.C.) p. 306
- 11.5.1 Linear Source/Doublet Method p. 306
- 11.5.2 Linear Doublet Method p. 312
- 11.6 Methods Based on Quadratic Doublet Distribution (Using the Dirichlet B.C.) p. 315
- 11.6.1 Linear Source/Quadratic Doublet Method p. 315
- 11.6.2 Quadratic Doublet Method p. 320
- 11.7 Some Conclusions about Panel Methods p. 323
- 12 Three-Dimensional Numerical Solutions p. 331
- 12.1 Lifting-Line Solution by Horseshoe Elements p. 331
- 12.2 Modeling of Symmetry and Reflections from Solid Boundaries p. 338
- 12.3 Lifting-Surface Solution by Vortex Ring Elements p. 340
- 12.4 Introduction to Panel Codes: A Brief History p. 351
- 12.5 First-Order Potential-Based Panel Methods p. 353
- 12.6 Higher Order Panel Methods p. 358
- 12.7 Sample Solutions with Panel Codes p. 360
- 13 Unsteady Incompressible Potential Flow p. 369
- 13.1 Formulation of the Problem and Choice of Coordinates p. 369
- 13.2 Method of Solution p. 373
- 13.3 Additional Physical Considerations p. 375
- 13.4 Computation of Pressures p. 376
- 13.5 Examples for the Unsteady Boundary Condition p. 377
- 13.6 Summary of Solution Methodology p. 380
- 13.7 Sudden Acceleration of a Flat Plate p. 381
- 13.7.1 The Added Mass p. 385
- 13.8 Unsteady Motion of a Two-Dimensional Thin Airfoil p. 387
- 13.8.1 Kinematics p. 388
- 13.8.2 Wake Model p. 389
- 13.8.3 Solution by the Time-Stepping Method p. 391

- 13.8.4 Fluid Dynamic Loads p. 394
- 13.9 Unsteady Motion of a Slender Wing p. 400
- 13.9.1 Kinematics p. 401
- 13.9.2 Solution of the Flow over the Unsteady Slender Wing p. 401
- 13.10 Algorithm for Unsteady Airfoil Using the Lumped-Vortex Element p. 407
- 13.11 Some Remarks about the Unsteady Kutta Condition p. 416
- 13.12 Unsteady Lifting-Surface Solution by Vortex Ring Elements p. 419
- 13.13 Unsteady Panel Methods p. 433
- 14 The Laminar Boundary Layer p. 448
- 14.1 The Concept of the Boundary Layer p. 448
- 14.2 Boundary Layer on a Curved Surface p. 452
- 14.3 Similar Solutions to the Boundary Layer Equations p. 457
- 14.4 The von Karman Integral Momentum Equation p. 463
- 14.5 Solutions Using the von Karman Integral Equation p. 467
- 14.5.1 Approximate Polynomial Solution p. 468
- 14.5.2 The Correlation Method of Thwaites p. 469
- 14.6 Weak Interactions, the Goldstein Singularity, and Wakes p. 471
- 14.7 Two-Equation Integral Boundary Layer Method p. 473
- 14.8 Viscous-Inviscid Interaction Method p. 475
- 14.9 Concluding Example: The Flow over a Symmetric Airfoil p. 479
- 15 Enhancement of the Potential Flow Model p. 483
- 15.1 Wake Rollup p. 483
- 15.2 Coupling between Potential Flow and Boundary Layer Solvers p. 487
- 15.2.1 The Laminar/Turbulent Boundary Layer and Transition p. 487
- 15.2.2 Viscous-Inviscid Coupling, Including Turbulent Boundary Layer p. 491
- 15.3 Influence of Viscous Flow Effects on Airfoil Design p. 495
- 15.3.1 Low Drag Considerations p. 498
- 15.3.2 High Lift Considerations p. 499
- 15.4 Flow over Wings at High Angles of Attack p. 505
- 15.4.1 Flow Separation on Wings with Unswept Leading Edge - Experimental Observations p. 508
- 15.4.2 Flow Separation on Wings with Unswept Leading Edge - Modeling p. 510
- 15.4.3 Flow Separation on Wings with Highly Swept Leading Edge - Experimental Observations p. 516
- 15.4.4 Modeling of Highly Swept Leading-Edge Separation p. 523
- 15.5 Possible Additional Features of Panel Codes p. 528
- A Airfoil Integrals p. 537
- B Singularity Distribution Integrals p. 540
- C Principal Value of the Lifting Surface Integral I_L p. 545
