

- Preface p. xi
- 1 Interpolation p. 1
 - 1.1 Lagrange Polynomial Interpolation p. 1
 - 1.2 Cubic Spline Interpolation p. 4
 - Exercises p. 8
 - Further Reading p. 11
- 2 Numerical Differentiation--Finite Differences p. 12
 - 2.1 Construction of Difference Formulas Using Taylor Series p. 12
 - 2.2 A General Technique for Construction of Finite Difference Schemes p. 14
 - 2.3 An Alternative Measure for the Accuracy of Finite Differences p. 16
 - 2.4 Pade Approximations p. 19
 - 2.5 Non-Uniform Grids p. 22
 - Exercises p. 24
 - Further Reading p. 26
- 3 Numerical Integration p. 27
 - 3.1 Trapezoidal and Simpson's Rules p. 27
 - 3.2 Error Analysis p. 28
 - 3.3 Trapezoidal Rule with End-Correction p. 31
 - 3.4 Romberg Integration and Richardson Extrapolation p. 32
 - 3.5 Adaptive Quadrature p. 34
 - 3.6 Gauss Quadrature p. 37
 - Exercises p. 41
 - Further Reading p. 42
- 4 Numerical Solution of Ordinary Differential Equations p. 43
 - 4.1 Initial Value Problems p. 43
 - 4.2 Numerical Stability p. 45
 - 4.3 Stability Analysis for the Euler Method p. 47
 - 4.4 Implicit or Backward Euler p. 50
 - 4.5 Numerical Accuracy Revisited p. 51
 - 4.6 Trapezoidal Method p. 53
 - 4.7 Linearization for Implicit Methods p. 57
 - 4.8 Runge--Kutta Methods p. 59
 - 4.9 Multi-Step Methods p. 65
 - 4.10 System of First-Order Ordinary Differential Equations p. 69
 - 4.11 Boundary Value Problems p. 73
 - 4.11.1 Shooting Method p. 74
 - 4.11.2 Direct Methods p. 77
 - Exercises p. 79
 - Further Reading p. 92
- 5 Numerical Solution of Partial Differential Equations p. 93
 - 5.1 Semi-Discretization p. 94
 - 5.2 von Neumann Stability Analysis p. 101
 - 5.3 Modified Wavenumber Analysis p. 103
 - 5.4 Implicit Time Advancement p. 108

- 5.5 Accuracy via Modified Equation p. 111
- 5.6 Du Fort--Frankel Method: An Inconsistent Scheme p. 113
- 5.7 Multi-Dimensions p. 116
- 5.8 Implicit Methods in Higher Dimensions p. 118
- 5.9 Approximate Factorization p. 120
- 5.9.1 Stability of the Factored Scheme p. 125
- 5.9.2 Alternating Direction Implicit Methods p. 126
- 5.9.3 Mixed and Fractional Step Methods p. 128
- 5.10 Elliptic Partial Differential Equations p. 129
- 5.10.1 Iterative Solution Methods p. 132
- 5.10.2 The Point Jacobi Method p. 133
- 5.10.3 Gauss--Seidel Method p. 135
- 5.10.4 Successive Over Relaxation Scheme p. 136
- 5.10.5 Multigrid Acceleration p. 139
- Exercises p. 146
- Further Reading p. 156
- 6 Discrete Transform Methods p. 157
- 6.1 Fourier Series p. 157
- 6.1.1 Discrete Fourier Series p. 158
- 6.1.2 Fast Fourier Transform p. 159
- 6.1.3 Fourier Transform of a Real Function p. 160
- 6.1.4 Discrete Fourier Series in Higher Dimensions p. 162
- 6.1.5 Discrete Fourier Transform of a Product of Two Functions p. 163
- 6.1.6 Discrete Sine and Cosine Transforms p. 164
- 6.2 Applications of Discrete Fourier Series p. 166
- 6.2.1 Direct Solution of Finite Differenced Elliptic Equations p. 166
- 6.2.2 Differentiation of a Periodic Function Using Fourier Spectral Method p. 170
- 6.2.3 Numerical Solution of Linear, Constant Coefficient Differential Equations with Periodic Boundary Conditions p. 172
- 6.3 Matrix Operator for Fourier Spectral Numerical Differentiation p. 175
- 6.4 Discrete Chebyshev Transform and Applications p. 178
- 6.4.1 Numerical Differentiation Using Chebyshev Polynomials p. 182
- 6.4.2 Quadrature Using Chebyshev Polynomials p. 185
- 6.4.3 Matrix Form of Chebyshev Collocation Derivative p. 186
- Exercises p. 190
- Further Reading p. 193
- A A Review of Linear Algebra p. 195
- A.1 Vectors, Matrices and Elementary Operations p. 195
- A.2 System of Linear Algebraic Equations p. 198
- A.2.1 Effects of Round-off Error p. 198
- A.3 Operations Counts p. 199
- A.4 Eigenvalues and Eigenvectors p. 200
- Index p. 203
