

Table of Contents

- Chapter 1 Basic Considerations p. 3
 - 1.1 Introduction p. 4
 - 1.2 Dimensions, Units, and Physical Quantities p. 4
 - 1.3 Continuum View of Gases and Liquids p. 8
 - 1.4 Pressure and Temperature Scales p. 11
 - 1.5 Fluid Properties p. 14
 - 1.6 Conservation Laws p. 23
 - 1.7 Thermodynamic Properties and Relationships p. 24
 - 1.8 Summary p. 30
 - Problems p. 31
- Chapter 2 Fluid Statics p. 39
 - 2.1 Introduction p. 40
 - 2.2 Pressure at a Point p. 40
 - 2.3 Pressure Variation p. 41
 - 2.4 Fluids at Rest p. 43
 - 2.5 Linearly Accelerating Containers p. 67
 - 2.6 Rotating Containers p. 69
 - 2.7 Summary p. 72
 - Problems p. 73
- Chapter 3 Introduction to Fluids in Motion p. 87
 - 3.1 Introduction p. 88
 - 3.2 Description of Fluid Motion p. 88
 - 3.3 Classification of Fluid Flows p. 100
 - 3.4 The Bernoulli Equation p. 107
 - 3.5 Summary p. 116
 - Problems p. 117
- Chapter 4 The Integral forms of the Fundamental Laws p. 127
 - 4.1 Introduction p. 128
 - 4.2 The Three Basic Laws p. 128
 - 4.3 System-to-Control-Volume Transformation p. 132
 - 4.4 Conservation of Mass p. 137
 - 4.5 Energy Equation p. 144
 - 4.6 Momentum Equation p. 157
 - 4.7 Moment-of-Momentum Equation p. 176
 - 4.8 Summary p. 179
 - Problems p. 181
- Chapter 5 The Differential forms of the Fundamental Laws p. 203
 - 5.1 Introduction p. 204
 - 5.2 Differential Continuity Equation p. 205
 - 5.3 Differential Momentum Equation p. 210
 - 5.4 Differential Energy Equation p. 223
 - 5.5 Summary p. 229
 - Problems p. 231
- Chapter 6 Dimensional Analysis and Similitude p. 237

- 6.1 Introduction p. 238
- 6.2 Dimensional Analysis p. 239
- 6.3 Similitude p. 248
- 6.4 Normalized Differential Equations p. 258
- 6.5 Summary p. 262
- Problems p. 263
- Chapter 7 Internal Flows p. 271
- 7.1 Introduction p. 272
- 7.2 Entrance Flow and Developed Flow p. 272
- 7.3 Laminar Flow in a Pipe p. 274
- 7.4 Laminar Flow between Parallel Plates p. 281
- 7.5 Laminar Flow between Rotating Cylinders p. 288
- 7.6 Turbulent Flow in a Pipe p. 292
- 7.7 Uniform Turbulent Flow in Open Channels p. 325
- 7.8 Summary p. 329
- Problems p. 330
- Chapter 8 External Flows p. 345
- 8.1 Introduction p. 346
- 8.2 Separation p. 350
- 8.3 Flow Around Immersed Bodies p. 352
- 8.4 Lift and Drag on Airfoils p. 367
- 8.5 Potential Flow Theory p. 372
- 8.6 Boundary Layer Theory p. 385
- 8.7 Summary p. 409
- Problems p. 410
- Chapter 9 Compressible Flow p. 425
- 9.1 Introduction p. 426
- 9.2 Speed of Sound and the Mach Number p. 427
- 9.3 Isentropic Nozzle Flow p. 431
- 9.4 Normal Shock Wave p. 442
- 9.5 Shock Waves in Converging-Diverging Nozzles p. 450
- 9.6 Vapor Flow through a Nozzle p. 455
- 9.7 Oblique Shock Wave p. 457
- 9.8 Isentropic Expansion Waves p. 462
- 9.9 Summary p. 466
- Problems p. 467
- Chapter 10 Flow in Open Channels p. 475
- 10.1 Introduction p. 476
- 10.2 Open-Channel Flows p. 477
- 10.3 Uniform Flow p. 480
- 10.4 Energy Concepts in Open-Channel Flow p. 486
- 10.5 Momentum Concepts in Open-Channel Flow p. 500
- 10.6 Nonuniform, Gradually Varied Flow p. 512
- 10.7 Numerical Analysis of Water Surface Profiles p. 520
- 10.8 Summary p. 530
- Problems p. 531

- Chapter 11 Flows in Piping Systems p. 545
- 11.1 Introduction p. 546
- 11.2 Losses in Piping Systems p. 546
- 11.3 Simple Pipe Systems p. 552
- 11.4 Analysis of Pipe Networks p. 563
- 11.5 Unsteady Flow in Pipelines p. 576
- 11.6 Summary p. 584
- Problems p. 585
- Chapter 12 Turbomachinery p. 601
- 12.1 Introduction p. 602
- 12.2 Turbopumps p. 602
- 12.3 Dimensional Analysis and Similitude for Turbomachinery p. 620
- 12.4 Use of Turbopumps in Piping Systems p. 630
- 12.5 Turbines p. 636
- 12.6 Summary p. 651
- Problems p. 652
- Chapter 13 Measurements in Fluid Mechanics p. 661
- 13.1 Introduction p. 662
- 13.2 Measurement of Local Flow Parameters p. 662
- 13.3 Flow Rate Measurement p. 670
- 13.4 Flow Visualization p. 679
- 13.5 Data Acquisition and Analysis p. 687
- 13.6 Summary p. 699
- Problems p. 699
- Chapter 14 Environmental Fluid Mechanics p. 703
- 14.1 Introduction p. 704
- 14.2 Transport Processes in Fluids p. 704
- 14.3 Fundamental Equations of Mass and Heat Transport p. 709
- 14.4 Turbulent Transport p. 723
- 14.5 Evaluating the Transport Coefficients in the Environment p. 736
- 14.6 Summary p. 746
- Problems p. 747
- Chapter 15 Computational Fluid Dynamics p. 753
- 15.1 Introduction p. 754
- 15.2 An Overview of Finite-Difference and Finite-Volume Methods p. 754
- 15.3 Examples of Simple Finite-Difference Methods p. 755
- 15.4 Examples of Simple Finite-Volume Methods p. 766
- 15.5 Other Considerations p. 769
- 15.6 Grid Generation p. 776
- 15.7 Methods for the Compressible Navier-Stokes Equations p. 791
- 15.8 Methods for the Incompressible Navier-Stokes Equations p. 794
- 15.9 Closing Remarks p. 795
- References p. 796
- Problems p. 797
- Appendix p. 800
- A. Units and Conversions and Vector Relationships p. 801

- B. Fluid Properties p. 803
- C. Properties of Areas and Volumes p. 809
- D. Compressible-Flow Tables for Air p. 810
- E. Numerical Solutions for Chapter 10 p. 819
- F. Numerical Solutions for Chapter 11 p. 826
- Bibliography p. 841
- References p. 841
- General Interest p. 842
- Answers to Selected Problems p. 844
- Index p. 853
- Credits p. 863
