

- Introduction: An Invitation to Statistics p. 1
- The Population and the Sample p. 2
- Descriptive and Inferential Statistics p. 3
- Achieving the Objective of Inferential Statistics: The Necessary Steps p. 4
- 1 Describing Data with Graphs p. 7
  - 1.1 Variables and Data p. 8
  - 1.2 Types of Variables p. 9
  - 1.3 Graphs for Categorical Data p. 11
  - 1.4 Graphs for Quantitative Data p. 17
  - 1.5 Relative Frequency Histograms p. 23
- 2 Describing Data with Numerical Measures p. 50
  - 2.1 Describing a Set of Data with Numerical Measures p. 51
  - 2.2 Measures of Center p. 51
  - 2.3 Measures of Variability p. 57
  - 2.4 On the Practical Significance of the Standard Deviation p. 63
  - 2.5 A Check on the Calculation of  $s$  p. 67
  - 2.6 Measures of Relative Standing p. 73
  - 2.7 The Five-Number Summary and the Box Plot p. 76
- 3 Describing Bivariate Data p. 93
  - 3.1 Bivariate Data p. 94
  - 3.2 Graphs for Qualitative Variables p. 94
  - 3.3 Scatterplots for Two Quantitative Variables p. 98
  - 3.4 Numerical Measures for Quantitative Bivariate Data p. 100
- 4 Probability and Probability Distributions p. 119
  - 4.1 The Role of Probability in Statistics p. 120
  - 4.2 Events and the Sample Space p. 120
  - 4.3 Calculating Probabilities Using Simple Events p. 123
  - 4.4 Useful Counting Rules (Optional) p. 129
  - 4.5 Event Relations and Probability Rules p. 136
  - 4.6 Conditional Probability, Independence, and the Multiplicative Rule p. 140
  - 4.7 Bayes' Rule (Optional) p. 149
  - 4.8 Discrete Random Variables and Their Probability Distributions p. 154
- 5 Several Useful Discrete Distributions p. 174
  - 5.1 Introduction p. 175
  - 5.2 The Binomial Probability Distribution p. 175
  - 5.3 The Poisson Probability Distribution p. 187
  - 5.4 The Hypergeometric Probability Distribution p. 191
- 6 The Normal Probability Distribution p. 205
  - 6.1 Probability Distributions for Continuous Random Variables p. 206
  - 6.2 The Normal Probability Distribution p. 208
  - 6.3 Tabulated Areas of the Normal Probability Distribution p. 210
  - 6.4 The Normal Approximation to the Binomial Probability Distribution (Optional) p. 220
- 7 Sampling Distributions p. 236
  - 7.1 Introduction p. 237

- 7.2 Sampling Plans and Experimental Designs p. 237
- 7.3 Statistics and Sampling Distributions p. 241
- 7.4 The Central Limit Theorem p. 243
- 7.5 The Sampling Distribution of the Sample Mean p. 247
- 7.6 The Sampling Distribution of the Sample Proportion p. 253
- 7.7 A Sampling Application: Statistical Process Control (Optional) p. 258
- 8 Large-Sample Estimation p. 274
- 8.1 Where We've Been p. 275
- 8.2 Where We're Going--Statistical Inference p. 275
- 8.3 Types of Estimators p. 276
- 8.4 Point Estimation p. 277
- 8.5 Interval Estimation p. 284
- 8.6 Estimating the Difference between Two Population Means p. 294
- 8.7 Estimating the Difference between Two Binomial Proportions p. 299
- 8.8 One-Sided Confidence Bounds p. 303
- 8.9 Choosing the Sample Size p. 305
- 9 Large-Sample Tests of Hypotheses p. 320
- 9.1 Testing Hypotheses about Population Parameters p. 321
- 9.2 A Statistical Test of Hypothesis p. 321
- 9.3 A Large-Sample Test about a Population Mean p. 324
- 9.4 A Large-Sample Test of Hypothesis for the Difference between Two Population Means p. 337
- 9.5 A Large-Sample Test of Hypothesis for a Binomial Proportion p. 343
- 9.6 A Large-Sample Test of Hypothesis for the Difference between Two Binomial Proportions p. 348
- 9.7 Some Comments on Testing Hypotheses p. 353
- 10 Inference from Small Samples p. 362
- 10.1 Introduction p. 363
- 10.2 Student's t Distribution p. 363
- 10.3 Small-Sample Inferences Concerning a Population Mean p. 367
- 10.4 Small-Sample Inferences for the Difference between Two Population Means: Independent Random Samples p. 375
- 10.5 Small-Sample Inferences for the Difference between Two Means: A Paired-Difference Test p. 386
- 10.6 Inferences Concerning a Population Variance p. 394
- 10.7 Comparing Two Population Variances p. 401
- 10.8 Revisiting the Small-Sample Assumptions p. 409
- 11 The Analysis of Variance p. 426
- 11.1 The Design of an Experiment p. 427
- 11.2 What Is an Analysis of Variance? p. 428
- 11.3 The Assumptions for an Analysis of Variance p. 428
- 11.4 The Completely Randomized Design: A One-Way Classification p. 429
- 11.5 The Analysis of Variance for a Completely Randomized Design p. 430
- 11.6 Ranking Population Means p. 442

- 11.7 The Randomized Block Design: A Two-Way Classification p. 445
- 11.8 The Analysis of Variance for a Randomized Block Design p. 446
- 11.9 The a x b Factorial Experiment: A Two-Way Classification p. 458
- 11.10 The Analysis of Variance for an a x b Factorial Experiment p. 459
- 11.11 Revisiting the Analysis of Variance Assumptions p. 467
- 11.12 A Brief Summary p. 470
- 12 Linear Regression and Correlation p. 483
- 12.1 Introduction p. 484
- 12.2 A Simple Linear Probabilistic Model p. 484
- 12.3 The Method of Least Squares p. 486
- 12.4 An Analysis of Variance for Linear Regression p. 489
- 12.5 Testing the Usefulness of the Linear Regression Model p. 494
- 12.6 Diagnostic Tools for Checking the Regression Assumptions p. 502
- 12.7 Estimation and Prediction Using the Fitted Line p. 506
- 12.8 Correlation Analysis p. 513
- 13 Multiple Regression Analysis p. 532
- 13.1 Introduction p. 533
- 13.2 The Multiple Regression Model p. 533
- 13.3 A Multiple Regression Analysis p. 534
- 13.4 A Polynomial Regression Model p. 540
- 13.5 Using Quantitative and Qualitative Predictor Variables in a Regression Model p. 548
- 13.6 Testing Sets of Regression Coefficients p. 556
- 13.7 Interpreting Residual Plots p. 559
- 13.8 Stepwise Regression Analysis p. 560
- 13.9 Misinterpreting a Regression Analysis p. 561
- 13.10 Steps to Follow When Building a Multiple Regression Model p. 563
- 14 Analysis of Categorical Data p. 575
- 14.1 A Description of the Experiment p. 576
- 14.2 Pearson's Chi-Square Statistic p. 577
- 14.3 Testing Specified Cell Probabilities: The Goodness-of-Fit Test p. 578
- 14.4 Contingency Tables: A Two-Way Classification p. 582
- 14.5 Comparing Several Multinomial Populations: A Two-Way Classification with Fixed Row or Column Totals p. 590
- 14.6 The Equivalence of Statistical Tests p. 594
- 14.7 Other Applications of the Chi-Square Test p. 595
- 15 Nonparametric Statistics p. 610
- 15.1 Introduction p. 611
- 15.2 The Wilcoxon Rank Sum Test: Independent Random Samples p. 611
- 15.3 The Sign Test for a Paired Experiment p. 620
- 15.4 A Comparison of Statistical Tests p. 625
- 15.5 The Wilcoxon Signed-Rank Test for a Paired Experiment p. 626
- 15.6 The Kruskal-Wallis H Test for Completely Randomized Designs p. 632
- 15.7 The Friedman F[subscript r] Test for Randomized Block Designs p. 638
- 15.8 Rank Correlation Coefficient p. 643

- 15.9 Summary p. 650
- Appendix I p. 663
- Table 1 Cumulative Binomial Probabilities p. 664
- Table 2 Cumulative Poisson Probabilities p. 670
- Table 3 Areas under the Normal Curve p. 672
- Table 4 Critical Values of  $t$  p. 675
- Table 5 Critical Values of Chi-Square p. 676
- Table 6 Percentage Points of the F Distribution p. 678
- Table 7 Critical Values of  $T$  for the Wilcoxon Rank Sum Test,  $n_1$  [less than or equal]  $n_2$  p. 686
- Table 8 Critical Values of  $T$  for the Wilcoxon Signed-Rank Test,  $n = 5(1)50$  p. 688
- Table 9 Critical Values of Spearman's Rank Correlation Coefficient for a One-Tailed Test p. 689
- Table 10 Random Numbers p. 690
- Table 11 Percentage Points of the Studentized Range,  $q_{\alpha}(k, df)$  p. 692
- Answers to Selected Exercises p. 696
- Index p. 715
- Credits p. 719
