

- Chapter 1 Introduction and Overview p. 1
- 1.1 Why Simulate Mechanisms? p. 1
- 1.2 Kinematic Simulations p. 2
- 1.3 Dynamic Simulation of Mechanisms p. 3
- 1.4 Summary p. 4
- Chapter 2 Vector Loop and Vector Chain Equations p. 5
- 2.1 Introduction p. 5
- 2.2 The Planar Vector p. 5
- 2.3 Single Loop Equations p. 6
- 2.4 Derivatives of Vectors p. 8
- Example 2-1 p. 10
- 2.5 Other Common Mechanisms p. 11
- 2.6 Vector Chains p. 11
- 2.6.1 Two-Link Planar Robot p. 13
- 2.6.2 Vector Chains to Describe Motion of an Arbitrary Point p. 14
- 2.7 Summary p. 16
- Chapter 2 Problems p. 16
- Chapter 3 Solutions of the Position Problem p. 18
- 3.1 Overview p. 18
- 3.2 Numerical Solutions of Nonlinear Algebraic Equations p. 18
- 3.3 The Position Problem of a Four-Bar Linkage p. 20
- 3.4 Matlab Solution of the Position Problem of a Four-Bar Linkage p. 21
- 3.5 Position Solutions and Initial Guesses p. 23
- Example 3-1 p. 24
- 3.6 Summary p. 27
- Chapter 3 Problems p. 27
- Chapter 4 Kinematic Simulations Using Simulink p. 28
- 4.1 What Is a Kinematic Simulation? p. 28
- 4.2 Velocity Solution via Kinematic Simulation p. 28
- 4.2.1 Vector Loop Equations for the Slider Crank p. 28
- 4.2.2 Simulink Simulation of the Slider-Crank Kinematics p. 30
- 4.2.3 Establishing Initial Conditions p. 33
- 4.2.4 Simulation Results p. 35
- 4.3 Acceleration Solution via Kinematic Simulation p. 38
- 4.3.1 Including Acceleration in the Simulation p. 38
- 4.3.2 Running the Slider-Crank Simulation p. 40
- Example 4-1 p. 40
- Example 4-2 p. 41
- 4.4 The Consistency Check p. 44
- 4.5 Kinematic Simulation of a Four-Bar Mechanism p. 46
- Example 4-3 p. 48
- 4.6 Summary p. 51
- Chapter 4 Problems p. 51
- Chapter 5 Introducing Dynamics p. 53
- 5.1 Overview p. 53
- 5.2 Step 1: Simulating the Slider on Inclined Plane p. 53

- 5.3 Step 2: Adding the Pendulum p. 56
- 5.4 Step 3: Assembling the Matrix Equation p. 58
- 5.5 Step 4: Creating a Dynamic Simulation p. 58
- 5.6 Step 5: Setting Initial Conditions and Running Simulation p. 60
- 5.7 Summary p. 61
- Chapter 5 Problems p. 62
- Chapter 6 The Simultaneous Constraint Method p. 65
- 6.1 Introduction p. 65
- 6.2 Description of the Approach p. 65
- 6.2.1 Force Equation p. 66
- 6.2.2 Vector Loop Equations p. 67
- 6.2.3 Vector Equations for COM Accelerations p. 67
- 6.2.4 Implementation of the Dynamic Simulation p. 68
- 6.3 Application of Simultaneous Constraint Method for the Slider Crank p. 69
- 6.3.1 The Force Equations p. 69
- 6.3.2 The Vector Loop Equations p. 71
- 6.3.3 Center-of-Mass Accelerations p. 71
- 6.3.4 Assembling the System of Equations p. 72
- 6.4 Dynamic Simulation of the Slider Crank p. 73
- 6.5 Simulation Studies of the Slider Crank p. 76
- 6.6 Summary p. 80
- Chapter 6 Problems p. 80
- Chapter 7 Two-Link Planar Robot p. 82
- 7.1 Overview p. 82
- 7.2 Vector Equations p. 82
- 7.3 Dynamic Equations p. 83
- 7.4 The Simultaneous Constraint Matrix p. 85
- 7.5 Dynamic Simulation p. 86
- 7.6 Robot Coordinate Control p. 90
- 7.7 Summary p. 90
- Chapter 7 Problems p. 90
- Chapter 8 Simulating Mechanisms That Change p. 91
- 8.1 The Geneva Mechanism p. 91
- 8.2 Summary p. 97
- Chapter 9 The Trebuchet p. 98
- 9.1 Introduction p. 98
- 9.2 The Vector Loop p. 100
- 9.3 The Equations of Motion p. 101
- 9.4 The Matrix Equation p. 102
- 9.5 The Dynamic Simulation p. 103
- 9.6 Simulation Results p. 106
- 9.7 Summary p. 106
- Chapter 9 Problems p. 108
- Appendix Simulink Tutorial p. 109
- A.1 Starting Simulink p. 109
- A.2 Building a Simple Model p. 110

- A.3 Running the Simulation p. 113
- A.4 Simulation Run-Time Parameters p. 113
- A.5 Initial Conditions p. 115
- A.6 Multiplexing Signals p. 117
- A.7 Simulink and Matlab: Returning Data to the Workspace p. 119
- A.8 Using the Matlab plot command p. 121
- A.9 Using Matlab Functions in Simulink p. 123
- A.9.1 An Aside: Matlab Functions p. 123
- A.9.2 Calling Functions from Simulink p. 126
- A.9.3 Using Multiple Inputs and Outputs p. 128
- A.10 Concluding Remarks p. 133
- Index p. 135
