

- Introduction
  - What's New in the Second Edition
  - What This Book Is About
  - What's Different About This Book
  - Who This Book Is For
  - What You Need to Know Before You Read This Book
  - The Software You Need to Use This Book
  - How This Book Is Organized
  - Enjoy Yourself!
- 1 Overview
  - What Are Data Structures and Algorithms Good For? Overview of Data Structures
  - Overview of Algorithms
  - Some Definitions
  - Object-Oriented Programming
  - Software Engineering
  - Java for C++ Programmers
  - Java Library Data Structures
  - Summary
  - Questions
- 2 Arrays
  - The Array Workshop Applet
  - The Basics of Arrays in Java
  - Dividing a Program into Classes
  - Class Interfaces
  - The Ordered Workshop Applet
  - Java Code for an Ordered Array
  - Logarithms
  - Storing Objects
  - Big O Notation
  - Why Not Use Arrays for Everything
  - Summary
  - Questions
  - Experiments
  - Programming Projects
- 3 Simple Sorting
  - How Would You Do It
  - Bubble Sort
  - Selection Sort
  - Insertion Sort
  - Sorting Objects
  - Comparing the Simple Sorts
  - Summary
  - Questions
  - Experiments
  - Programming Projects
- 4 Stacks and Queues

- A Different Kind of Structure
- Stacks
- Queues
- Priority Queues
- Parsing Arithmetic Expressions
- Summary
- Questions
- Experiments
- Programming Projects
- 5 Linked Lists
- Links
- The Link List Workshop Applet
- A Simple Linked List
- Finding and Deleting Specified Links
- Double-Ended Lists
- Linked-List Efficiency
- Abstract Data Types
- Sorted Lists
- Doubly Linked Lists
- Iterators
- Summary
- Questions
- Experiments
- Programming Projects
- 6 Recursion
- Triangular Numbers
- Factorials
- Anagrams
- A Recursive Binary Search
- The Towers of Hanoi
- Mergesort
- Eliminating Recursion
- Some Interesting Recursive Applications
- Summary
- Questions
- Experiments
- Programming Projects
- 7 Advanced Sorting
- Shellsort
- Paartitioning
- Quicksort
- Radix Sort
- Summary
- Questions
- Experiments
- Programming Projects

- 8 Binary Trees
  - Why Use Binary Trees? Tree Terminology
  - An Analogy
  - How Do Binary Search Trees Work
  - Finding a Node
  - Inserting a Node
  - Traversing the Tree
  - Finding Maximum and Minimum Values
  - Deleting a Node
  - The Efficiency of Binary Trees
  - Trees Represented as Arrays
  - Duplicate Keys
  - The Complete tree
  - Java Program
  - The Huffman Code
  - Summary
  - Questions
  - Experiments
  - Programming Projects
- 9 Red-Black Trees
  - Our Approach to the Discussion
  - Balanced and Unbalanced Trees
  - Using the RBTree Workshop Applet
  - Experimenting with the Workshop Applet
  - Rotations
  - Inserting a New Node
  - Deletion
  - The Efficiency of Red-Black Trees
  - Red-Black Tree Implementation
  - Other Balanced Trees
  - Summary
  - Questions
  - Experiments
- 10 2-3-4 Trees and External Storage
  - Introduction to 2-3-4 Trees
  - The Tree234 Workshop Applet
  - Java Code for a 2-3-4 Tree
  - 2-3-4 Trees and Red-Black Trees
  - Efficiency of 2-3-4 Trees
  - 2-3 Trees
  - External Storage
  - Summary
  - Questions
  - Experiments
  - Programming Projects
- 11 Hash Tables

- Introduction to Hashing
- Open Addressing
- Separate Chaining
- Hash Functions
- Hashing Efficiency
- Hashing and External Storage
- Summary
- Questions
- Experiments
- Programming Projects
- 12 Heaps
- Introduction to Heaps
- The Heap Workshop Applet
- Java Code fo Heaps
- A Tree-based Heap
- Heapsort
- Summary
- Questions
- Experiments
- Programming Projects
- 13 Graphs
- Introduction to Graphs
- Searches
- Minimum Spanning Trees
- Topological Sorting with Directed Graphs
- Connectivity in Directed Graphs
- Summary
- Questions
- Experiments
- Programming Projects
- 14 Weighted Graphs
- Minimum Spanning Tree with Weighted Graphs
- The Shortest-Path Problem
- The All-Pairs Shortest-Path Problem
- Efficien
