

## Table of Contents

- 1. Exercise Testing and Interpretation: An Overview p. 1
- Why Measure Gas Exchange to Evaluate Cardiovascular Function and Cellular Respiration? p. 2
- Cardiac Stress Test and Pulmonary Stress Test: Nomenclature Fallacies p. 2
- Cell Respiration and Bioenergetics p. 3
- Normal Coupling of External to Cellular Respiration p. 4
- Quantifying State and Time Course of Cellular Respiration from Measurements of External Respiration p. 4
- Patterns of Change in External Respiration ( $\dot{V}O_2$  Uptake and  $\dot{V}CO_2$  Output) as Related to Function, Fitness and Disease p. 6
- Factors Limiting Exercise p. 6
- Fatigue p. 6
- Dyspnea p. 7
- Pain p. 7
- Evidence of Systemic Dysfunction Uniquely Revealed by Integrative Cardiopulmonary Exercise Testing p. 7
- 2. Physiology of Exercise p. 10
- Skeletal Muscle p. 11
- Mechanical Properties and Fiber Types p. 11
- Energetics p. 12
- Oxygen Cost of Work p. 17
- Work Efficiency p. 18
- $\dot{V}O_2$  Non-Steady State p. 19
- Lactate Increase p. 19
- Lactate Increase as Related to Work Rate p. 19
- Lactate Increase as Related to Time p. 19
- Lactate Increase in Response to Increasing Work Rate p. 20
- Mechanisms of Lactate Increase p. 21
- Buffering the Exercise-induced Lactic Acidosis p. 7
- The Anaerobic Threshold (AT) Concept p. 29
- Identifying AT by Gas Exchange p. 30
- Altered Physiological Responses to Exercise above the AT p. 33
- Anaerobic, Lactate and Lactic Acidosis Thresholds p. 39
- Metabolic-Cardiovascular-Ventilatory Coupling p. 40
- Cellular Respiration and High Energy Phosphate Regeneration p. 40
- Cardiovascular Coupling to Metabolism: Muscle  $\dot{V}O_2$  Supply p. 40
- Ventilatory Coupling to Metabolism p. 42
- Effect of Dietary Substrate p. 46
- Control of Breathing p. 47
- Overview p. 47
- Acid-Base Regulation p. 47
- Physical Factors p. 48
- Reflexes Regulating Breathing During Exercise p. 48
- Gas Exchange Kinetics p. 52

- Oxygen Uptake Kinetics p. 52
- CO<sub>2</sub> Output Kinetics p. 55
- Summary p. 56
- 3. Measurements During Integrative Cardiopulmonary Exercise Testing p. 62
  - What Is an Integrative Cardiopulmonary Exercise Test? p. 63
  - When Should Integrative Cardiopulmonary Exercise Testing Be Used? p. 64
  - Measurements p. 64
    - Electrocardiogram p. 64
    - Maximal Oxygen Uptake (VO<sub>2</sub>max) Maximum Oxygen Uptake (Peak VO<sub>2</sub>) p. 65
    - Oxygen Uptake and Work Rate p. 67
    - Pattern of Work Rate Increase and the VO<sub>2</sub> Response p. 67
    - Upward Displacement of VO<sub>2</sub> as A Function of Work Rate p. 68
    - Cardiac Output and Stroke Volume p. 71
    - Anaerobic (Lactate, Lactic Acidosis) Threshold (AT, LT, LAT) p. 73
    - Heart Rate-Oxygen Uptake Relationship and Heart Rate Reserve p. 76
    - Oxygen Pulse (VO<sub>2</sub>/HR) and Stroke Volume p. 77
    - Arterial Blood Pressure p. 78
    - Breathing Reserve p. 79
    - Expiratory Flow Pattern p. 79
    - Tests of Uneven VA/Q p. 79
    - Arterial Bicarbonate and Acid-Base Response p. 83
    - Tidal Volume/Inspiratory Capacity Ratio (VT/IC) p. 84
    - Measurements Unique to Constant Work Rate Exercise Testing p. 84
    - Data Display and Interpretation p. 87
    - Summary p. 92
- 4. Pathophysiology of Disorders Limiting Exercise p. 95
  - Obesity p. 96
  - Peripheral Arterial Diseases p. 98
  - Heart Diseases p. 98
    - Coronary Artery Disease p. 99
    - Myopathic Heart Disease p. 100
    - Valvular Heart Disease p. 101
    - Congenital Heart Disease p. 101
  - Pulmonary Vascular Diseases p. 102
    - Causes of Increased Ventilation p. 102
    - Causes of Exercise Arterial Hypoxemia p. 102
    - Effect on Systemic Hemodynamics p. 103
  - Ventilatory Disorders p. 104
    - Obstructive Lung Diseases p. 104
    - Restrictive Lung Diseases p. 107
  - Chest Wall (Respiratory Pump) Disorders p. 109
  - Defects in Hemoglobin Content and Quality p. 109
    - Anemia p. 110
    - Left-shifted Oxyhemoglobin Dissociation Curve p. 110
    - Carboxyhemoglobinemia and Cigarette Smoking p. 110

- Chronic Metabolic Acidosis p. 110
- Muscle Disorders and Endocrine Abnormalities p. 111
- Psychogenic Causes of Exercise Limitation and Dyspnea p. 112
- Anxiety p. 112
- Poor Effort and Manipulated Exercise Performance p. 112
- Combinations of Defects p. 112
- Summary p. 113
- 5. Clinical Exercise Testing p. 115
  - Exercise Laboratory and Equipment p. 116
  - General (Laboratory) Environment p. 116
  - Measuring Gas Exchange p. 116
  - Measurement of Volume, Flow Rate, or Ventilation p. 117
  - Breathing Valves, Mouthpieces, and Masks p. 119
  - Gas Analyzers p. 119
  - Ergometers: Treadmills and Cycle p. 121
  - Electrocardiogram and Systemic Blood Pressure p. 123
  - Oximetry, Blood Sampling, and Arterial Catheters p. 124
  - Data Sampling and Computation p. 126
  - Validation and Maintenance p. 126
  - Preparing for the Exercise Test p. 127
  - Requesting the Test and Notifying the Patient p. 127
  - The Patient in the Exercise Laboratory p. 128
  - Performing the Exercise Test p. 129
  - Incremental Exercise Test to Symptom-Limit Maximum p. 130
  - Constant Work Rate Exercise Tests p. 133
  - Treadmill Test for Detecting Myocardial Ischemia p. 135
  - Arm Ergometry p. 137
  - Other Tests Suitable for Fitness or Serial Evaluations p. 137
  - Preparing the Report p. 138
  - Summary p. 138
- 6. Normal Values p. 143
  - Peak Oxygen Uptake p. 144
  - Age and Gender p. 144
  - Activity Level p. 144
  - Adults of Normal (Predicted) Body Weight p. 144
  - Overweight Patients p. 146
  - Underweight Patients p. 148
  - Children p. 148
  - Exercise Mode p. 148
  - Maximum Heart Rate and Heart Rate Reserve p. 150
  - Relationship of  $\dot{V}O_2$  and Heart Rate: The Maximum Oxygen Pulse p. 151
  - Brachial Artery Blood Pressure p. 152
  - Anaerobic (Lactate, Lactic Acidosis) Threshold p. 153
  - Oxygen Uptake-Work Rate Relationship p. 154
  - Breathing Reserve, Tidal Volume, and Breathing Frequency at Maximum Exercise p. 155

- Maximum Exercise Ventilation and Breathing Reserve p. 155
- Tidal Volume and Breathing Frequency p. 156
- Ventilatory Measures at the Anaerobic Threshold:  $VE/VCO_2$ ,  $VE/VO_2$ , and the Breathing Reserve Index p. 156
- Physiologic Dead Space/Tidal Volume Ratio p. 157
- Arterial and End-Tidal  $CO_2$  Tensions p. 159
- Arterial, Alveolar, and End-Tidal Oxygen Tensions and Arterial Oxyhemoglobin Saturation p. 160
- Femoral and Mixed Venous Values and Estimation of Cardiac Output p. 161
- Acid-Base Balance p. 162
- Summary p. 162
- 7. Principles of Interpretation: A Flow Chart Approach p. 165
  - Introduction to Flow Charts p. 166
  - Establishing the Pathophysiologic Basis of Exercise Intolerance p. 166
  - Maximum Exercise Capacity and Anaerobic Threshold (Flow Chart 1) p. 166
  - Exercise Intolerance with Normal Peak  $VO_2$  (Flow Chart 2) p. 167
  - Low Peak  $VO_2$  with Normal AT (Flow Chart 3) p. 169
  - Low Peak  $VO_2$  with Low AT (Flow Chart 4) p. 171
  - Low Peak  $VO_2$  with AT Not Determined (Flow Chart 5) p. 175
  - Summary p. 177
- 8. Clinical Applications of Cardiopulmonary Exercise Testing p. 178
  - Differential Diagnosis of Disorders Causing Exercise Intolerance p. 179
  - Pathophysiological Responses in Common Disorders p. 179
  - $O_2$  Uptake and  $CO_2$  Output as Related to Work-Rate p. 179
  - Heart Rate and  $VCO_2$  as a Function of  $VO_2$  p. 180
  - Heart Rate and  $O_2$  Pulse as a Function of Work Rate p. 185
  - VT as a Function of VE p. 185
  - VE as a Function of  $VCO_2$  p. 185
  - Ventilatory Equivalents for  $O_2$  and  $CO_2$  p. 185
  - Diagnoses Uniquely Made by Cardiopulmonary Exercise Testing p. 188
  - Development of Myocardial Ischemia with Myocardial Dyskinesia during Exercise p. 188
    - Chronic Heart Failure Due to Diastolic Dysfunction p. 188
    - Pulmonary Vascular Occlusive Disease without Pulmonary Hypertension p. 189
    - Patent Foramen Ovale with Development of a Right to Left Shunt during Exercise p. 189
  - Pulmonary Vascular Disease Limiting Exercise in COPD p. 191
  - Impaired Muscle Bioenergetic Function p. 191
  - Psychogenic Dyspnea and Behavioral (Anxiety or Malingering) Causes of Exercise Intolerance p. 191
    - Grading Severity of Heart Disease p. 192
    - Estimating Peak Cardiac Output During Exercise from  $O_2$  Uptake at Peak  $VO_2$  p. 192
    - Cardiac Output Estimated by the Direct Fick Method p. 192
    - Behavior of Changing Arterial-Venous  $O_2$  Difference during Exercise p. 193

- Initial and Final Estimate of  $C(a - v)O_2$  p. 193
- Examples of Estimating  $C(a - v)O_2$  p. 194
- Short-Cut Estimate of Stroke Volume from  $O_2$  Pulse p. 194
- Prioritizing Patients for Heart Transplantation p. 194
- Preoperative Evaluation of Surgical Risk p. 196
- Thoracotomy p. 197
- Abdominal Surgery p. 197
- Analysis p. 198
- Measuring Impairment for Disability Evaluation p. 198
- Impairment and Disability p. 198
- Problems in Assessing Impairment from Resting Measures Only p. 198
- Exercise Testing and Impairment Evaluation p. 199
- $O_2$  Cost of Work p. 200
- Analysis p. 201
- Exercise Rehabilitation p. 201
- Physiological Basis of Exercise Rehabilitation p. 201
- Exercise Rehabilitation in Heart Disease p. 204
- Exercise Rehabilitation in Chronic Obstructive Pulmonary Disease p. 204
- Assessing Effectiveness of Treatment p. 205
- Screening for Development of Disease in High Risk Patients p. 208
- Graded Exercise Testing and the Athlete p. 209
- Summary p. 210
- 9. Case Presentations p. 215
- Appendices
- A. Symbols and Abbreviations p. 523
- B. Glossary p. 525
- C. Calculations, Formulae, and Examples p. 531
- D. Placement of a Brachial Artery Catheter p. 541
- E. Tables and Nomogram p. 543
- Index p. 546
